

Contents

1 Overview	1
1.1 Historic Overview	1
1.2 Principles of Elispot	2
1.3 Modifications	4
1.3.1 Simplifications	5
1.3.1.1 Coating Step	5
1.3.1.2 Detection Step	6
1.3.2 Adaptations	6
1.3.2.1 Detection of Specific Antibodies.....	6
1.3.2.1 Detection of Multiple Analytes in One Well.....	7
1.4 Summary	10
2 Important Assay Details	11
3 Reagents and Materials	13
3.1 Elispot Plates.....	13
3.2 Antibody Choices.....	17
3.3 Enzymatic Conjugates and Substrates	17
3.4 Fluorescent Dyes.....	19
3.5 Culture Media	19
3.6 Blocking Buffers	21
3.7 Washing Buffers.....	21
3.8 Important Laboratory Supplies	22
3.8.1 Pipettes.....	22
3.8.2 Filters	23
3.8.3 Other Supplies.....	23
3.9 Automated Elispot Readers.....	23
4 Sample Preparation	25
4.1 Overview	25
4.2 Whole Blood and PBMC	26
4.2.1 Blood Draw and Anticoagulants	26

4.2.2	PBMC Isolation	26
4.2.3	Time Frame Between Blood Draw and PBMC Isolation	28
4.3	Immune Cells Obtained from Tissue	31
4.4	Freezing of Cells	31
4.5	Thawing of Cells	33
4.6	Cell Counting and Viability	34
4.7	Overnight Resting	36
4.8	Isolation of Subpopulations of Cells.....	39
4.9	Expansion of Cells	40
5	Planning the Experiment.....	43
5.1	Controls.....	43
5.1.1	Negative Controls.....	43
5.1.2	Positive Controls	44
5.1.3	External Controls	46
5.2	Plate Layout	46
5.3	Timing	47
6	The Elispot Assay	49
6.1	Coating	49
6.2	Blocking.....	50
6.3	Effector Cell Preparation	51
6.4	Stimulant Preparation.....	52
6.4.1	Peptides and Peptide Pools	52
6.4.2	Proteins and Lysate	54
6.4.3	Antigen Presenters	54
6.4.4	Control Stimulants	55
6.5	Reference Samples.....	56
6.6	Plating Out Cells and Stimulants	56
6.7	Incubation	59
6.8	Removal of Cells.....	59
6.9	Spot Development.....	60
6.10	Enumeration of Spots.....	61
7	Data Analysis	67
8	Quality Control	73
9	Reporting Guidelines	79
10	Troubleshooting.....	81
	References.....	83
	Index.....	91
