
Contents

1	Systems and System Design	1
1.1	What Are Systems?	1
1.1.1	The External and the Internal Perspective on Systems	2
1.1.2	Natural Versus Artificial Systems	2
1.2	The External System Perspective	3
1.3	The Internal System Perspective	6
1.3.1	Uniqueness of Service Versus Diversity of Implementations	9
1.4	System as a Top-Down Recursive Notion	10
1.4.1	Recursion	10
1.5	System Design and System Construction	14
1.5.1	Levels of Decomposition and Composition	16
1.5.2	Early Warnings	17
1.5.3	Choosing Decomposition Levels	21
1.6	What Are Distributed Systems?	23
1.6.1	Logical and Physical Distribution	23
1.6.2	Distributed Systems	24
1.6.3	Examples of Distributed Systems	25
1.7	Wrapping-up	26
2	Design Models and Design Languages	29
2.1	Design Model	29
2.1.1	Alternative Models	31
2.1.2	Model Requirements	32
2.1.3	Purposes of Modelling	32
2.2	Abstraction	33
2.2.1	Equivalent Abstractions	34
2.2.2	Viewpoints, Perspectives or Projections	34
2.2.3	Abstraction and Refinement	35
2.2.4	Abstraction Levels	35
2.2.5	Common Properties	36
2.2.6	Service as Common Property of Different Implementations	37

2.3	Design Language	37
2.3.1	A Property and Its Expression Are Different Notions	38
2.3.2	Language Alternatives	40
2.3.3	Natural and Artificial Languages	40
2.4	Design Model and Design Language Relationship.	41
2.4.1	Design Concepts	42
2.4.2	Broad Spectrum Elementary Design Concepts.	44
2.4.3	Language Elements for Design Concepts	45
2.4.4	Characteristics of Design Languages	46
2.4.5	Specification Versus Description	48
2.5	System Design	49
2.6	General Purpose Languages and UML.	50
3	Basic Design Concepts	53
3.1	A System, Its Existence and Its Behaviour.	54
3.2	The Entity Concept	55
3.2.1	Origins of These Concepts	56
3.2.2	Entity: Identity and Identification	57
3.2.3	Entity: The Graphical Language Expression	57
3.2.4	Attributes of the Entity Concept	58
3.3	The Interaction Point Concept	58
3.3.1	Interaction Point: Identity and Identification	61
3.3.2	Interaction Point: The Graphical Language Expression	62
3.3.3	Attributes of the Interaction Point Concept.	63
3.4	The Interaction Concept.	63
3.4.1	Properties of the Interaction Concept	65
3.4.2	Interaction: Identity and Identification	68
3.4.3	Interaction: The Graphical Language Expression	69
3.4.4	Attributes of the Interaction Concept	70
3.5	The Behaviour Concept	77
3.5.1	Behaviour: Identity and Identification.	77
3.5.2	Behaviour: The Graphical Language Expression	78
3.5.3	Attributes Modelled by the Behaviour Concept	78
3.5.4	Design Implications of the Behaviour Concept	81
3.6	Assigning Behaviours to Entities.	82
3.7	Entity (De)Composition and Action Points.	83
3.7.1	The Action Point Concept	84
3.7.2	Action Point: The Graphical Language Expression	84
3.8	The Action Concept	85
3.8.1	Action: Identity and Identification	86
3.8.2	Action: The Graphical Language Expression.	87
3.8.3	Actions as Integrated Interactions	88

3.9	Behaviour with Actions and Interactions	89
3.10	Action Refinement	89
3.11	Elements of an Architecture	91
3.12	Basic and Composite Design Concepts	92
4	Behaviour Modelling with Causally Related Actions	93
4.1	The Causality Relation Concept	93
4.1.1	Causality Relation Identification	96
4.1.2	Causality Relation: Notation	96
4.1.3	Probability and Uncertainty Attribute	97
4.1.4	Semantics	98
4.1.5	Attribute References	99
4.1.6	Implementation Concerns	99
4.2	Basic Causality Conditions	100
4.2.1	Initial Condition and Initial Action	100
4.2.2	Independent Conditions and Independent Actions	102
4.2.3	Enabling	103
4.2.4	Disabling	105
4.2.5	Synchronisation	108
4.3	Conjunction and Disjunction of Basic Causality Conditions	110
4.3.1	Conjunction of Causality Conditions	110
4.3.2	Disjunction of Causality Conditions	113
4.3.3	Consistency	119
4.3.4	Distributivity Laws	121
4.4	Information, Time and Location Attributes	122
4.4.1	Information Attribute	123
4.4.2	Location Attribute	128
4.4.3	Time Attribute	129
4.4.4	Relating Different Attribute Types	131
5	Behaviour Structuring	135
5.1	Goals of Structuring	135
5.2	How to Express Structure	136
5.3	Two Structuring Possibilities	137
5.4	Causality-Oriented Structuring	138
5.4.1	Entries and Exits	139
5.4.2	Parameterised Entries and Exits	143
5.4.3	Behaviour Instantiation	145
5.4.4	Recursive Behaviour Instantiation	147
5.5	Constraint-Oriented Structuring	148
5.5.1	Decomposition of Actions	149
5.5.2	Alternative Decompositions	150
5.5.3	Action Attribute Constraints	151

5.5.4	Multiple Sub-behaviours.	152
5.5.5	Interaction Structure.	153
5.5.6	Relation with Entity Decomposition.	153
5.6	Combination of Causality-and Constraint-Oriented Structuring	155
5.6.1	Behaviour Definition Template	155
5.6.2	Example: Mail Ordering.	157
6	Interaction Refinement and Abstraction.	163
6.1	Concepts Applied	164
6.2	Patterns of Interaction Refinement.	164
6.2.1	Interface Refinement	164
6.2.2	Peer-Entity Introduction	165
6.2.3	Intermediary Entity Introduction	166
6.2.4	Interaction Distribution.	167
6.3	Conformance Assessment.	168
6.3.1	Causality Context of an Interaction	168
6.3.2	Conformance Requirements	169
6.3.3	Abstraction Method	170
6.4	Example: Provider-Confirmed Message Passing	172
6.4.1	Step 1	172
6.4.2	Step 2	173
6.4.3	Step 3	174
6.4.4	Step 4	175
6.5	Example: Unconfirmed Message Passing	175
6.5.1	Step 1	176
6.5.2	Step 2	176
7	Interaction Systems.	179
7.1	Universe of Discourse	180
7.2	Analytical Perspective	182
7.2.1	Connectability.	182
7.2.2	Connectable Systems	184
7.2.3	Connectable Protocol Functions.	186
7.2.4	Service of the Interaction System	187
7.2.5	A-P Functions Border: A New Interaction System?	188
7.2.6	Overview of the Analysis.	190
7.3	Syntactical Perspective.	190
7.3.1	Service Design	191
7.3.2	Protocol Design	193
7.3.3	Lower Level Service Design.	194
7.4	Definition of Interaction System	198

7.5	Implementation Aspects	199
7.5.1	Implementing Connectivity.	199
7.6	Duality of System and Interaction System	201
7.6.1	Designing the Service of (Interaction) Systems	203
7.6.2	Recurrent Decomposition and Specification Preferences	206
7.7	Service and Protocol Versus Interaction and Action.	206
7.8	Classes of Interaction Systems	207
7.9	The Service Concept in Service-Oriented Architecture.	208
7.10	Examples	210
7.10.1	Bolt and Nut.	210
7.10.2	Chess.	213
7.10.3	Airline Reservation System.	213
7.10.4	File System	215
7.10.5	Message Transfer System.	218
8	Service Design	221
8.1	Service Structuring	221
8.1.1	Service Users	223
8.1.2	Service Primitives	225
8.1.3	Service Definition	225
8.1.4	A Constraint-Oriented Service Structuring Principle.	228
8.1.5	Remote Interaction Function	230
8.2	Refinement of LSIs and RIFs	234
8.2.1	Quality Design Principles	234
8.2.2	Service Elements.	236
8.3	Implementation Aspects of LSIs and RIFs	238
8.4	Example: Data Transfer Service	239
9	Service Elements.	241
9.1	Associations	241
9.1.1	Data	242
9.2	User Needs for Data Transfer	243
9.2.1	Cost.	243
9.2.2	Time	244
9.2.3	Reliability	244
9.2.4	Other Needs	245
9.2.5	User Needs Versus Provider Constraints.	246
9.2.6	Quality of Service	246
9.3	Classification of Service Types	246
9.3.1	Connectionless Services	247
9.3.2	Connection-Oriented Service.	254

9.4	Service Element Types	258
9.4.1	Formal Specification of the Connection-Oriented Service.	259
10	Protocol Design.	263
10.1	Protocol Structuring	263
10.1.1	Protocol Entities and Lower Level Service	264
10.1.2	Preserving the Service Structure in the Protocol	269
10.2	The Concept of Protocol Data Unit	271
10.3	Protocol Elements	273
10.4	Refined Protocol Entity Structure	274
10.4.1	Upper Protocol Functions and a Lower Level Service	274
10.4.2	Intermediate Level Service	276
10.4.3	Lower Protocol Functions.	277
10.5	ILS and LLS Design	281
10.6	Complexity of Protocol (Revisited)	282
10.7	Examples	284
10.7.1	Data Transfer Protocol	284
10.7.2	Alternating Bit Protocol	284
11	Protocol Elements.	287
11.1	Service and Protocol Elements	287
11.1.1	Protocol Elements (Revisited)	289
11.1.2	Association Control	289
11.1.3	Addressing	290
11.1.4	Data Transfer	291
11.1.5	QoS, Time Performance	295
11.1.6	QoS, Reliability	298
11.1.7	Security and Protection	299
11.1.8	Cost.	299
11.1.9	Iterative Protocol Design	300
11.1.10	Protocol Implementation.	302
11.2	Example of Protocol Design: Delivery Confirmation	303
11.2.1	Required Service	303
11.2.2	Underlying Service	305
11.2.3	Protocol Design	307
11.2.4	Simplified Protocol Design.	317
12	Reference Models and Standard Interaction Systems	321
12.1	Reference Model.	321
12.2	Standard Interaction System	324
12.2.1	Adaptation Layer.	325
12.2.2	Recurrent Extension of the Layering Structure	326
12.2.3	Incompletely Defined Functions	327

12.3	Examples: The ISO-OSI Reference Model and the Internet Protocol Suite	327
12.4	Manipulation of Standard Interaction Systems.	330
12.4.1	Separation of Concerns Revisited	331
	Appendix: Work Lectures: Exercises with Answers.	333
	References.	377
