1	Introduction	1
1.1	Background and Content	1
1.2	Statistical Duality—an Outline	5
	References	9
 Part I Mathematics		
2	Rudiments of Hilbert Space Theory	13
2.1	Basic Notions and the Projection Theorem	13
2.2	The Fréchet–Riesz Theorem and Bounded Linear Operators	17
2.3	Strong, Weak, and Monotone Convergence of Nets of Operators	20
2.4	The Projection Lattice $\mathcal{P}(\mathcal{H})$	22
2.5	The Square Root of a Positive Operator	24
2.6	The Polar Decomposition of a Bounded Operator	26
2.7	Orthonormal Sets	27
2.8	Direct Sums of Hilbert Spaces	31
2.9	Tensor Products of Hilbert Spaces	32
2.10	Exercises	34
	Reference	36
3	Classes of Compact Operators	37
3.1	Compact and Finite Rank Operators	37
3.2	The Spectral Representation of Compact Selfadjoint Operators	40
3.3	The Hilbert–Schmidt Operator Class $\mathcal{HS}(\mathcal{H})$	45
3.4	The Trace Class $\mathcal{T}(\mathcal{H})$	47
3.5	Connection of the Ideals $\mathcal{T}(\mathcal{H})$ and $\mathcal{HS}(\mathcal{H})$ with the Sequence Spaces ℓ^1 and ℓ^2	49
3.6	The Dualities $\mathcal{C}(\mathcal{H})^* = \mathcal{T}(\mathcal{H})$ and $\mathcal{T}(\mathcal{H})^* = \mathcal{L}(\mathcal{H})$	52

3.7	Linear Operators on Hilbert Tensor Products and the Partial Trace.	55
3.8	The Schmidt Decomposition of an Element of $\mathcal{H}_1 \otimes \mathcal{H}_2$	59
3.9	Exercises.	61
4	Operator Integrals and Spectral Representations:	
	The Bounded Case	63
4.1	Classes of Sets and Positive Measures	63
4.2	Measurable Functions	65
4.3	Integration with Respect to a Positive Measure	65
4.4	The Hilbert Space $L^2(\Omega, \mathcal{A}, \mu)$	68
4.5	Complex Measures and Integration.	69
4.6	Positive Operator Measures	71
4.7	Positive Operator Bimeasures	75
4.8	Integration of Bounded Functions with Respect to a Positive Operator Measure.	80
4.9	The Connection Between (Semi)Spectral Measures and (Semi)Spectral Functions	83
4.10	A Riesz–Markov–Kakutani Type Representation Theorem for Positive Operator Measures.	85
4.11	The Spectral Representation of Bounded Selfadjoint Operators	86
4.12	The Spectrum of a Bounded Operator	93
4.13	The Spectral Representations of Unitary and Other Normal Operators	94
4.14	Exercises.	96
	References.	99
5	Operator Integrals and Spectral Representations:	
	The Unbounded Case	101
5.1	Elementary Notes on Unbounded Operators	101
5.2	Integration of Unbounded Functions with Respect to Positive Operator Measures	104
5.3	Integration of Unbounded Functions with Respect to Projection Valued Measures	107
5.4	The Cayley Transform	110
5.5	The Spectral Representation of an Unbounded Selfadjoint Operator	113
5.6	The Support of the Spectral Measure of a Selfadjoint Operator	115
5.7	Applying a Borel Function to a Selfadjoint Operator	117
5.8	One-Parameter Unitary Groups and Stone’s Theorem.	119
5.9	Taking Stock: Hilbert Space Theory and Its Use in Quantum Mechanics.	123

5.10	Exercises.	125
	References.	126
6	Miscellaneous Algebraic and Functional Analytic Techniques	127
6.1	Normal and Positive Linear Maps on $\mathcal{L}(\mathcal{H})$	127
6.2	Basic Notions of the Theory of C^* -algebras and Their Representations.	130
6.3	Algebraic Tensor Products of Vector Spaces	134
6.4	Completions	135
6.5	Exercises.	135
	References.	136
7	Dilation Theory	137
7.1	Completely Positive Linear Maps	137
7.2	A Bilinear Dilation Theorem	139
7.3	The Stinespring and Naimark Dilation Theorems	144
7.4	Normal Completely Positive Operators from $\mathcal{L}(\mathcal{H})$ into $\mathcal{L}(\mathcal{K})$	147
7.5	Naimark Projections of Operator Integrals	152
7.6	Operations and Instruments.	153
7.7	Measurement Dilation.	159
7.8	Exercises.	161
	References.	162
8	Positive Operator Measures: Examples	163
8.1	The Canonical Spectral Measure and Its Fourier-Plancherel Transform.	163
8.2	Restrictions of Spectral Measures	166
8.3	Smearings and Convolutions.	168
8.4	Phase Space Operator Measures	172
8.5	Moment Operators and Spectral Measures	175
8.6	Semispectral Measures and Direct Integral Hilbert Spaces	178
8.7	A Dirac Type Formalism: An Elementary Approach	182
8.8	Exercises.	185
	References.	186

Part II Elements

9	States, Effects and Observables	191
9.1	States	192
9.2	Effects.	196
9.3	Observables	200
9.4	State Changes	208
9.5	Compound Systems	213
9.6	Exercises.	221
	References.	223

10	Measurement	225
10.1	Measurement Schemes	226
10.2	Instruments	230
10.3	Sequential, Joint and Mixed Measurements	232
10.4	Examples of Measurement Schemes	236
10.5	Repeatable Measurements	247
10.6	Ideal Measurements	248
10.7	Correlations, Disturbance and Entanglement	252
10.8	Appendix	255
10.9	Exercises	258
	References	259
11	Joint Measurability	261
11.1	Definitions and Basic Results	261
11.2	Alternative Definitions	265
11.3	Regular Observables	266
11.4	Sharp Observables	269
11.5	Compatibility, Convexity, and Coarse-Graining	271
11.6	Exercises	273
	References	274
12	Preparation Uncertainty	275
12.1	Indeterminate Values of Observables	276
12.2	Measures of Uncertainty	276
12.3	Examples of Preparation Uncertainty Relations	280
12.4	Exercises	284
	References	285
13	Measurement Uncertainty	287
13.1	Conceptualising Error and Disturbance	288
13.2	Comparing Distributions	290
13.3	Error Bar Width	294
13.4	Value Comparison Error	299
13.5	Connections	302
13.6	Unsharpness	303
13.7	Finite Outcome Observables	307
13.8	Appendix	312
13.9	Exercises	314
	References	314

Part III Realisations

14	Qubits	319
14.1	Qubit States and Observables	319
14.2	Preparation Uncertainty Relations for Qubits	322
14.3	Compatibility of a Pair of Qubit Effects	324

14.4	Excursion: Compatibility of Three Qubit Effects	329
14.5	Approximate Joint Measurements of Qubit Observables.	331
14.6	Appendix	340
14.7	Exercises.	342
	References.	343
15	Position and Momentum	345
15.1	The Weyl Pairs.	345
15.2	Preparation Uncertainty Relations for Q and P	350
15.3	Approximate Joint Measurements of Q and P	353
15.4	Measuring Q and P with a Single Measurement Scheme.	355
15.5	Appendix	358
15.6	Exercises.	363
	References.	364
16	Number and Phase	367
16.1	Covariant Observables	368
16.2	Canonical Phase	372
16.3	Phase Space Phase Observables	379
16.4	Number-Phase Complementarity.	381
16.5	Other Phase Theories	384
16.6	Exercises.	386
	References.	387
17	Time and Energy	389
17.1	The Concept of Time in Quantum Mechanics	389
17.2	Time in Nonrelativistic Classical Mechanics.	391
17.3	Covariant Time Observables in Nonrelativistic Quantum Mechanics.	394
17.4	Exercises.	402
	References.	402
18	State Reconstruction	405
18.1	Informational Completeness	406
18.2	The Pauli Problem	408
18.3	State Reconstruction	413
18.4	Exercises.	421
	References.	423
19	Measurement Implementations	425
19.1	Arthurs–Kelly Model	426
19.2	Photon Detection, Phase Shifters and Beam Splitters	433
19.3	Balanced Homodyne Detection and Quadrature Observables . . .	439
19.4	Eight-Port Homodyne Detection and Phase Space Observables	443

19.5	Eight-Port Homodyne Detection and Phase Observables	447
19.6	Mach–Zehnder Interferometer.	452
19.7	Exercises.	461
	References.	461
 Part IV Foundations		
20	Bell Inequalities and Incompatibility	465
20.1	Bell Inequalities and Compatibility: General Observations	465
20.2	Bell Inequalities and Joint Probabilities	467
20.3	Bell Inequality Violation and Nonlocality.	470
20.4	Bell Inequality Violation and Incompatibility	471
20.5	Exercises.	475
	References.	475
21	Measurement Limitations Due to Conservation Laws	477
21.1	Measurement of Spin Versus Angular Momentum Conservation.	477
21.2	The Yanase Condition	479
21.3	The Wigner–Araki–Yanase Theorem	479
21.4	A Quantitative Version of the WAY Theorem	481
21.5	Position Measurements Obeying Momentum Conservation	482
21.6	A Measurement-Theoretic Interpretation of Superselection Rules	485
21.7	Exercises.	487
	References.	487
22	Measurement Problem	489
22.1	Preliminaries.	489
22.2	Reading of Pointer Values	491
22.3	The Problem of Objectification.	493
22.4	Exercises.	496
	References.	496
23	Axioms for Quantum Mechanics	499
23.1	Statistical Duality and Its Representation	500
23.2	Quantum Logic.	507
23.3	Filters and the Projection Postulate.	514
23.4	Hilbert Space Coordinatisation	518
23.5	The Role of Symmetries in the Representation Theorem	524
23.6	The Case of the Complex Field	530
23.7	Exercises.	532
	References.	534
