

Contents

1	Introduction	1
1.1	The Three Pillar Approach	1
1.2	Solvency	2
1.3	From the Past to the Future	4
1.4	The Full Balance Sheet Approach	5
1.5	Recent Financial Failures and Difficulties	6
2	Stochastic Discounting	9
2.1	The Basic Discrete and Finite Time Model	9
2.2	Market-Consistent Valuation in the Basic Discrete Time Model	12
2.2.1	The Task of Modelling	15
2.2.2	Understanding Deflators and Zero Coupon Bonds	16
2.2.3	A Toy Example for Deflators	19
2.3	Valuation at Time $t > 0$	21
2.4	The Meaning of Reserves	25
2.5	Equivalent Martingale Measures	27
2.6	Insurance Technical and Financial Variables	35
2.6.1	Choice of Numeraire	35
2.6.2	Probability Distortion	38
2.7	Conclusions on Chapter 2	43
3	The Valuation Portfolio in Life Insurance	45
3.1	Deterministic Life Insurance Models: An Example	45
3.2	The Valuation Portfolio for the Deterministic Life Insurance Model	47
3.3	The General VaPo Construction for Deterministic Insurance Technical Risks	49
3.4	Linearity of the VaPo for Deterministic Insurance Technical Risk	51

3.5	The VaPo Protected Against Insurance Technical Risks	52
3.5.1	Construction on Example 3.1 with Stochastic Mortality . . .	52
3.5.2	Probability Distortion of Life Tables	57
3.6	Back to the Basic Model: Formal Construction	59
3.7	A Numerical Unit-Linked Insurance Example	62
3.8	The Approximate Valuation Portfolio	69
3.9	Conclusions on Chapter 3.	72
4	Financial Risks and Solvency	73
4.1	Asset and Liability Management	73
4.2	The Procedure to Control Financial Risks	76
4.3	Financial Modelling of the Margrabe Option	78
4.3.1	Stochastic Discounting: Repetition	78
4.3.2	Modelling Margrabe Options	79
4.4	Hedging Margrabe Options.	82
4.5	The Risk Measure Approach	85
5	The Valuation Portfolio in Non-life Insurance	91
5.1	Introduction to Claims Reserving	91
5.2	Construction of the VaPo in Non-life Insurance	95
5.2.1	Loss Development Triangles	95
5.2.2	The Gamma-Gamma Bayesian Chain-Ladder Model	98
5.2.3	The VaPo Construction with CL in the Run-Off Situation	100
5.3	The Protected VaPo for a Non-life Insurance Run-Off	103
5.3.1	The Claims Development Result	104
5.3.2	The Nominal Claims Development Result	106
5.3.3	The Conditional Mean Square Error of Prediction	106
5.3.4	The Conditional Long-Term MSE in the CL Method	108
5.3.5	The Claims Development Result Uncertainty in the CL Method	113
5.3.6	The Run-Off of Risk Profile in the CL Method	116
5.3.7	The Cost-of-Capital Loading	119
5.4	Unallocated Loss Adjustment Expenses	122
5.4.1	Motivation	122
5.4.2	Pure Claims Payments	122
5.4.3	ULAE Charges	123
5.4.4	The New York-Method	124
5.5	Conclusions on the Non-life VaPo	129
