

Contents

1	<i>p</i>-Adic Analysis: Essential Ideas and Results	1
1.1	The Field of <i>p</i> -Adic Numbers	1
1.1.1	Additive Characters	2
1.1.2	Multiplicative Characters	2
1.2	Topology of \mathbb{Q}_p^n	3
1.3	The Bruhat-Schwartz Space and the Fourier Transform	3
1.3.1	The Fourier Transform of Test Functions	4
1.4	Distributions	4
1.4.1	The Fourier Transform of a Distribution	5
1.4.2	The Direct Product of Distributions	5
1.4.3	The Convolution of Distributions	6
1.4.4	The Multiplication of Distributions	6
1.5	Essential Aspects of the <i>p</i> -Adic Manifolds	6
1.5.1	Implicit Function Theorem	7
1.5.2	<i>p</i> -Adic Analytic Manifolds	8
1.5.3	Integration on <i>p</i> -Adic Manifolds	9
1.5.4	Integration Over the Fibers	10
2	Parabolic-Type Equations and Markov Processes	13
2.1	Introduction	13
2.2	Operators <i>W</i> , Parabolic-Type Equations and Markov Processes	14
2.2.1	A Class of Non-local Operators	14
2.2.2	Some Additional Results	17
2.2.3	<i>p</i> -Adic Description of Characteristic Relaxation in Complex Systems	18
2.2.4	Heat Kernels	20
2.2.5	Markov Processes Over \mathbb{Q}_p^n	22
2.2.6	The Cauchy Problem	24
2.2.7	The Taibleson Operator and the <i>p</i> -Adic Heat Equation	26

2.3	Elliptic Pseudodifferential Operators, Parabolic-Type Equations and Markov Processes	28
2.3.1	Elliptic Operators	28
2.3.2	Decaying of the Fundamental Solution at Infinity	31
2.3.3	Positivity of the Fundamental Solution	35
2.3.4	Some Additional Results	37
2.3.5	The Cauchy Problem	39
2.3.6	Markov Processes Over \mathbb{Q}_p^n	40
3	Non-Archimedean Parabolic-Type Equations with Variable Coefficients	43
3.1	Introduction	43
3.2	A Class of Non-local Operators	43
3.3	Parabolic-Type Equations with Constant Coefficients	45
3.3.1	Claim $u(x, t) \in \mathfrak{M}_\lambda$	46
3.3.2	Claim $u(x, t)$ Satisfies the Initial Condition	51
3.3.3	Claim $u(x, t)$ Is a Solution of Cauchy Problem (3.4)	51
3.4	Parabolic-Type Equations with Variable Coefficients	59
3.4.1	Parametrized Cauchy Problem	60
3.4.2	Heat Potentials	61
3.4.3	Construction of a Solution	64
3.5	Uniqueness of the Solution	70
3.6	Markov Processes	73
3.7	The Cauchy Problem Is Well-Posed	75
4	Parabolic-Type Equations and Markov Processes on Adeles	79
4.1	Introduction	79
4.2	Preliminaries	80
4.2.1	Adeles on \mathbb{Q}	80
4.2.2	Fourier Transform on Adeles	82
4.3	Metric Structures, Distributions and Pseudodifferential Operators on \mathbb{A}_f	84
4.3.1	A Structure of Complete Metric Space for the Finite Adeles	84
4.3.2	The Fourier Transform of Radial Functions	91
4.3.3	Distributions on \mathbb{A}_f	98
4.3.4	Pseudodifferential Operators and the Lizorkin Space on \mathbb{A}_f	101
4.4	Metric Structures, Distributions and Pseudodifferential Operators on \mathbb{A}	104
4.4.1	A Structure of Complete Metric Space for the Adeles	104
4.4.2	Distributions on \mathbb{A}	104
4.4.3	Pseudodifferential Operators and the Lizorkin Space on \mathbb{A}	105
4.5	The Adelic Heat Kernel on \mathbb{A}_f	108
4.6	Markov Processes on \mathbb{A}_f	111

4.7	Cauchy Problem for Parabolic Type Equations on \mathbb{A}_f	113
4.7.1	Homogeneous Equations with Initial Values in $\mathcal{D}(\mathbb{A}_f)$	114
4.7.2	Homogeneous Equations with Initial Values in $L^2(\mathbb{A}_f)$	116
4.7.3	Homogeneous Equations with Initial Values in $\mathcal{L}_0(\mathbb{A}_f)$	117
4.7.4	Non Homogeneous Equations	118
4.8	The Adelic Heat Kernel on \mathbb{A}	118
4.9	Markov Processes on \mathbb{A}	119
4.10	Cauchy Problem for Parabolic Type Equations on \mathbb{A}	122
4.10.1	Homogeneous Equations	122
4.10.2	Non Homogeneous Equations	125
5	Fundamental Solutions for Pseudodifferential Operators, and Equations of Schrödinger Type	127
5.1	Introduction	127
5.2	The Method of Analytic Continuation of Gel'fand-Shilov	128
5.3	Igusa's Local Zeta Functions	129
5.4	Fundamental Solutions for Pseudodifferential Operators	130
5.5	Fundamental Solutions for Quasielliptic Pseudodifferential Operators	133
5.6	Schrödinger-Type Pseudodifferential Equations	137
5.6.1	The Homogeneous Equation	140
5.6.2	The Inhomogeneous Equation	143
6	Pseudodifferential Equations of Klein-Gordon Type	145
6.1	Introduction	145
6.2	Preliminaries	146
6.2.1	Fourier Transform on Finite Dimensional Vector Spaces	146
6.2.2	The p -Adic Minkowski Space	147
6.2.3	Invariant Measures Under the Orthogonal Group $O(Q)$	148
6.2.4	Some Remarks About p -Adic Analytic Manifolds	149
6.2.5	Some Additional Results on $\delta(Q(k) - t)$	151
6.2.6	The p -Adic Restricted Lorentz Group	154
6.3	A p -Adic Analog of the Klein-Gordon Equation	155
6.4	The Cauchy Problem for the Non-Archimedean Klein-Gordon Equation	158
6.4.1	Twisted Vladimirov Pseudodifferential Operators	159
6.4.2	The Cauchy Problem for the p -Adic Klein-Gordon Equation	161
6.5	Further Results on the p -Adic Klein-Gordon Equation	165
7	Final Remarks and Some Open Problems	167
7.1	Zeta Functions, Adelic Riesz Kernels and Heat Equations	167
7.2	Fundamental Solutions and Operators of Bernstein-Sato Type	169

7.3	Parabolic-Type Equations and Markov Processes.....	170
7.4	Non-Archimedean Quantum Fields.....	170
References	171

Pseudodifferential Equations Over Non-Archimedean
Spaces

Zúñiga-Galindo, W.A.

2016, XVI, 175 p. 1 illus., Softcover
