

Contents

1	Fermat's Principle and General Considerations Regarding Centered Optical Systems	1
1.1	An Introduction to Fermat's Principle	1
1.2	Forming an Image	5
1.3	Axial Chromatic Aberrations	9
1.4	Monochromatic Aberrations	10
1.5	Surfaces of Revolution	12
1.6	Ray Tracing in Axially Symmetric Systems	16
1.7	Exercises	19
2	Gaussian Optics	23
2.1	Gaussian Approximation for a Single Surface	23
2.2	Compound Systems	27
2.3	Useful Decompositions of Matrix \mathbb{T}	29
2.4	Principal Planes and Focal Lengths	32
2.5	Stops and Pupils	34
2.6	Some Gaussian Optical Invariants	36
2.7	Gaussian Analysis of Compound Systems	38
2.8	A Graphical Method	42
2.9	Thick and Thin Lenses	43
2.10	A Different Approach to Gaussian Optics	45
2.11	Exercises	48
3	Fermat's Principle and Third-Order Aberrations	53
3.1	Introduction	53
3.2	The Aberration Function	54
3.3	A New Aberration Function	58
3.4	The Aberration Function Φ for a Single Surface	62
3.5	The Total Aberration Function for a Compound System	67
3.6	Analysis of Third-Order Aberrations	72

3.7	Petzval's Theorem	76
3.8	Aberration Formulae	78
3.9	Combined Effect of Third-Order Aberrations	79
3.10	Primary or Axial Chromatic Aberrations	80
3.11	Third-Order Aberrations in the Exit Pupil.	83
3.12	Plate with Parallel Plane Faces	88
4	About Higher Order Aberrations.	91
4.1	Aplanatism and Sine Condition	91
4.2	Aplanatic Refractive Surfaces	95
4.3	Introduction to Fifth-Order Aberrations	96
4.4	Meaning of the Terms of (4.33), (4.34)	100
4.5	The Light Diffraction and the Airy Disk.	102
5	Newtonian and Cassegrain Telescopes	107
5.1	The Newtonian Telescope.	107
5.2	Location and Dimension of Flat Mirror	110
5.3	Newtonian Telescope with Spherical Primary Mirror	112
5.4	Cassegrain Telescopes	113
5.5	Spherical Aberration and Coma in Cassegrain Telescopes	115
5.6	Concluding Remarks.	116
5.7	Examples	117
6	Cameras for Astronomy	119
6.1	Introduction	119
6.2	Aberrations for a Single Mirror	120
6.3	Schmidt's Camera.	121
6.4	Examples of Schmidt's Camera	125
6.5	Wright's Camera.	127
6.6	Houghton's Camera	129
6.7	Examples	138
6.8	Maksutov Camera.	139
6.9	Examples	143
7	Compound Cassegrain Telescopes	145
7.1	Introduction to Cassegrain Telescopes	145
7.2	Schmidt-Cassegrain Telescopes	147
7.3	Examples	148
7.4	Houghton-Cassegrain Telescopes	151
7.5	Examples	154
7.6	Maksutov-Cassegrain Telescopes	157
7.7	Examples	159
7.8	Final Remarks.	161
8	Doublets and Triplets	163
8.1	Achromatic Doublets	163
8.2	Elimination of Spherical Aberration and Coma.	165

8.3	Examples	167
8.4	Triplets	170
8.5	Examples	171
9	Other Optical Combinations.	175
9.1	Schmidt–Cassegrain Telescope with Spherical Surfaces	175
9.2	The Flat-field Baker–Schmidt Camera	177
9.3	Cassegrain Telescope with the Corrector at the Prime Focus . . .	180
9.4	The Klevtsov Telescope	182
9.5	A First Analysis of the Meniscus	183
9.6	Analysis of Mangin Mirror	184
9.7	Buchroeder’s Camera	185
9.8	The Baker–Nunn Camera	187
9.9	Houghton–Cassegrain Telescope with Sub-Aperture Corrector.	190
9.10	Petzval’s Objective	193
10	Fermat’s Principle and Wave Fronts.	197
10.1	Fermat’s Principle.	197
10.2	The Boundary Value Problem	206
10.3	Maupertuis’ Principle	208
10.4	Fermat’s Principle and the Formation of Mirages	210
10.5	Rotational Symmetry and Lagrange’s invariant.	212
10.6	Wave Fronts and Fermat’s Principle	215
10.7	Huygens’ Principle	219
11	Hamiltonian Optics	221
11.1	Hamilton’s Equations in Geometric Optics	221
11.2	Hamilton’s Principal Functions	223
11.3	Symmetries and Characteristic Functions	227
11.4	Lagrange’s Optical Invariant for Axially Symmetric Systems	229
11.5	Hamiltonian Equations and Primary Aberrations	230
11.6	Equations of Primary Aberrations	234
11.7	The Case of Spherical Surfaces	238
11.8	Recalls of Symplectic Mechanics	239
11.9	Symplectic Optics.	244
12	Principal Functions and Primary Aberrations	247
12.1	Introduction to Third-Order Aberrations	247
12.2	Third-Order Aberrations via Angular Function	248
12.3	Reduced Coordinates	251
12.4	Schwarzschild’s eikonal	253
12.5	Addition Theorem for Third-Order Aberrations	256
12.6	Fourth-Order Expansion of Angular Function.	258
12.7	Aberrations of Axially Symmetric Systems	261

13 Introduction to Optics in Anisotropic Media	265
13.1 Maxwell's Equations in Anisotropic Media	265
13.2 Refractive Index in Anisotropic Media	267
13.3 Fermat's Principle in Anisotropic Media	270
Appendix A: First-Order PDE	273
Appendix B: Symplectic Vector Spaces	281
References	285
Index	287

Geometric Optics

Theory and Design of Astronomical Optical Systems
Using Mathematica®

Romano, A.; Cavaliere, R.

2016, XII, 289 p. 168 illus., 56 illus. in color., Hardcover

ISBN: 978-3-319-43731-6
