

Contents

1	Introduction to Organ Fabrication	1
1.1	Organ Fabrication Paradigm	3
1.2	The Organ Fabrication Pathway	6
1.3	Case Study 1.1: Fabrication of Bioartificial Livers	11
1.4	Case Study 1.2: Fabrication of Bioartificial Lungs	14
1.5	Case Study 1.3: Fabrication of Bioartificial Pancreas	17
1.6	Scientific and Technological Challenges in Organ Fabrication	19
1.7	Bioartificial Organs as Models for Basic Research	22
1.8	Technology Development Pathway for Organ Fabrication	23
	References	26
2	Biosensors in Tissue and Organ Fabrication	31
2.1	Sensors and Tissue Engineering	32
2.2	Overview of Sensor Technology	34
2.3	Biological Sensors	37
2.4	Magnetic Sensors in Biological Systems	38
2.5	Acoustic Sensors in Biological Systems	41
2.6	Optical Sensors in Biological Systems	43
2.7	Flexible Sensors	45
2.8	Case Study 2.1: EKG Sensors for Cardiovascular Tissue Engineering	48
	References	51
3	Gene Therapy for the Heart	59
3.1	Genetic Engineering 101	61
3.2	Examples of Genetic Engineering	62
3.3	Important Milestones in the Field of Genetic Engineering	64
3.4	Personalized Medicine	65
3.5	The Genetic Code	67
3.6	Plasmid Vectors in Genetic Engineering	69
3.7	Recombinant DNA Technology	70
3.8	The Concept of Cardiac Gene Therapy	70
3.9	Three-Step Process for Cardiac Gene Therapy	71
3.10	Mode of Vector Delivery for Cardiac Gene Therapy	73
3.11	Therapeutic Targets for Cardiac Gene Therapy	75
3.12	Viral Vectors for Gene Therapy	76
3.13	Case Study 3.1: Genetic Engineering for Reprogramming Adult Somatic Cells	77
3.14	Case Study 3.2: Genetic Engineering to Increase Vascularization in 3D Tissue Grafts	79
	References	82

4	Cell Therapy for the Heart	85
4.1	The Cell Transplantation Process	88
4.2	Satellite Cell Biology	90
4.3	Case Study 4.1: Cardiomyoplasty Using Latissimus Dorsi Muscle	93
4.4	Case Study 4.2: Cardiac Cell Transplantation Using Primary Satellite Cells	95
4.5	Case Study 4.3: 3D Skeletal Muscle Tissue for Myocardial Repair	98
4.6	Concepts in Stem Cell Engineering	99
4.7	Embryonic Stem Cells for Tissue Engineering	100
4.8	Cardiac Myocytes Derived from Embryonic Stem Cells	102
4.9	Human Embryonic Stem Cells for Cardiac Cell Therapy	103
4.10	Human Embryonic Stem Cells and Heart Muscle Engineering	105
4.11	Current State of the Art and Future Perspective	106
4.12	Looking Ahead: hES Cells and 3D Heart Muscle	107
4.13	Challenges Associated with Embryonic Stem Cells	108
4.14	The Concept of Induced Pluripotent Stem Cells	109
4.15	Generation of Induced Pluripotent Stem Cells	110
4.16	Differentiation of Induced Pluripotent Stem Cells to form Cardiac Myocytes	111
4.17	iPS Derived Cardiac Myocytes for Cardiac Cell Therapy	111
4.18	iPS Derived Cardiac Myocytes for Heart Muscle Tissue Engineering	112
4.19	The Concept of Bone Marrow Derived Stem Cells	114
4.20	Isolation and Culture of Bone Marrow Derived Stem Cells	115
4.21	Differentiation of Bone Marrow Derived Stem Cells to Form Cardiac Myocytes	115
4.22	Bone Marrow Derived Cardiac Myocytes for Cardiac Cell Therapy	116
4.23	Bone Marrow Derived Cardiac Myocytes for Heart Muscle Tissue Engineering	117
	References	120
5	Heart Muscle Tissue Engineering	129
5.1	The Concept of Cardiac Patches	131
5.2	The Process to Bioengineer 3D Artificial Heart Muscle	131
5.3	Case Study Based Approach to Heart Muscle Engineering	134
5.4	Case Study 5.1: Self-Organization Technology for Cardioid Formation	135
5.5	Case Study 5.2: Scaffold Based Cardiac Tissue Engineering	141
5.6	Case Study 5.3: AVEM Model: Acellular Ventricular Extracellular Matrix Model	145
5.7	Case Study 5.4: Magnetic Levitation for 3D Heart Muscle	147
5.8	Case Study 5.5: Fibrin Based 3D Heart Muscle	149
5.9	Case Study 5.6: In Vivo Development of 3D Heart Muscle	151
5.10	Summary of Case Studies for Heart Muscle Tissue Engineering	154
	References	159
6	Biological Cardiac Assist Devices	169
6.1	Introduction to Biological Pumps	171
6.2	Process to Fabricate Biological Pumps	173
6.3	Case Study Based Approach to Biological Pumps	176
6.4	Case Study 6.1: Tubular Grafts for 3D Culture of Cardiac Cells	177
6.5	Case Study 6.2: Fabrication of Biological Pumps Using Cell Sheet Engineering	178
6.6	Case Study 6.3: Biological Pumps Based on Self Organized Heart Muscle	180
6.7	Case Study 6.4: In Vivo Model for Biological Pumps	183

6.8 Case Study 6.5: Fabrication of Tissue Engineered Heart Pumps..... 184

6.9 Milestones in the Development of Biological Pumps..... 188

6.10 Scientific and Technological Challenges 189

6.11 Clinical Applications of Biological Pumps 191

References 193

7 Bioengineered Bioartificial Ventricles 199

7.1 Left Ventricle Structure and Function 201

7.2 Hypoplastic Left Heart Syndrome..... 204

7.3 Pediatric Heart Transplantation 207

7.4 Design Requirements for Bioartificial Ventricles 210

7.5 Process to Fabricate Bioartificial Ventricles 211

7.6 Case Study 7.1: Organoid Model for Bioartificial Ventricles 213

7.7 Case Study 7–2: Fabrication of Bioartificial Ventricles 215

7.8 Clinical Applications of Bioartificial Ventricles 220
