1	Introduction	1
	References	6
2	Energetic Efficiency of Vehicles Equipped with Hybrid and Electric Drive Systems.	9
2.1	The Hybrid Drive System.	9
2.2	Classification of Hybrid Drive Systems	12
2.3	The Electric Drive System	21
2.4	Classification of Electric Drive Systems	23
	References	24
3	Development and Implementation of the Hybrid and Electric Systems Architecture Through Methods of Numerical Analysis	25
3.1	Mathematical Modeling of the Configuration Used in the Simulation Process	25
3.1.1	Equations of the Vehicle Element	25
3.1.2	Equations of the Clutch Element	28
3.1.3	Equations of the Gearbox Element.	29
3.1.4	Equations for the Final Drive Element	30
3.1.5	Equations of the Differential Element.	31
3.1.6	Equations of the IC Engine Element	32
3.1.7	Equations of the E-Machine (Generator) Element.	36
3.1.8	Equations of the E-Machine (Motor) Element	39
3.1.9	Equations of the Battery Element.	40
3.1.10	Equations of the GB Control Element	42
3.1.11	Equations of the GB Program Element.	44
3.1.12	Equations of the Wheel Element	44

3.2	Algorithm of the Simulation Process	46
3.3	Simulation for the Classic Bus Model in AVL CRUISE	48
3.4	Simulation for the Hybrid Bus Model in AVL CRUISE	60
3.5	Simulation for the Electric Bus Model in AVL CRUISE	74
	References	83
4	Study Case: Comparative Analysis Regarding the Buses Used for Urban Public Transportation for People Within Cluj-Napoca Municipality	85
4.1	Present Situation of the Urban Public Transportation System in Cluj-Napoca.	85
4.2	Comparative Analysis of the Types of Buses in Operation	91
4.3	Selection of Bus Operating Routes for Public Transport.	99
