

Contents

1	Introduction	1
1.1	What Is This Book About?	1
1.2	When Did This Topic Emerge?	2
1.3	Is This Topic Related to Sums of Random Numbers?	2
1.4	What Classical Results Should I Know?	3
1.5	Can You Show Me Some Nice Sample Results from This Topic?	5
1.6	How Does One Prove These Nice Results?	8
1.7	Can You Answer Your Own Questions Now?	9
1.8	Where Can I Find These Answers in This Book?	10
1.9	Why Is This Book Less Simple than These Samples?	10
1.10	Can You State These More General Limit Theorems?	11
1.11	Are the Proofs as Simple as for the Simple Samples?	12
1.12	Why Is the Iwasawa Cocycle so Important to You?	13
1.13	I Am Allergic to Local Fields. Is It Safe to Open This Book?	14
1.14	Why Are There so Many Chapters in This Book?	15
1.15	Whom Do You Thank?	16
 Part I The Law of Large Numbers		
2	Stationary Measures	19
2.1	Markov Operators	19
2.1.1	Markov Chains on Standard Borel Spaces	19
2.1.2	Measure-Preserving Markov Operators	20
2.1.3	Ergodicity of Markov Operators	23
2.2	Ergodicity and the Forward Dynamical System	24
2.3	Markov–Feller Operators	26
2.4	Stationary Measures and the Forward Dynamical System	27
2.5	The Limit Measures and the Backward Dynamical System	30
2.6	The Two-Sided Fibered Dynamical System	34
2.7	Proximal Stationary Measures	35

3	The Law of Large Numbers	37
3.1	Birkhoff Averages for Functions on $G \times X$	37
3.2	Breiman's Law of Large Numbers	39
3.3	The Law of Large Numbers for Cocycles	41
3.3.1	Random Walks on X	41
3.3.2	Cocycles	42
3.3.3	The Law of Large Cocycles	43
3.3.4	The Invariance Property	43
3.4	Convergence of the Covariance 2-Tensors	44
3.4.1	Special Cocycles	44
3.4.2	The Covariance Tensor	45
3.5	Divergence of Birkhoff Sums	48
4	Linear Random Walks	51
4.1	Linear Groups	51
4.2	Stationary Measures on $\mathbb{P}(V)$ for V Strongly Irreducible	54
4.3	Virtually Invariant Subspaces	58
4.4	Stationary Measures on $\mathbb{P}(V)$	60
4.5	Norms of Vectors and Norms of Matrices	63
4.6	The Law of Large Numbers on $\mathbb{P}(V)$	66
4.7	Positivity of the First Lyapunov Exponent	70
4.8	Proximal and Non-Proximal Representations	73
5	Finite Index Subsemigroups	77
5.1	The Expected Birkhoff Sum at the First Return Time	77
5.2	The First Return in a Finite Index Subsemigroup	79
5.3	Stationary Measures for Finite Extensions	82
5.4	Cocycles and Finite Extensions	84
5.5	A Simple Example (I)	85
Part II Reductive Groups		
6	Loxodromic Elements	89
6.1	Basics on Zariski Topology	89
6.2	Zariski Dense Semigroups in $SL(d, \mathbb{R})$	92
6.3	Zariski Closure of Semigroups	93
6.4	Proximality and Zariski Closure	97
6.5	Simultaneous Proximality	98
6.6	Loxodromic and Proximal Elements	100
6.7	Semisimple Real Lie Groups	101
6.7.1	Algebraic Groups and Maximal Compact Subgroups	101
6.7.2	Cartan Subspaces and Restricted Roots	102
6.7.3	Simple Restricted Roots and Weyl Chambers	102
6.7.4	The Cartan Projection	103
6.7.5	The Iwasawa Cocycle	103
6.7.6	The Jordan Projection	104
6.7.7	Example: $G = SL(d, \mathbb{R})$	105
6.7.8	Example: $G = SO(p, q)$	107
6.8	Representations of G	108
6.9	Interpretation with Representations of G	109
6.10	Zariski Dense Semigroups in Semisimple Lie Groups	112

7	The Jordan Projection of Semigroups	115
7.1	Convexity and Density	115
7.2	Products of Proximal Elements	116
7.3	Products of Loxodromic Elements	118
7.4	Convexity of the Limit Cone	120
7.5	The Group Δ_Γ	120
7.6	Asymptotic Expansion of Cross-Ratios	121
7.7	Strongly Transversally Loxodromic Elements	123
7.8	Density of the Group of Multicross-Ratios	124
8	Reductive Groups and Their Representations	127
8.1	Reductive Groups	127
8.2	The Iwasawa Cocycle for Reductive Groups	128
8.2.1	The Iwasawa Cocycle for Connected Reductive Groups	128
8.2.2	The Iwasawa Cocycle over an Archimedean Field	130
8.2.3	The Iwasawa Cocycle over a Local Field	131
8.3	Jordan Decomposition	133
8.4	Representations of Reductive Groups	134
8.4.1	Good Norms for Connected Groups	134
8.4.2	Good Norms in Induced Representations	135
8.4.3	Highest Weight	136
8.4.4	Proximal Representations	137
8.4.5	Construction of Representations	137
8.5	Representations and the Iwasawa Cocycle	138
8.6	Partial Flag Varieties	142
8.7	Algebraic Reductive \mathcal{S} -Adic Lie Groups	144
9	Zariski Dense Subsemigroups	147
9.1	Zariski Dense Subsemigroups	147
9.2	Loxodromic Elements in Semigroups	148
9.3	The Limit Set of Γ	150
9.4	The Jordan Projection of Γ	152
10	Random Walks on Reductive Groups	153
10.1	Stationary Measures on Flag Varieties	153
10.2	Stationary Measures on Grassmann Varieties	155
10.3	Moments and Exponential Moments	156
10.4	The Law of Large Numbers on G	158
10.5	Simplicity of the Lyapunov Exponents	161
10.6	A Simple Example (2)	166
Part III The Central Limit Theorem		
11	Transfer Operators over Contracting Actions	171
11.1	Contracting Actions	171
11.2	The Transfer Operator for Finite Groups	173
11.3	The Transfer Operator	175
11.4	Cocycles over μ -Contracting Actions	180
11.5	The Complex Transfer Operator	182
11.6	The Second Derivative of the Leading Eigenvalue	186

12	Limit Laws for Cocycles	191
12.1	Statement of the Limit Laws	191
12.2	The Central Limit Theorem	193
12.3	The Upper Law of the Iterated Logarithm	195
12.4	The Lower Law of the Iterated Logarithm	199
12.5	Large Deviations Estimates	202
13	Limit Laws for Products of Random Matrices	203
13.1	The Lipschitz Constant of the Cocycle	203
13.2	Contraction Speed on the Flag Variety	205
13.3	Comparing the Iwasawa Cocycle with Its Projection	207
13.4	Limit Laws for the Iwasawa Cocycle	210
13.5	The Iwasawa Cocycle and Cartan Projection	214
13.6	Limit Laws for the Cartan Projection	215
13.7	The Support of the Covariance 2-Tensor	217
13.8	A p-Adic Example	218
13.9	A Non-connected Example	220
13.9.1	Construction of the Example	220
13.9.2	Comparing Various Norms in Example (13.35)	220
13.9.3	Stationary Measures for Example (13.35)	221
13.9.4	The Central Limit Theorem for Example (13.35)	222
14	Regularity of the Stationary Measure	223
14.1	Regularity on the Projective Space	223
14.2	Regularity on the Flag Variety	227
14.3	Regularity on the Grassmann Variety	228
14.4	The Law of Large Numbers for the Coefficients	231
14.5	The Law of Large Numbers for the Spectral Radius	233
14.6	A Formula for the Variance	237
14.7	Limit Laws for the Norms	238
14.8	Limit Laws for the Coefficients	240
14.9	Limit Laws for the Spectral Radius	241
14.10	A Simple Example (3)	243
Part IV The Local Limit Theorem		
15	The Spectrum of the Complex Transfer Operator	249
15.1	The Essential Spectral Radius of $P_{i\theta}$	249
15.2	Eigenvalues of Modulus 1 of $P_{i\theta}$	251
15.3	The Residual Image Δ_μ of the Cocycle	255
16	The Local Limit Theorem for Cocycles	259
16.1	The Local Limit Theorem	259
16.2	The Local Limit Theorem for Smooth Functions	263
16.3	Approximation of Convex Sets	267
16.4	The Local Limit Theorem with Target for Cocycles	271

17 The Local Limit Theorem for Products of Random Matrices	273
17.1 Lifting the Coboundary	273
17.2 The Local Limit Theorem for \mathcal{S} -Adic Lie Groups	276
17.3 The Local Limit Theorem for the Iwasawa Cocycle	277
17.4 The Local Limit Theorem for the Cartan Projection	279
17.5 The Local Limit Theorem for the Norm	281
17.6 A Simple Example (4)	284
Appendix A Convergence of Sequences of Random Variables	287
A.1 Uniform Integrability	287
A.2 The Martingale Convergence Theorem	288
A.3 Kolmogorov's Law of Large Numbers	289
Appendix B The Essential Spectrum of Bounded Operators	295
B.1 Compact Operators	295
B.2 Bounded Operators and Their Adjoints	297
B.3 The Spectrum of Compact Operators	299
B.4 Fredholm Operators and the Essential Spectrum	302
B.5 The Measure of Non-compactness	306
B.6 A Result of Ionescu-Tulcea and Marinescu	310
Appendix C Bibliographical Comments	311
References	315
Index	321

Random Walks on Reductive Groups

Benoist, Y.; Quint, J.-F.

2016, XI, 323 p., Hardcover

ISBN: 978-3-319-47719-0
