

Contents

1	Introduction	1
1.1	Role of Natural Resources in the economic process	1
1.1.1	Primary and secondary factors of production	2
1.1.2	Focus on non-renewable Energy-Resources	3
1.2	Emerging needs in Environmental Impact Analysis	5
1.3	Objectives and structure of the book	5
	References	7
2	Review of Resources Accounting Methods	9
2.1	Life Cycle Assessment	9
2.2	Introduction to resources accounting	11
2.3	Input-Output analysis	14
2.3.1	Basic Leontief model: single production process	14
2.3.2	Basic Leontief model: generic system composed by n processes	16
2.3.3	Meaning of the Leontief Inverse coefficients	22
2.3.4	Assumptions of the Leontief Input-Output model	24
2.3.5	Classification of Input-Output Tables	25
2.3.6	Data Organization and application of Input-Output analysis	27
2.3.7	Practical application of Input-Output analysis	30
2.4	Process analysis	32
2.4.1	Definition and formalization of Process analysis	33
2.4.2	Practical application of Process analysis	34
2.5	Discussion	36
	References	37
3	Accounting for Energy-Resources use by Thermodynamics	43
3.1	Life Cycle Assessment methods based on Thermodynamics	43
3.1.1	Energy-Based methods	44
3.1.2	Entropy-Based methods	45
3.1.3	Exergy-Based methods	45

3.2	Thermodynamic characterization of non-renewable energy-resources	50
3.2.1	Irreversible depletion process	51
3.2.2	Reversible depletion process	52
3.2.3	The Exergy of common fossil fuels	53
3.2.4	The role of reference environment	55
	References.	57
4	Exergy based Input-Output analysis	61
4.1	Evaluating primary exergy embodied in goods and services.	62
4.1.1	Monetary Input-Output tables of national economies	63
4.1.2	Treatment of international trades: Single-Region models	69
4.1.3	Treatment of international trades: Multi-regional models	71
4.2	Hybrid Input-Output analysis	76
4.2.1	General formulation of the Hybrid Input-Output analysis	76
4.2.2	Increasing the accuracy of Input-Output analysis	79
4.2.3	Life Cycle Assessment of detailed systems	80
4.3	Thermodynamic performance assessment of Energy Conversion Systems	82
4.3.1	Relation between Exergy Cost Theory and Input-Output analysis	82
4.3.2	Design Evaluation of Energy Conversion Systems based on ELCA.	85
	References.	86
5	Internalization of human labour in Input-Output analysis.	91
5.1	Internalization of human labour in LCA: literature review	91
5.2	Bioeconomic ExIO analysis: theoretical definition	93
5.2.1	Accounting for Products Required for Human Labour Production.	95
5.2.2	Definition of the Bioeconomic ExIO model	96
	References.	98
6	Case studies: applications of the Exergy based Input-Output analysis.	101
6.1	Exergy-based Input-Output analysis of World national economies.	101
6.1.1	Data sources and assumptions.	101
6.1.2	About the evaluation of the Leontief Inverse Coefficients matrix	107
6.1.3	Primary exergy embodied in national economic production.	108
6.1.4	Exergy embodied in detailed products of the Italian economy	113

6.2	Exergy Life Cycle Assessment of a Waste-to-Energy power plant.	118
6.2.1	Waste-to-Energy power plant: layout and thermodynamic model	118
6.2.2	Application of the Exergy Cost Theory.	119
6.2.3	Application of the Exergy Life Cycle Assessment	121
6.2.4	Design evaluation and optimization of the system	126
6.3	Applications of the Bioeconomic ExIO analysis.	128
6.3.1	Primary exergy embodied in national economic production.	128
6.3.2	Primary exergy requirements of alternative dishwashing practices	132
	References.	135
7	Conclusions	139
7.1	Advantages and drawbacks of the ExIO framework	139
7.2	Final Remarks	141

Primary Exergy Cost of Goods and Services

An Input – Output Approach

Rocco, M.V.

2016, XIII, 141 p. 36 illus., 6 illus. in color., Softcover

ISBN: 978-3-319-43655-5
