**Hydrodynamic and Optical Waves: A Common Approach  
for Unidimensional Propagation** ..... 1  
Miguel Onorato, Fabio Baronio, Matteo Conforti,  
Amin Chabchoub, Pierre Suret, and Stephane Randoux

1 Introduction ..... 2

2 Normal Variables in the Wave Equation ..... 2

3 Water Waves in One Horizontal Dimension and Their  
Hamiltonian Formulation ..... 5

    3.1 Surface Gravity Waves: The Canonical Transformation ..... 7

    3.2 The NLS Equation for Surface Gravity Waves in Infinite  
        Water Depth ..... 9

4 Optical Waves in Normal Variables ..... 11

    4.1 Three-Wave Interactions:  $\chi^{(2)}$  Media ..... 13

    4.2 Four-Wave Interactions in Pure  $\chi^{(3)}$  Media ..... 16

    4.3 Four-Wave Mixing in a  $\chi^{(2)}$  and  $\chi^{(3)}$  Medium ..... 18

    4.4 The Stokes Expansion in Optical Waves ..... 19

5 Discussion and Conclusions ..... 20

References ..... 21

**Integrability in Action: Solitons, Instability and Rogue Waves** ..... 23  
Antonio Degasperis and Sara Lombardo

1 Introduction to Integrability and Solitons ..... 23

2 Integrability in Action: The NLS Equation as Study Case ..... 28

    2.1 Conservation Laws from the Lax Pair ..... 28

    2.2 The Initial Value Problem and Particular Solutions ..... 31

3 NLS Equation: Linear Instability and Rogue Waves ..... 36

4 Wave Coupling: Integrability and Rogue Waves ..... 40

5 Integrability in Action: Beyond the NLS Model ..... 46

References ..... 48

<b>Hydrodynamic Envelope Solitons and Breathers</b> .....	55
Amin Chabchoub, Miguel Onorato, and Nail Akhmediev	
1 Introduction .....	55
2 Weakly Nonlinear Water Waves Theory .....	57
2.1 Stokes Waves and Modulation Instability .....	57
2.2 The Nonlinear Schrödinger Equation (NLSE) .....	58
3 Exact NLSE Solutions and Their Physical Interpretation .....	59
4 Experimental Setup .....	64
5 Observations of Envelope Solitons on the Water Surface .....	65
5.1 Dark Solitons .....	66
5.2 Bright Solitons .....	67
5.3 Multi-Soliton Solutions .....	68
6 Observations of Breathers on a Finite Background .....	71
6.1 Fundamental Periodic Breathers .....	71
6.2 Doubly-Localized Breathers .....	74
7 Discussions .....	79
References .....	81
<b>Experiments on Breathers in Nonlinear Fibre Optics</b> .....	89
Bertrand Kibler, Julien Fatome, Christophe Finot, and Guy Millot	
1 Introduction .....	89
2 Nonlinear Schrödinger Breathers .....	91
2.1 First-Order Breathers .....	91
2.2 Second-Order Breathers .....	96
3 Experimental Configurations in Nonlinear Fiber Optics .....	98
3.1 Experimental Setups .....	99
3.2 Impact of Initial Conditions .....	101
4 Experimental Results .....	105
4.1 First-Order Breathers .....	106
4.2 Higher-Order Breathers .....	109
5 Conclusions .....	112
References .....	112
<b>Hamiltonian Description of Ocean Waves and Freak Waves</b> .....	117
Peter A.E.M. Janssen	
1 Introduction .....	117
2 The Problem .....	118
3 Brief History .....	119
4 Hamiltonian Formulation .....	119
5 The Instability of Finite-Amplitude Deep-Water Waves .....	123
5.1 Narrow-Band Wave Train in 1D .....	128
5.2 Properties of 1D NLS .....	129
5.3 NLS and Fermi-Pasta-Ulam Recurrence .....	130
5.4 Narrow-Band Wave Train in 2D .....	131
5.5 Nomenclature .....	132

6	Ocean Waves and Statistical Mechanics .....	133
6.1	A Generation Mechanism for Freak Waves .....	133
6.2	Stochastic Approach: Free Waves .....	134
6.3	Stochastic Approach: Bound Waves .....	138
6.4	Results for Skewness and Kurtosis .....	140
6.5	Comparison with Monte Carlo Simulations .....	143
7	Comparison with Observations from Wave Tanks .....	146
8	Operational Implementation and Verification .....	149
8.1	Validation .....	151
8.2	A Special Case: The Draupner Freak Wave .....	153
9	Conclusions .....	155
	References .....	156
	<b>Modelling Transient Sea States with the Generalised Kinetic Equation ...</b>	<b>159</b>
	Sergei Y. Annenkov and Victor I. Shrira
