

# Preface

This is the first part of an intensive 2-year course of algebra for students beginning a professional study of higher mathematics. This textbook is based on courses given at the Independent University of Moscow and at the Faculty of Mathematics in the National Research University Higher School of Economics. In particular, it contains a large number of exercises that were discussed in class, some of which are provided with commentary and hints, as well as problems for independent solution, which were assigned as homework. Working out the exercises is of crucial importance in understanding the subject matter of this book.
