 Part I Fundamental Operation Modes		
2	Triboelectric Nanogenerator: Vertical Contact-Separation Mode	23
2.1	Basic Principle	23
2.2	Fundamental Theory	25
2.3	Basic Device Structures	29
2.3.1	Spacer Structure	29
2.3.2	Arch-Shaped Structure	32
2.3.3	Spring-Assisted Separation Structure	36
2.3.4	Multiple Layer Integration	40
2.3.5	Microcavity-Nanoparticle Assembled Structure	41
2.4	Summary	46
	References	46

3	Triboelectric Nanogenerator: Lateral Sliding Mode	49
3.1	Basic Principle	49
3.2	Fundamental Theory	50
3.2.1	Sliding-Mode TENG with Only One Unit	50
3.2.2	Grating TENGs	54
3.3	Basic Device Structures	64
3.3.1	Plain-Sliding Structure	64
3.3.2	Linear-Grating Structure	67
3.3.3	Rotation-Disk Structure	74
3.3.4	Rotation-Cylinder Structure	79
3.3.5	Case-Encapsulated Structure	82
3.3.6	Liquid-Metal Structure	84
3.4	Energy Conversion Efficiency	87
3.4.1	Solid-Solid	87
3.4.2	Solid-Liquid	88
3.5	Summary	89
	References	90
4	Triboelectric Nanogenerator: Single-Electrode Mode	91
4.1	Basic Principle	91
4.2	Fundamental Theory	92
4.2.1	Basic Working Principle and Electrostatic Shield Effect	92
4.2.2	Effect of Electrode Gap Distance	96
4.2.3	Effect of Area Size (Length)	97
4.2.4	Effect of Spacing Between Units for Scale up	99
4.3	Basic Device Structures	100
4.3.1	Contact-Separation Structure	100
4.3.2	Lateral Sliding Structure	104
4.4	Summary	106
	References	106
5	Triboelectric Nanogenerator: Freestanding Triboelectric-Layer Mode	109
5.1	Sliding Freestanding Triboelectric-Layer TENG	109
5.1.1	Basic Principle	109
5.1.2	Fundamental Theory	115
5.2	Contact Freestanding Triboelectric-Layer TENG	122
5.2.1	Basic Principle	123
5.2.2	Fundamental Theory	127
5.3	Advanced Device Structures	132
5.3.1	Linear-Grating Structure	132
5.3.2	Rotation-Disk Structure I	138
5.3.3	Rotation-Disk Structure II	141

5.4	Rolling Friction Operation Mode	145
5.5	Energy Conversion Efficiency	150
5.6	Summary	152

7.4.1	Measurement of Triboelectric Surface Charge Density	199
7.4.2	Quantified Triboelectric Series Based on Normalized Charge Density and Dimensionless Material Figure-of-Merit	201
7.5	Summary	203
	References	203

Part II Applications as a Sustainable Power Source

8	Harvesting Body Motion Energy	207
8.1	Integrated Structure Triboelectric Nanogenerators	207
8.2	Fabric Based Triboelectric Nanogenerators	212
8.2.1	Fiber Based Triboelectric Nanogenerators	212
8.2.2	Textile Based Triboelectric Nanogenerators	214
8.2.3	Fiber Based Hybrid Nanogenerators	219
8.3	Paper Based Triboelectric Nanogenerators	223
8.3.1	A Single Paper Based Triboelectric Nanogenerators	223
8.3.2	A Paper Origami Based Triboelectric Nanogenerators	225
8.4	Human Skin Based Single-Electrode Mode Triboelectric Nanogenerators	229
8.5	Sliding Freestanding-Triboelectric-Layer Mode Triboelectric Nanogenerators	232
8.6	Summary	234
	References	235
9	Harvesting Vibration Energy	237
9.1	Vibration Energy Harvesting with Basic Operation Modes	237
9.1.1	Vertical Contact-Separation Mode	237
9.1.2	Contact Single-Electrode Mode	240
9.1.3	Contact Freestanding-Triboelectric-Layer Mode	241
9.2	Vibration Energy Harvesting with Advanced Structural Designs	242
9.2.1	Multi-directional Vibration Energy Harvesting	242
9.2.2	Multi-layer Structural Design	245
9.2.3	Liquid-Metal Based Structural Design	247
9.3	Sound Wave Energy Harvesting	249
9.3.1	Organic Film Based TENG	249
9.3.2	Rollable Paper Based TENG	252
9.4	Summary	255
	References	256
10	Harvesting Wind Energy	259
10.1	Wind Energy Harvesting Based on Rotational Structure	259
10.1.1	Rotational Sliding Freestanding-Triboelectric-Layer Mode Wind-Driven Triboelectric Nanogenerators	260
10.1.2	Other Rotational Structures for Wind Energy Harvesting	265
10.2	Wind Energy Harvesting Based on Flutter-Driven Triboelectrification	269
10.2.1	The First Flutter-Driven TENG for Wind Energy Harvesting	269

10.2.2	Elasto-Aerodynamics-Driven Triboelectric Nanogenerator	274
10.3	Summary	280
	References	281
11	Harvesting Large-Scale Blue Energy.	283
11.1	TENG for Water Wave Energy Harvesting	283
11.1.1	Liquid-Solid Electrification-Based TENG	283
11.1.2	TENG Based Hydrokinetics Energy Harvesting	291
11.1.3	Dual Mode TENG for Electrostatic and Mechanical Energies Harvesting	294
11.1.4	Fully Enclosed TENG for Water Wave Energy Harvesting.	296
11.2	Network of TENGs for Blue Energy Harvesting	300
11.3	Summary	304
	References	305
12	Hybrid Cell Composed of Triboelectric Nanogenerator	307
12.1	AC–AC Hybrid Cell.	308
12.1.1	Hybrid Electromagnetic and Triboelectric Nanogenerator	308
12.1.2	Hybrid Triboelectric-Piezoelectric/Pyroelectric Nanogenerator	319
12.2	AC–DC Hybrid Cell.	333
12.2.1	Hybrid Solar Cell and Triboelectric Nanogenerator.	333
12.2.2	Hybrid Thermoelectric Cell and Triboelectric Nanogenerator	341
12.2.3	Hybrid Electrochemical Cell and Triboelectric Nanogenerator	344
12.3	Summary	348
	References	348
13	Applications in Self-powered Systems and Processes	351
13.1	Integration of TENG with Energy Storage Units for Sustainably Driving Portable Electronics	351
13.1.1	Direct Integration and Transformer Integration.	351
13.1.2	Through Power Management Circuit Board.	359
13.2	TENG for Self-powered Electrochemical Applications	366
13.2.1	Self-powered Electrochemical Degradation	367
13.2.2	Self-powered Water Splitting.	370
13.2.3	Self-powered Anticorrosion	373
13.2.4	Self-powered Air Filtering.	376
13.2.5	Self-powered Electrochemical Recovery	381
13.2.6	Self-powered Electrochromic Device for Smart Window System.	384

13.3	TENG for Self-powered Biomedical Stimulation	387
13.3.1	In-Vivo Implanted TENG for Self-powered Pacemaker.	387
13.3.2	Implantable Self-powered Laser Cure System for Proliferation and Differentiation of Cells	390
13.4	Summary	394
	References	395

Part III Applications as Self-Powered Active Sensors

14	Self-powered Sensing for Human-Machine Interface	401
14.1	Self-powered Pressure/Touch Sensor	401
14.1.1	Contact-Separation Mode Self-powered Pressure Sensor	402
14.1.2	Single-Electrode Mode Self-powered Touch Sensor	409
14.1.3	Dual-Mode Ultrasensitive Self-powered Pressure Sensor	412
14.2	Self-powered Tactile Imaging	417
14.3	Self-powered Smart Keyboard	422
14.4	Summary	427
	References	428
15	Self-powered Sensing for Vibration and Biomedical Monitoring	431
15.1	Self-powered Vibration Sensor.	431
15.1.1	Position Tracking of the Vibration Source.	431
15.1.2	Vibration Amplitude Measurement	434
15.2	Self-powered Acoustic Sensor for Voice Recording	436
15.2.1	Helmholtz-Cavity-Based Acoustic Sensor	436
15.2.2	Ultrathin Paper-Based Acoustic Sensor	438
15.3	Self-powered Biomedical Monitoring	440
15.3.1	Eardrum Inspired Bionic Membrane Sensor.	440
15.3.2	Membrane-Based Triboelectric Sensor	450
15.4	Summary	453
	References	453
16	Self-powered Sensing for Tracking Moving Objects.	455
16.1	TENGs as Self-powered Linear Displacement Sensors	455
16.2	TENGs as Self-powered Active Rotation Sensors.	458
16.3	TENGs for Self-powered Tracking of a Moving Object	460
16.4	TENG as Self-powered Acceleration Sensors.	464
16.5	Summary	466
	References	467

17 Self-powered Sensing for Chemical and Environmental

Detection 469

17.1 Self-powered Chemical Sensors 469

17.2 Self-powered UV Sensors 475

17.3 Self-powered Environmental Monitoring 479

17.4 Summary 487
