<b>1</b>	<b>Causal Fermion Systems—An Overview</b>	<b>1</b>
1.1	The Abstract Framework	1
1.1.1	Basic Definitions	1
1.1.2	Space-Time and Causal Structure	4
1.1.3	The Kernel of the Fermionic Projector	6
1.1.4	Wave Functions and Spinors	7
1.1.5	The Fermionic Projector on the Krein Space	10
1.1.6	Geometric Structures	12
1.1.7	Topological Structures	16
1.2	Correspondence to Minkowski Space	17
1.2.1	Concepts Behind the Construction of Causal Fermion Systems	17
1.2.2	Introducing an Ultraviolet Regularization	22
1.2.3	Correspondence of Space-Time	26
1.2.4	Correspondence of Spinors and Physical Wave Functions	28
1.2.5	Correspondence of the Causal Structure	31
1.3	Underlying Physical Principles	42
1.4	The Dynamics of Causal Fermion Systems	44
1.4.1	The Euler-Lagrange Equations	44
1.4.2	Symmetries and Conserved Surface Layer Integrals	53
1.4.3	The Initial Value Problem and Time Evolution	57
1.5	Limiting Cases	59
1.5.1	The Quasi-free Dirac Field and Hadamard States	59
1.5.2	Effective Interaction via Classical Gauge Fields	61
1.5.3	Effective Interaction via Bosonic Quantum Fields	65
	Exercises	69
<b>2</b>	<b>Computational Tools</b>	<b>81</b>
2.1	The Fermionic Projector in an External Potential	82
2.1.1	The Fermionic Projector of the Vacuum	82

2.1.2	The External Field Problem . . . . .	83
2.1.3	Main Ingredients to the Construction . . . . .	84
2.1.4	The Perturbation Expansion of the Causal Green's Functions . . . . .	89
2.1.5	Computation of Operator Products . . . . .	92
2.1.6	The Causal Perturbation Expansion . . . . .	97
2.1.7	Introducing Particles and Anti-Particles . . . . .	103
2.2	The Light-Cone Expansion . . . . .	105
2.2.1	Basic Definition . . . . .	105
2.2.2	Inductive Light-Cone Expansion of the Green's Functions . . . . .	106
2.2.3	Structural Results for Chiral Potentials . . . . .	114
2.2.4	Reduction to the Phase-Free Contribution . . . . .	122
2.2.5	The Residual Argument . . . . .	134
2.2.6	The Non-causal Low Energy Contribution . . . . .	141
2.2.7	The Non-causal High Energy Contribution . . . . .	143
2.2.8	The Unregularized Fermionic Projector in Position Space . . . . .	147
2.3	Description of Linearized Gravity . . . . .	148
2.4	The Formalism of the Continuum Limit . . . . .	151
2.4.1	Example: The $i\epsilon$ -Regularization . . . . .	151
2.4.2	Example: Linear Combinations of $i\epsilon$ -Regularizations . . . . .	159
2.4.3	Further Regularization Effects . . . . .	162
2.4.4	The Formalism of the Continuum Limit . . . . .	163
2.4.5	Outline of the Derivation . . . . .	167
2.5	Computation of the Local Trace . . . . .	176
2.6	Spectral Analysis of the Closed Chain . . . . .	179
2.6.1	Spectral Decomposition of the Regularized Vacuum . . . . .	180
2.6.2	The Double Null Spinor Frame . . . . .	184
2.6.3	Perturbing the Spectral Decomposition . . . . .	187
2.6.4	General Properties of the Spectral Decomposition . . . . .	189
2.6.5	Spectral Analysis of the Euler-Lagrange Equations . . . . .	191
	Exercises . . . . .	193
<b>3</b>	<b>An Action Principle for an Interacting Fermion System and Its Analysis in the Continuum Limit . . . . .</b>	<b>209</b>
3.1	Introduction . . . . .	209
3.2	An Action Principle for Fermion Systems in Minkowski Space . . . . .	212
3.3	Assuming a Vacuum Minimizer . . . . .	215
3.4	Introducing an Interaction . . . . .	219
3.4.1	A Dirac Equation for the Fermionic Projector . . . . .	220
3.4.2	The Interacting Dirac Sea . . . . .	221

3.4.3	Introducing Particles and Anti-Particles . . . . .	222
3.4.4	The Light-Cone Expansion and Resummation . . . . .	222
3.4.5	Clarifying Remarks . . . . .	225
3.4.6	Relation to Other Approaches . . . . .	226
3.5	The Continuum Limit . . . . .	229
3.5.1	Weak Evaluation on the Light Cone . . . . .	229
3.5.2	The Euler-Lagrange Equations in the Continuum Limit . . . . .	234
3.6	The Euler-Lagrange Equations to Degree Five . . . . .	238
3.6.1	The Vacuum . . . . .	239
3.6.2	Chiral Gauge Potentials . . . . .	243
3.7	The Euler-Lagrange Equations to Degree Four . . . . .	246
3.7.1	The Axial Current Terms and the Mass Terms . . . . .	247
3.7.2	The Dirac Current Terms . . . . .	249
3.7.3	The Logarithmic Poles on the Light Cone . . . . .	250
3.7.4	A Pseudoscalar Differential Potential . . . . .	252
3.7.5	A Vector Differential Potential . . . . .	254
3.7.6	Recovering the Differential Potentials by a Local Axial Transformation . . . . .	256
3.7.7	General Local Transformations . . . . .	259
3.7.8	The Shear Contributions by the Local Axial Transformation . . . . .	260
3.7.9	Homogeneous Transformations in the High-Frequency Limit . . . . .	263
3.7.10	The Microlocal Chiral Transformation . . . . .	271
3.7.11	The Shear Contributions by the Microlocal Chiral Transformation . . . . .	275
3.8	The Field Equations . . . . .	278
3.8.1	The Smooth Contributions to the Fermionic Projector at the Origin . . . . .	278
3.8.2	Violation of Causality and the Vacuum Polarization . . . . .	283
3.8.3	Higher Order Non-Causal Corrections to the Field Equations . . . . .	290
3.8.4	The Standard Quantum Corrections to the Field Equations . . . . .	292
3.8.5	The Absence of the Higgs Boson . . . . .	298
3.8.6	The Coupling Constant and the Bosonic Mass in Examples . . . . .	300
3.9	The Euler-Lagrange Equations to Degree Three and Lower . . . . .	302
3.9.1	Scalar and Pseudoscalar Currents . . . . .	302
3.9.2	Bilinear Currents and Potentials . . . . .	303
3.9.3	Further Potentials and Fields . . . . .	304
3.9.4	The Non-Dynamical Character of the EL Equations to Lower Degree . . . . .	306

3.10	Nonlocal Potentials . . . . .	308
3.10.1	Homogeneous Transformations in the Low-Frequency Regime . . . . .	309
3.10.2	Homogeneous Perturbations by Varying the Momenta . . . . .	309
3.10.3	The Analysis of Homogeneous Perturbations on the Light Cone . . . . .	314
3.10.4	Nonlocal Potentials, the Quasi-Homogeneous Ansatz . . .	321
3.10.5	Discussion and Concluding Remarks . . . . .	325
<b>4</b>	<b>The Continuum Limit of a Fermion System Involving Neutrinos: Weak and Gravitational Interactions . . . . .</b>	<b>327</b>
4.1	Introduction . . . . .	327
4.2	Regularizing the Neutrino Sector . . . . .	330
4.2.1	A Naive Regularization of the Neutrino Sector . . . . .	331
4.2.2	Instability of the Naively Regularized Neutrino Sector . . . . .	332
4.2.3	Regularizing the Vacuum Neutrino Sector—Introductory Discussion . . . . .	335
4.2.4	Ruling Out the Chiral Neutrino Ansatz . . . . .	342
4.2.5	A Formalism for the Regularized Vacuum Fermionic Projector . . . . .	344
4.2.6	Interacting Systems, Regularization of the Light-Cone Expansion . . . . .	347
4.2.7	The $\iota$ -Formalism . . . . .	351
4.3	The Euler-Lagrange Equations to Degree Five . . . . .	354
4.3.1	The Vacuum . . . . .	355
4.3.2	The Gauge Phases . . . . .	357
4.4	The Euler-Lagrange Equations to Degree Four . . . . .	365
4.4.1	General Structural Results . . . . .	365
4.4.2	The Vacuum . . . . .	368
4.4.3	The Current and Mass Terms . . . . .	370
4.4.4	The Microlocal Chiral Transformation . . . . .	374
4.4.5	The Shear Contributions . . . . .	384
4.5	The Energy-Momentum Tensor and the Curvature Terms . . . .	387
4.5.1	The Energy-Momentum Tensor of the Dirac Field . . . .	387
4.5.2	The Curvature Terms . . . . .	389
4.5.3	The Energy-Momentum Tensor of the Gauge Field . . . .	392
4.6	Structural Contributions to the Euler-Lagrange Equations . . . .	397
4.6.1	The Bilinear Logarithmic Terms . . . . .	398
4.6.2	The Field Tensor Terms . . . . .	405
4.7	The Effective Action in the Continuum Limit . . . . .	410
4.7.1	Treating the Algebraic Constraints . . . . .	410
4.7.2	The Effective Dirac Action . . . . .	415
4.7.3	Varying the Effective Dirac Action . . . . .	417

4.8	The Field Equations for Chiral Gauge Fields . . . . .	422
4.9	The Einstein Equations . . . . .	426
<b>5</b>	<b>The Continuum Limit of a Fermion System Involving Leptons and Quarks: Strong, Electroweak and Gravitational Interactions . . . . .</b>	<b>431</b>
5.1	Introduction . . . . .	431
5.2	Preliminaries . . . . .	432
5.2.1	The Fermionic Projector and Its Perturbation Expansion . . . . .	432
5.2.2	Chiral Gauge Potentials and Gauge Phases . . . . .	436
5.2.3	The Microlocal Chiral Transformation . . . . .	437
5.2.4	The Causal Action Principle . . . . .	439
5.3	Spontaneous Block Formation . . . . .	440
5.3.1	The Statement of Spontaneous Block Formation . . . . .	440
5.3.2	The Sectorial Projection of the Chiral Gauge Phases . . . . .	443
5.3.3	The Bilinear Logarithmic Terms . . . . .	449
5.3.4	The Field Tensor Terms . . . . .	451
5.3.5	Proof of Spontaneous Block Formation . . . . .	451
5.4	The Effective Action . . . . .	460
5.4.1	The General Strategy . . . . .	460
5.4.2	The Effective Lagrangian for Chiral Gauge Fields . . . . .	462
5.4.3	The Effective Lagrangian for Gravity . . . . .	474
5.5	The Higgs Field . . . . .	477
	<b>Appendix A: Testing on Null Lines . . . . .</b>	<b>479</b>
	<b>Appendix B: Spectral Analysis of the Closed Chain . . . . .</b>	<b>487</b>
	<b>Appendix C: Ruling out the Local Axial Transformation . . . . .</b>	<b>499</b>
	<b>Appendix D: Resummation of the Current and Mass Terms at the Origin . . . . .</b>	<b>505</b>
	<b>Appendix E: The Weight Factors <math>\rho\beta</math> . . . . .</b>	<b>515</b>
	<b>Appendix F: The Regularized Causal Perturbation Theory with Neutrinos . . . . .</b>	<b>517</b>
	<b>Bibliography. . . . .</b>	<b>531</b>
	<b>Notation Index . . . . .</b>	<b>537</b>
	<b>Subject Index . . . . .</b>	<b>543</b>

The Continuum Limit of Causal Fermion Systems  
From Planck Scale Structures to Macroscopic Physics

Finster, F.

2016, XI, 548 p. 11 illus., Hardcover

ISBN: 978-3-319-42066-0
