

Contents

1	Electrostatic Field in a Vacuum	1
1.1	Electric Charge	2
1.2	Coulomb's Law	7
1.3	The Electrostatic Field	13
1.4	Calculating Electric Fields	16
1.5	Electrostatic Potential	19
1.6	Generating Electrostatic Potential Differences	22
1.7	Calculating Electrostatic Potentials	24
1.8	Measuring the Elementary Charge. Millikan's Experiment	27
1.9	Invariance of the Electric Charge	32
1.10	The Solid Angle	33
1.11	The Flux of E and the Gauss Theorem	36
1.12	Graphic Representation of the Electric Field	39
1.13	Applications of the Gauss Law	41
1.14	Discontinuities of the Electric Field	48
1.15	Poisson and Laplace Equations	50
1.16	The Electric Dipole	51
1.17	Dipole Approximation	56
	Summary	59
	Problems	59
2	Conductors in Equilibrium	61
2.1	Conductors	63
2.2	Conductors in Equilibrium	64
2.3	Surface Charges on a Conductor	69
2.4	Hollow Conductors	72
2.5	Equilibrium in an Electrostatic Field	76
2.6	Electrostatic Capacitance	77
2.7	Calculating Capacitances	83
2.8	Combining Capacitors	85
2.9	Electrostatic Induction Coefficients	87

2.10	Electrostatic Shield	88
2.11	The Method of Images	91
	Summary	93
	Problems	94
3	Electrostatic Energy	97
3.1	Energy of a System of Point Charges	98
3.2	Energy of a Continuous Charge Distribution	99
3.3	Energy of a System of Conductors	101
3.4	Energy Stored in a Capacitor	102
3.5	Energy in the Electrostatic Field	103
3.6	The Energy of a Point Charge	107
	Summary	110
	Problems	110
4	Dielectrics	113
4.1	Dielectric Constant	114
4.2	Polarization of a Dielectric	116
4.3	Uniform Polarization	117
4.4	Non-uniform Polarization	119
4.5	Electrostatic Equations in a Dielectric	122
4.6	Linear and Isotropic Dielectrics	126
4.7	Electronic and Orientation Polarization	128
4.8	Electric Field in Cavities in Dielectrics	133
4.9	Electrostatic Energy in a Dielectric	138
	Summary	144
	Problems	145
5	Electric Currents	147
5.1	Current Intensity and Current Density	148
5.2	Electric Charge Conservation	154
5.3	Ohm's Law	156
5.4	The British Association Ohm	160
5.5	Surface Currents	162
5.6	Energy Balance	164
5.7	Generators	165
5.8	Slow Capacitor Discharge	167
5.9	Circuits in a Steady Regime	169
5.10	Superconductivity	171
	Summary	174
	Problems	174
6	Magnetostatics	177
6.1	Preliminary Observations	179
6.2	Magnetic Field	181
6.3	Hall Effect	184

6.4	Motion of Charges in a Magnetic Field	185
6.5	Galvanometer	195
6.6	The Magnetic Field of Steady Currents	196
6.7	Applications of Ampère's Law	203
6.8	The Vector Potential	209
6.9	The Vector Potential in Simple Cases	212
6.10	The Ampère-Laplace Law	216
6.11	Examples of Magnetic Field Calculations	217
6.12	Force Between Two Straight Steady Currents and the Ampere	219
6.13	The Magnetic Dipole	220
6.14	Charge Densities in a Current-Carrying Wire	225
6.15	Properties of the Laws Under Rotations and Inversions of the Axes	229
6.16	Relativity of Electric and Magnetic Forces.	231
	Summary	237
	Problems	238
7	Electromagnetic Induction	241
7.1	The Flux Rule	242
7.2	Induced Electric Field. Faraday's Law	245
7.3	Exceptions to the Flux Rule.	249
7.4	Betatron	250
7.5	Felici's Law	253
7.6	Energy Balance	255
7.7	Eddy Currents	257
7.8	Mutual Induction	260
7.9	Self-induction	262
7.10	Inductive Phenomena in Electric Circuits.	266
7.11	Alternating Current Circuits.	269
7.12	Complex Impedance	273
7.13	Energy Balance in a Circuit.	279
	Summary	280
	Problems	280
8	Magnetic Energy	283
8.1	Energy of a Steady Current	284
8.2	Energy of a System of Steady Currents.	285
8.3	Energy of a Dipole.	286
8.4	Energy of the Magnetic Field.	290
	Summary	294
	Problems	294
9	Magnetic Properties of Matter	297
9.1	Elementary Observations.	298
9.2	Uniform Magnetization	300

9.3	Non-uniform Magnetization	303
9.4	Magnetic Field Equations in Matter	306
9.5	B and H Fields in Matter	309
9.6	Dia- and Para-magnetism. Microscopic Interpretation	314
9.7	Ferromagnetism	319
9.8	Uses of Ferromagnetism	323
9.9	Microscopic Interpretation of Ferromagnetism	327
9.10	Energy of Steady Currents in the Presence of Magnetic Materials	332
	Summary	335
	Problems	336
10	Maxwell Equations	339
10.1	Displacement Current	341
10.2	Electromagnetic Waves	345
10.3	The Maxwell Ratio of Units Experiment	350
10.4	Energy Density in the Electromagnetic Field	357
10.5	Energy Flux	360
10.6	Momentum Density in the Electromagnetic Field	363
10.7	Maxwell Equations in Matter	371
10.8	Discontinuities of E and B	377
10.9	The Electromagnetic Potentials	378
10.10	Covariance of Electromagnetism	382
10.11	Physical Meaning of the Electromagnetic Potentials	386
	Summary	394
	Problems	395
	Index	397
