

Contents

1	The Appeal of Physics	1
1.1	The Interplay of the Eye and the Mind	1
1.2	Advanced Technologies	4
1.3	The Pillars of Contemporary Physics	6
1.3.1	Mysteries of Light	6
1.3.2	Fundamental Structure of Matter	8
1.4	The Infinitely Complex	9
1.5	The Universe	12
1.6	Physical Constants	12
2	A Quantum Phenomenon	15
2.1	Wave Behavior of Particles	18
2.1.1	Interferences	18
2.1.2	Wave Behavior of Matter	19
2.1.3	Analysis of the Phenomenon	21
2.2	Probabilistic Nature of Quantum Phenomena	22
2.2.1	Random Behavior of Particles	22
2.2.2	A Nonclassical Probabilistic Phenomenon	22
2.3	Conclusions	23
2.4	Appendix: Notions on Probabilities	27
2.5	Exercises	33
3	Wave Function, Schrödinger Equation	35
3.1	Terminology and Methodology	35
3.2	Principles of Wave Mechanics	37
3.2.1	The Wave Function	37
3.2.2	Schrödinger Equation	38
3.3	Superposition Principle	40
3.4	Wave Packets	41
3.4.1	Free Wave Packets	41
3.4.2	Fourier Transforms	41
3.4.3	Shape of Wave Packets	43

3.5	Historical Landmarks	44
3.6	Momentum Probability Law	45
3.6.1	Free Particle.	45
3.6.2	General Case	46
3.7	Heisenberg Uncertainty Relations	46
3.8	Controversies and Paradoxes.	50
3.9	Exercises.	52
3.10	Appendix: Dirac δ “Function”, Distributions.	53
3.11	Appendix: Fourier Transformation	58
3.11.1	Uncertainty Relation	61
3.12	Exercises.	62
4	Physical Quantities	63
4.1	Statement of the Problem	64
4.1.1	Physical Quantities	64
4.1.2	Position and Momentum	65
4.2	Observables	66
4.2.1	Position Observable.	67
4.2.2	Momentum Observable	67
4.2.3	Correspondence Principle	68
4.2.4	Historical Landmarks.	69
4.3	A Counterexample of Einstein and Its Consequences	69
4.3.1	What Do We Know After a Measurement?	71
4.3.2	Eigenstates and Eigenvalues of an Observable.	72
4.3.3	Wave Packet Reduction.	73
4.4	The Specific Role of Energy.	74
4.4.1	The Hamiltonian	74
4.4.2	The Schrödinger Equation, Time and Energy	75
4.4.3	Stationary States	76
4.4.4	Motion: Interference of Stationary States.	77
4.5	Schrödinger’s Cat	78
4.6	Exercises.	82
5	Energy Quantization	83
5.1	Methodology.	83
5.1.1	Bound States and Scattering States	84
5.1.2	One-Dimensional Problems	85
5.2	The Harmonic Oscillator.	85
5.3	Square Well Potentials	87
5.4	Double Well, the Ammonia Molecule.	92
5.4.1	The Model.	92
5.4.2	Stationary States, the Tunnel Effect	93
5.4.3	Energy Levels	95
5.4.4	Wave Functions.	96
5.4.5	Inversion of the Molecule	97

5.5	Illustrations and Applications of the Tunnel Effect	99
5.6	Tunneling Microscopy, Nanotechnologies.	102
5.7	Exercises.	104
5.8	Problem. The Ramsauer Effect	106
5.8.1	Solution.	107
5.9	Problem. Colored Centers in Ionic Crystals.	108
5.9.1	Solution.	112
6	Principles of Quantum Mechanics	119
6.1	Hilbert Space	120
6.2	Dirac Formalism	124
6.2.1	Notations	124
6.2.2	Operators	126
6.2.3	Syntax Rules	127
6.2.4	Projectors; Decomposition of the Identity	128
6.3	Measurement Results	128
6.3.1	Eigenvectors and Eigenvalues of an Observable	129
6.3.2	Results of the Measurement of a Physical Quantity	130
6.3.3	Probabilities.	130
6.3.4	The Riesz Spectral Theorem	131
6.3.5	Physical Meaning of Various Representations	133
6.4	Principles of Quantum Mechanics.	133
6.5	Heisenberg's Matrices.	136
6.6	The Polarization of Light, Quantum "Logic"	140
6.7	Exercises.	144
7	Two-State Systems.	147
7.1	The NH_3 Molecule	148
7.2	"Two-State" System	148
7.3	Matrix Quantum Mechanics	151
7.4	NH_3 in an Electric Field	154
7.4.1	Uniform Constant Field	155
7.4.2	Weak and Strong Field Regimes	156
7.4.3	Other Two-State Systems.	157
7.5	Motion of Ammonia Molecule in an Inhomogeneous Field	158
7.5.1	Force on the Molecule in an Inhomogeneous Field	158
7.5.2	Population Inversion	160
7.6	Reaction to an Oscillating Field, the Maser	160
7.7	Principle and Applications of the Maser.	163
7.7.1	Amplifiers	164
7.7.2	Oscillators	164
7.7.3	Atomic Clocks and the GPS	165
7.7.4	Tests of Relativity	166

7.8	Exercises	169
7.9	Problem: Neutrino Oscillations	170
7.9.1	Mechanism of the Oscillations; Reactor Neutrinos	172
7.9.2	Oscillations of Three Species; Atmospheric Neutrinos	174
7.9.3	Solution	176
7.9.4	Comments	181
8	Algebra of Observables	183
8.1	Commutation of Observables	183
8.1.1	Fundamental Commutation Relation	184
8.1.2	Other Commutation Relations	184
8.1.3	Dirac in the Summer of 1925	185
8.2	Uncertainty Relations	186
8.3	Evolution of Physical Quantities	187
8.3.1	Evolution of an Expectation Value	187
8.3.2	Particle in a Potential, Classical Limit	188
8.3.3	Conservation Laws	190
8.4	Algebraic Resolution of the Harmonic Oscillator	191
8.5	Commuting Observables	194
8.5.1	Theorem	195
8.5.2	Example	196
8.5.3	Tensor Structure of Quantum Mechanics	196
8.5.4	Complete Set of Commuting Observables (CSCO)	197
8.5.5	Completely Prepared Quantum State	198
8.6	Sunday September 20, 1925	199
8.7	Exercises	201
8.8	Problem. Quasi-Classical States of the Harmonic Oscillator	204
8.8.1	Solution	205
8.9	Problem. Benzene and C_8 Molecules	208
8.9.1	Solution	209
8.10	Problem. Conductibility of Crystals; Band Theory	210
8.10.1	Solution	215
9	Approximation Methods	219
9.1	Perturbation Theory	219
9.1.1	Definition of the Problem	219
9.1.2	First Order Perturbation Theory	221
9.1.3	Second Order Perturbation to the Energy Levels	223
9.2	The Variational Method	224
9.3	Exercises	227

10	Angular Momentum	229
10.1	Fundamental Commutation Relation	230
10.1.1	Classical Angular Momentum	230
10.1.2	Definition of an Angular Momentum Observable	230
10.1.3	Results of the Quantization	231
10.2	Proof of the Quantization	231
10.2.1	Statement of the Problem	231
10.2.2	Vectors $ j, m\rangle$ and Eigenvalues j and m	233
10.2.3	Operators $\hat{J}_{\pm} = \hat{J}_x \pm i\hat{J}_y$	233
10.2.4	Quantization	235
10.3	Orbital Angular Momenta	236
10.3.1	Formulae in Spherical Coordinates	236
10.3.2	Integer Values of m and ℓ	236
10.3.3	Spherical Harmonics	237
10.4	Rotation Energy of a Diatomic Molecule	239
10.5	Interstellar Molecules, the Origin of Life	241
10.6	Angular Momentum and Magnetic Moment	245
10.6.1	Classical Model	246
10.6.2	Quantum Transposition	247
10.6.3	Experimental Consequences	248
10.6.4	Larmor Precession	249
10.6.5	What About Half-Integer Values of j and m ?	250
10.7	Exercises	250
11	The Hydrogen Atom	253
11.1	Two-Body Problem; Relative Motion	254
11.2	Motion in a Central Potential	256
11.3	The Hydrogen Atom	260
11.3.1	Atomic Units; Fine Structure Constant	261
11.3.2	The Dimensionless Radial Equation	262
11.3.3	Spectrum of Hydrogen	264
11.3.4	Stationary States of the Hydrogen Atom	265
11.3.5	Dimensions and Orders of Magnitude	267
11.3.6	Historical Landmarks	268
11.4	Muonic Atoms	269
11.5	Exercises	272
11.6	Problem. Decay of a Tritium Atom	275
11.6.1	Solution	276
12	Spin 1/2	279
12.1	Experimental Results	279
12.2	Spin 1/2 Formalism	281
12.3	Complete Description of a Spin 1/2 Particle	283
12.3.1	Observables	284
12.4	Physical Spin Effects	285

12.5	Spin Magnetic Moment.	285
12.6	The Stern–Gerlach Experiment	286
12.7	Principle of the Experiment	287
12.7.1	Semi-classical Analysis	287
12.7.2	Experimental Results	288
12.7.3	Explanation of the Stern–Gerlach Experiment	289
12.7.4	Successive Stern–Gerlach Setups.	291
12.7.5	Measurement Along an Arbitrary Axis	293
12.8	The Discovery of Spin	294
12.8.1	The Hidden Sides of the Stern–Gerlach Experiment	294
12.8.2	Einstein and Ehrenfest’s Objections.	296
12.8.3	Anomalous Zeeman Effect.	297
12.8.4	Bohr’s Challenge to Pauli	298
12.8.5	The Spin Hypothesis	298
12.8.6	The Fine Structure of Atomic Lines	299
12.9	Magnetism, Magnetic Resonance	300
12.9.1	Spin Effects, Larmor Precession	301
12.9.2	Larmor Precession in a Fixed Magnetic Field	301
12.9.3	Rabi’s Calculation and Experiment	302
12.9.4	Nuclear Magnetic Resonance.	306
12.9.5	Magnetic Moments of Elementary Particles.	307
12.10	Entertainment: Rotation by 2π of a Spin $1/2$	308
12.11	Exercises.	310
13	Addition of Angular Momenta	313
13.1	Addition of Angular Momenta	313
13.1.1	A Simple Case: The Addition of Two Spins $1/2$	315
13.1.2	Addition of Two Arbitrary Angular Momenta.	318
13.2	One-Electron Atoms, Spectroscopic Notations	322
13.2.1	Fine Structure of Monovalent Atoms.	323
13.3	Hyperfine Structure; The 21 cm Line of Hydrogen.	325
13.4	Radioastronomy	330
13.5	The 21-cm Line of Hydrogen.	333
13.6	The Intergalactic Medium; Star Wars	336
13.7	Exercises.	341
14	Identical Particles, the Pauli Principle	343
14.1	Indistinguishability of Two Identical Particles	344
14.1.1	Identical Particles in Classical Physics.	344
14.1.2	The Quantum Problem.	345
14.1.3	Example of Ambiguities	345
14.2	Two-Particle System; The Exchange Operator	346
14.2.1	The Hilbert Space for the Two-Particle System.	346

14.2.2	The Exchange Operator Between Two Identical Particles	346
14.2.3	Symmetry of the States	348
14.3	The Pauli Principle	349
14.3.1	The Case of Two Particles.	349
14.3.2	Independent Fermions and Exclusion Principle	350
14.3.3	The Case of N Identical Particles	350
14.4	Physical Consequences of the Pauli Principle.	352
14.4.1	Exchange Force Between Two Fermions.	352
14.4.2	The Ground State of N Identical Independent Particles	353
14.4.3	Behavior of Fermion and Boson Systems at Low Temperatures.	354
14.4.4	Stimulated Emission and the Laser Effect	357
14.4.5	Uncertainty Relations for a System of N Fermions	358
14.5	Problem: Discovery of the Pauli Principle	361
14.5.1	Solution.	365
14.6	Problem. Heisenberg Relations for Fermions. The Way to Macroscopic Systems	369
14.6.1	Uncertainty Relations for N Fermions	369
14.6.2	White Dwarfs and the Chandrasekhar Mass	371
14.6.3	Neutron stars	373
14.6.4	Mini-boson Stars	375
14.6.5	Solution.	377
15	Lagrangian and Hamiltonian, Lorentz Force in Quantum Mechanics	385
15.1	Lagrangian Formalism and the Least Action Principle	386
15.2	Canonical Formalism of Hamilton and Jacobi.	389
15.3	Analytical Mechanics and Quantum Mechanics	391
15.4	Classical Charged Particle in an Electromagnetic Field.	393
15.5	Lorentz Force in Quantum Mechanics	394
15.5.1	Hamiltonian.	394
15.5.2	Gauge Invariance.	394
15.5.3	The Hydrogen Atom Without Spin in a Uniform Magnetic Field.	396
15.5.4	Spin 1/2 Particle in an Electromagnetic Field	397
15.6	Exercises.	397
15.7	Problem. Landau Levels	399
15.7.1	Solution.	400
16	The Evolution of Systems	403
16.1	Time-Dependent Perturbation Theory	403
16.2	Interaction of an Atom with an Electromagnetic Wave.	407

16.2.1	The Electric Dipole Approximation	408
16.2.2	Justification of the Electric Dipole Interaction	408
16.2.3	Absorption of Energy by an Atom	409
16.2.4	Selection Rules	411
16.2.5	Spontaneous Emission	411
16.3	Decay of a System	413
16.3.1	The Radioactivity of ^{57}Fe	413
16.3.2	The Fermi Golden Rule	415
16.3.3	Orders of Magnitude	416
16.3.4	Behavior for Long Times	417
16.4	The Time-Energy Uncertainty Relation	420
16.4.1	Isolated Systems and Intrinsic Interpretations	421
16.4.2	Interpretation of Landau and Peierls	422
16.4.3	The Einstein–Bohr Controversy	422
16.5	Exercises	423
16.6	Problem. Molecular Lasers	425
16.6.1	Solution	427
17	Entangled States. The Way of Paradoxes	433
17.1	The EPR Paradox	434
17.2	The Version of David Bohm	435
17.2.1	Bell's Inequality	437
17.2.2	Experimental Tests	441
17.3	The GHZ Experiment	443
17.4	Quantum Cryptography; How to Take Advantage of an Embarrassment	446
17.5	The Quantum Computer	451
17.6	Quantum Teleportation	454
17.7	Concluding Remarks	456
18	Solutions to the Exercises	459
	Index	495

Lectures on Quantum Mechanics

With Problems, Exercises and their Solutions

Basdevant, J.-L.

2016, XVI, 501 p. 122 illus. in color., Hardcover

ISBN: 978-3-319-43478-0
