## Part I Introduction

<b>1 An Introduction to Spin Glasses: History, Simulations and Phase Transition</b>	<b>3</b>
1.1 Background	3
1.1.1 The Glass Transition	3
1.1.2 The Origins of Spin Glass Theory	6
1.2 Observables in Simulations	17
1.2.1 Overlaps	19
1.2.2 Scalar Correlators	21
1.2.3 Tensorial Correlation Functions	23
1.2.4 Four-Replica Correlators	24
1.2.5 Correlation Lengths	25
1.3 Phase Transitions with a Diverging Length Scale	26
1.3.1 Second-Order-Like Phase Transitions	26
1.3.2 Real-Space Coarse Graining	27
1.3.3 Scaling Hypothesis and Widom Scaling	28
1.3.4 Finite-Size Scaling	29
1.3.5 Universality and Renormalization Group Flow	31
References	36

## Part II Criticality

<b>2 The Ising Spin Glass in a Field</b>	<b>45</b>
2.1 The de Almeida-Thouless Line in Three Dimensions	45
2.2 Model and Simulations	47
2.2.1 The 3d Edwards–Anderson Model in a Field	47
2.2.2 The Simulations	47
2.3 Giant Fluctuations and the Silent Majority	49
2.3.1 No Signs of a Phase Transition with Common Tools	49
2.3.2 A Hidden Behavior	49
2.3.3 Giant Fluctuations	50

2.4	Conditional Expectation Values and Variances . . . . .	52
2.4.1	The Conditioning Variate . . . . .	52
2.4.2	Measurements Against Samples . . . . .	53
2.4.3	The Selection of the Conditioning Variate. . . . .	54
2.5	Quantiles and a Modified Finite-Size Scaling Ansatz . . . . .	58
2.6	Testing the Quantile Approach . . . . .	59
2.6.1	The $P(q_{\text{med}})$ . . . . .	62
2.7	A <i>caveat</i> for the Quantile Description . . . . .	63
2.8	Finding a Privileged $q$ . . . . .	65
2.9	The Silent Majority . . . . .	65
2.10	This is not an Echo of the $h = 0$ Transition . . . . .	68
2.10.1	An Escaping Transition . . . . .	68
2.10.2	Scaling at $T = T_c(h = 0)$ . . . . .	69
2.11	Overview . . . . .	71
	References . . . . .	72
<b>3</b>	<b>Heisenberg Spin Glass with Random Exchange Anisotropy . . . . .</b>	<b>75</b>
3.1	The Kawamura Scenario . . . . .	75
3.2	Anisotropy in Spin Systems . . . . .	78
3.2.1	Single-Ion Anisotropy . . . . .	78
3.2.2	Dzyaloshinskii-Moriya Anisotropy . . . . .	79
3.2.3	Dipolar Anisotropy . . . . .	80
3.3	The Model and Its Symmetries . . . . .	80
3.4	Simulation Details and Equilibration . . . . .	81
3.5	Interpolations, Extrapolations and Errors. . . . .	83
3.6	Spin Glass Transition. . . . .	85
3.7	Chiral Glass Transition. . . . .	87
3.7.1	Uniqueness of the Transition. . . . .	87
3.8	Comparing with Weak Anisotropies. . . . .	89
3.9	An <i>ex post</i> Interpretation . . . . .	91
3.10	Overview . . . . .	92
	References . . . . .	93

### Part III Energy Landscapes

<b>4</b>	<b>Energy Landscape of <math>m</math>-Component Spin Glasses . . . . .</b>	<b>99</b>
4.1	Model and Simulations . . . . .	100
4.1.1	Model . . . . .	100
4.1.2	Simulations . . . . .	101
4.2	Features of the Inherent Structures Varying $m$ . . . . .	101
4.3	Overlap Probability Densities . . . . .	104
4.3.1	Link Overlaps . . . . .	107
4.4	Quench Dynamics . . . . .	108
4.5	Overview . . . . .	112
	References . . . . .	112

<b>5</b>	<b>Zero-Temperature Dynamics</b>	115
5.1	Self-organized Criticality and Marginal Stability in the SK Model	116
5.2	Stability and Correlations	117
5.2.1	Presence of Avalanches	117
5.2.2	Contained Avalanches	119
5.2.3	Multi-spin Stability	119
5.2.4	Bound Due to the Fluctuations	121
5.3	Finite-Size Cutoffs	122
5.3.1	Short-Range Models	124
5.3.2	Competition Between Short and Long Range Interactions	126
5.4	Dynamics	128
5.4.1	A Non-trivial Random Walk	129
5.4.2	Changing the Avalanche Dynamics	131
5.4.3	Fokker-Planck Description	133
5.5	Overview	136
	References	137
<b>6</b>	<b>Soft Modes and Localization in Spin Glasses</b>	139
6.1	Model and Simulations	141
6.2	Calculating the Density of States	142
6.2.1	Reaching the Inherent Structure	142
6.2.2	The Local Reference Frame	144
6.3	The Spectrum of the Hessian Matrix	145
6.4	Localization	147
6.5	Anharmonicity	150
6.5.1	Forcings	150
6.5.2	Rearrangements	154
6.5.3	Two-Level Systems	155
6.6	Overview	158
	References	158

## Part IV Conclusions and Outlook

<b>7</b>	<b>Conclusions</b>	163
7.1	General Considerations	163
7.2	State of the Art Computing	164
7.3	The Ising Spin Glass in a Magnetic Field	164
7.4	Heisenberg Spin Glass with a Strong Random Exchange Anisotropy	165
7.5	Energy Landscape of $m$ -Component Spin Glasses	165
7.6	Zero-Temperature Dynamics	165

7.7	Soft Modes and Localization in Spin Glasses . . . . .	166
7.8	Future Challenges and Opportunities . . . . .	166
	References . . . . .	168
<b>Appendix A: Monte Carlo on Heisenberg Spin Glasses. . . . .</b>		<b>169</b>
<b>Appendix B: Four-Replica Correlators. . . . .</b>		<b>179</b>
<b>Appendix C: Technical Details on the Creation of Quantiles. . . . .</b>		<b>195</b>
<b>Appendix D: Decomposing Conditional Expectations . . . . .</b>		<b>199</b>
<b>Appendix E: Managing the Errors . . . . .</b>		<b>205</b>
<b>Appendix F: The Inherent Structures . . . . .</b>		<b>209</b>
<b>Index . . . . .</b>		<b>217</b>

Spin Glasses

Criticality and Energy Landscapes
