

Contents

1	A Conscious Life	1
	Why consciousness is a topic that should occupy the mind of conscious people. Key concepts are introduced and the phenomenon briefly described.	
	Conscious and Unconscious Processes	3
	Should We Aim for Reason or Happiness?	10
2	The Brain—Your Personal Necktop Computer	19
	The chapter provides an introduction for those who are unfamiliar with the inside of their head. I find it helpful to compare brains with computers.	
	The Anatomy of the Most Complex Object	19
	Neuron Style Talking	23
	The Concept of Brain Modules	29
	Brain Versus Computer	36
3	The Evolution of Nervous Systems	43
	The process of evolution gives us the principles required to make sense of life on Earth. The development of nerve cells was one of the biggest breakthroughs; yet, in the beginning nothing suggested where this innovation would lead.	
	Why Nervous Systems?	44
	Further Improvements	48
	On Bees and Octopuses	53
	What Is Intelligent Behaviour?	59
4	Conscious Brains	63
	The first signs of consciousness probably appeared some 300 million years ago. It was a risky venture, so why did evolution choose this path? Surprisingly, refinements eventually gave rise to a species with the capacity to answer the question.	
	A Common Currency	63

Hence Consciousness	68
When Did It All Start?	75
Signs of Consciousness in Animals.	79
When Is It Needed?	87
Has It Been a Success?	90
How We Became What We Are	92
The Human Case.	96
I Think, Therefore I Am?	100
5 The Neurobiological Correlate	105
Scientists struggle to understand how nerve cells create conscious experiences, but we have a model. The model suggests which parts of the brain are involved and what goes on there.	
Cortex and Thalamus	106
Integrated Information.	117
What We Can Do Without	119
We Learn When Something Goes Wrong	126
The Bigger the Better?	132
The Hardest Problem.	134
6 States and Disorders of Consciousness.	139
There are many facets to a conscious life. Besides the gradual transition from full attention to sleep and anaesthesia, several factors affect what sort of experiences the brain serves you.	
Sleep	140
Anaesthesia	146
Life History.	148
Maladies Affecting the Mind.	151
Wilfully Altered States	156
7 Quality of Life	159
Understanding consciousness offers valuable insight into what happiness is about. The text consequently provides an approach for improving life.	
Hedonia and Eudaimonia	159
The Mood Modules.	162
On or Off	172
Mental Disorders.	176
Darwinian Happiness.	177
8 Environmental Concerns.	181
The brain is designed to develop in interaction with external stimuli, which means we are shaped by the environment in which we live. The question is therefore how to provide conditions that have a positive effect on the human mind?	
Childhood and Life Situation	182

The Damage Due to Discords	188
The Achilles Heel	193
9 Mental Exercise	199
In addition to creating a suitable environment, it is possible to exercise the brain to the effect of tuning up pleasures and turning off pains. This requires a proper training routine.	
Use Your Head	199
The Psychological Challenge	204
Meditative Techniques	212
Technical Tools	217
Habits—For Good and Bad	223
A Model of the Mind	230
10 In the Future	233
How can we exploit our knowledge of the human brain in order to further improve quality of life?	
The Main Challenge	233
Next Generation Gym	238
A Final Word	245

The Evolution of Consciousness
Implications for Mental Health and Quality of Life
