

Contents

1	Stationary Processes	1
1.1	Stationarity and Invariance	1
1.2	Stationary Processes with a Finite Variance	5
1.3	Measurability and Continuity in Probability	13
1.4	Linear Processes	15
1.5	Comments on Chapter 1	25
1.6	Exercises to Chapter 1	25
2	Elements of Ergodic Theory of Stationary Processes and Strong Mixing	27
2.1	Basic Definitions and Ergodicity	27
2.2	Mixing and Weak Mixing	36
2.3	Strong Mixing	53
2.4	Conservative and Dissipative Maps	60
2.5	Comments on Chapter 2	69
2.6	Exercises to Chapter 2	70
3	Infinitely Divisible Processes	73
3.1	Infinitely Divisible Random Variables, Vectors, and Processes	73
3.2	Infinitely Divisible Random Measures	81
3.3	Infinitely Divisible Processes as Stochastic Integrals	89
3.4	Series Representations	103
3.5	Examples of Infinitely Divisible Self-Similar Processes	109
3.6	Stationary Infinitely Divisible Processes	120
3.7	Comments on Chapter 3	128
3.8	Exercises to Chapter 3	129
4	Heavy Tails	133
4.1	What Are Heavy Tails? Subexponentiality	133
4.2	Regularly Varying Random Variables	146
4.3	Multivariate Regularly Varying Tails	154

4.4	Heavy Tails and Convergence of Random Measures	167
4.5	Comments on Chapter 4	171
4.6	Exercises to Chapter 4	172
5	Introduction to Long-Range Dependence	175
5.1	The Hurst Phenomenon	175
5.2	The Joseph Effect and Nonstationarity	182
5.3	Long Memory, Mixing, and Strong Mixing	188
5.4	Comments on Chapter 5	190
5.5	Exercises to Chapter 5	190
6	Second-Order Theory of Long-Range Dependence	193
6.1	Time-Domain Approaches	193
6.2	Spectral Domain Approaches	197
6.3	Pointwise Transformations of Gaussian Processes	216
6.4	Comments on Chapter 6	226
6.5	Exercises to Chapter 6	227
7	Fractionally Differenced and Fractionally Integrated Processes	229
7.1	Fractional Integration and Long Memory	229
7.2	Fractional Integration of Second-Order Processes	233
7.3	Fractional Integration of Processes with Infinite Variance	242
7.4	Comments on Chapter 7	245
7.5	Exercises to Chapter 7	246
8	Self-Similar Processes	247
8.1	Self-Similarity, Stationarity, and Lamperti's Theorem	247
8.2	General Properties of Self-Similar Processes	255
8.3	SSSI Processes with Finite Variance	263
8.4	SSSI Processes Without a Finite Variance	268
8.5	What Is in the Hurst Exponent? Ergodicity and Mixing	273
8.6	Comments on Chapter 8	281
8.7	Exercises to Chapter 8	282
9	Long-Range Dependence as a Phase Transition	285
9.1	Why Phase Transitions?	285
9.2	Phase Transitions in Partial Sums	287
9.3	Partial Sums of Finite-Variance Linear Processes	292
9.4	Partial Sums of Finite-Variance Infinitely Divisible Processes ...	300
9.5	Partial Sums of Infinite-Variance Linear Processes	312
9.6	Partial Sums of Infinite-Variance Infinitely Divisible Processes ...	325
9.7	Phase Transitions in Partial Maxima	337
9.8	Partial Maxima of Stationary Stable Processes	343
9.9	Comments on Chapter 9	355
9.10	Exercises to Chapter 9	359

10 Appendix	363
10.1 Topological Groups	363
10.2 Weak and Vague Convergence	364
10.3 Signed Measures	369
10.4 Occupation Measures and Local Times	373
10.5 Karamata Theory for Regularly Varying Functions	384
10.6 Multiple Integrals with Respect to Gaussian and S α S Measures ..	397
10.7 Inequalities, Random Series, and Sample Continuity	399
10.8 Comments on Chapter 10	402
10.9 Exercises to Chapter 10	403
Bibliography	405
Index	413

Stochastic Processes and Long Range Dependence

Samorodnitsky, G.

2016, XI, 415 p. 5 illus., Hardcover

ISBN: 978-3-319-45574-7
