

Contents

- 1 Introduction** 1
 - References 5
- 2 Fundamentals of Quantum Information Processing** 7
 - 2.1 Representing Information..... 8
 - 2.1.1 Composite Quantum Systems 10
 - 2.2 Processing Information 13
 - 2.2.1 Tensor Product of Operators 14
 - 2.2.2 Projection Operators 15
 - 2.3 Measuring Information 16
 - 2.4 Density Operator 18
 - 2.5 Entanglement..... 21
 - 2.6 Postulates of Quantum Mechanics 24
 - 2.7 Further Reading 26
 - References 26
- 3 Fundamentals of Information Theory** 27
 - 3.1 Classical Information Theory..... 28
 - 3.1.1 Entropy and Other Measures of Information 29
 - 3.1.2 Capacity of a Noisy Classical Channel 34
 - 3.2 Quantum Information Theory 41
 - 3.2.1 von Neumann Entropy and Other Measures of Information .. 42
 - 3.2.2 Quantum Channels..... 47
 - 3.2.3 Accessible Information, Holevo Bound and $C_{1,1}$
Capacity of Quantum Channels 52
 - 3.2.4 Classical Capacity of a Quantum Channel 54
 - 3.2.5 Other Capacities of Quantum Channels 57
 - 3.3 Further Reading 61
 - References 62

4	Classical Zero-Error Information Theory	65
4.1	The Zero-Error Capacity	66
4.1.1	The Adjacency-Reducing Mapping	69
4.2	Relation with Graph Theory	70
4.3	Lovász ϑ Function	73
4.4	The Sum and Product of Channels	77
4.5	Further Reading	78
	References	78
5	Zero-Error Capacity of Quantum Channels	79
5.1	Classical Zero-Error Capacity of Quantum Channels	80
5.2	Representation in Graphs	84
5.3	Quantum States Attaining the Zero-Error Capacity	85
5.4	Relation with Holevo-Schumacher-Westmoreland Capacity	87
5.5	Superactivation of Zero-Error Capacity	89
5.5.1	Activation of Zero-Error Capacity on Multipartite Quantum Channels	90
5.5.2	Superactivation of the Classical Zero-Error Capacity of Quantum Channels: Part I	96
5.5.3	Superactivation of the Classical Zero-Error Capacity of Quantum Channels: Part II	101
5.6	Further Reading	104
	References	105
6	Zero-Error Secrecy Capacity	107
6.1	Decoherence-Free Subspaces and Subsystems	108
6.1.1	Method for Obtaining Decoherence-Free Subspaces and Subsystem	110
6.1.2	Relation with the Zero-Error Capacity of Quantum Channels	113
6.2	Quantum Secrecy Capacity	114
6.3	Zero-Error Secrecy Capacity	117
6.4	Representation in Graphs	122
6.5	Security Analysis	123
6.6	Examples	124
6.7	Related Literature	129
6.8	Further Reading	130
	References	131
7	Zero-Error Accessible Information of a Quantum Source	135
7.1	Accessible Information of Quantum Sources	136
7.2	Zero-Error Accessible Information of a Quantum Source	139
7.3	Representation in Graphs	141
7.4	Examples	142
7.5	Related Literature	144
7.6	Further Reading	145

8 Recent Developments in Quantum Zero-Error Information

Theory	147
8.1 Bell's Inequalities	148
8.1.1 Functional Consistency	153
8.1.2 Context	155
8.1.3 Gleason's Theorem	156
8.1.4 The Kochen-Specker Theorem	157
8.2 Quantum Chromatic Number and Kochen-Specker Sets	160
8.2.1 Relationship Between $\xi(G)$, $\chi_q^{(1)}(G)$ and $\chi(G)$	163
8.3 Wielandt's Inequality	163
8.3.1 Quantum Index of Primitivity	167
8.4 Entanglement-Assisted Zero-Error Capacity	169
8.5 Non-Commutative Graphs and Quantum Lovász ϑ Function	172
8.6 \mathcal{QMA} -Completeness of Quantum Clique	175
8.7 Further Reading	179
References	180
Index	183

Quantum Zero-Error Information Theory

Guedes, E.B.; de Assis, F.M.; Medeiros, R.A.d.C.

2016, XIX, 189 p. 50 illus., Hardcover

ISBN: 978-3-319-42793-5
