

Contents

1	Navier–Stokes Equation	1
1.1	Conservation of Mass	1
1.2	Conservation of Momentum	4
1.3	Constitutive Equation	13
1.4	Incompressible Navier–Stokes Equations	15
1.5	Example: Poiseuille Flow	18
1.6	Example: Couette Flow	21
1.7	Time Discretization	26
1.8	Stokes Problem	30
1.9	Mixed Velocity–Pressure Discretization	36
1.10	Direct Resolution of the Stokes Problem	41
1.11	Space Discretization of Characteristics	44
1.12	Example: Driven Cavity Flow	49
1.13	Iterative Resolution of the Stokes Problem	56
1.14	Notes	60
2	Quasi-Newtonian Fluids	63
2.1	Viscosity Function	63
2.2	Problem Statement	66
2.3	Example: Poiseuille Flow	67
2.4	Example: Couette Flow	68
2.5	Time Discretization	71
2.6	Minimization Problem	72
2.7	Saddle Point and Variational Formulations	75
2.8	Fixed Point Algorithm	76
2.9	Example: Poiseuille Flow in a Square Section	80
2.10	Newton Algorithm	81
2.11	Notes	90

3	Viscoplastic Fluids	91
3.1	Energy of Dissipation	92
3.2	Subdifferential	93
3.3	Problem Statement	99
3.4	Rigid Regions	99
3.5	Example: Poiseuille Flow	101
3.6	Example: Couette Flow	104
3.7	Time Discretization	110
3.8	Variational Formulation	111
3.9	Regularization Method	112
3.10	Augmented Lagrangian Algorithm	115
3.11	Space Approximation	123
3.12	Example: Poiseuille Flow in a Square Section	128
3.13	Example: Flow Around an Obstacle	132
3.14	Example: Driven Cavity Flow	136
3.15	Notes	139
4	Viscoelastic Fluids	143
4.1	Constitutive Equations	143
4.2	Objective Tensor Derivatives	145
4.3	Problem Statement	153
4.4	Example: Poiseuille Flow	155
4.5	Example: Couette Flow	160
4.6	Time Discretization with the θ -Scheme Algorithm	167
4.7	Space Approximation	171
4.8	Tensorial Transport Subproblem	172
4.9	Variational Formulation	175
4.10	Discontinuous Galerkin Method	177
4.11	Example: Flow in an Abrupt Contraction	187
4.12	Log-Conformation Tensor Formulation	190
4.13	Energy Estimate	199
4.14	Example: Driven Cavity Flow	205
4.15	Notes	207
5	Elastoviscoplastic Fluids	215
5.1	Conservation of Energy	216
5.2	Second Principle of Thermodynamics	219
5.3	Framework for Constitutive Equations	222
5.3.1	Generalized Standard Materials	222
5.3.2	Example: Elastic Material	224
5.3.3	Example: Newtonian Fluid	225
5.3.4	Example: Herschel–Bulkley Model	227
5.3.5	Example: Oldroyd Model	230
5.4	Problem Statement	231
5.5	Example: Poiseuille Flow	235

5.6	Example: Couette Flow	242
5.7	Example: Flow Around an Obstacle	247
5.8	Notes	251
