

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Partial Differential Equations	1
1.2	Example: d'Alembert's Wave Equation	2
1.3	Types of Equations	3
1.4	Well Posed Problems	5
1.5	Approaches	6
<b>2</b>	<b>Preliminaries</b>	<b>9</b>
2.1	Real Numbers	9
2.2	Complex Numbers	10
2.3	Domains in $\mathbb{R}^n$	12
2.4	Differentiability	13
2.5	Ordinary Differential Equations	15
2.6	Vector Calculus	18
2.7	Exercises	23
<b>3</b>	<b>Conservation Equations and Characteristics</b>	<b>25</b>
3.1	Model Problem: Oxygen in the Bloodstream	25
3.2	Lagrangian Derivative and Characteristics	27
3.3	Higher-Dimensional Equations	32
3.4	Quasilinear Equations	35
3.5	Exercises	41
<b>4</b>	<b>The Wave Equation</b>	<b>45</b>
4.1	Model Problem: Vibrating String	45
4.2	Characteristics	47
4.3	Boundary Problems	51
4.4	Forcing Terms	53
4.5	Model Problem: Acoustic Waves	59
4.6	Integral Solution Formulas	61
4.7	Energy and Uniqueness	67
4.8	Exercises	69

<b>5</b>	<b>Separation of Variables</b> . . . . .	75
5.1	Model Problem: Overtones . . . . .	76
5.2	Helmholtz Equation . . . . .	76
5.3	Circular Symmetry . . . . .	81
5.4	Spherical Symmetry . . . . .	87
5.5	Exercises. . . . .	93
<b>6</b>	<b>The Heat Equation</b> . . . . .	97
6.1	Model Problem: Heat Flow in a Metal Rod . . . . .	97
6.2	Scale-Invariant Solution . . . . .	101
6.3	Integral Solution Formula . . . . .	103
6.4	Inhomogeneous Problem. . . . .	107
6.5	Exercises. . . . .	109
<b>7</b>	<b>Function Spaces</b> . . . . .	111
7.1	Inner Products and Norms . . . . .	111
7.2	Lebesgue Integration. . . . .	114
7.3	$L^p$ Spaces . . . . .	116
7.4	Convergence and Completeness . . . . .	119
7.5	Orthonormal Bases . . . . .	122
7.6	Self-adjointness. . . . .	125
7.7	Exercises. . . . .	128
<b>8</b>	<b>Fourier Series</b> . . . . .	131
8.1	Series Solution of the Heat Equation . . . . .	131
8.2	Periodic Fourier Series . . . . .	134
8.3	Pointwise Convergence. . . . .	138
8.4	Uniform Convergence. . . . .	141
8.5	Convergence in $L^2$ . . . . .	143
8.6	Regularity and Fourier Coefficients. . . . .	145
8.7	Exercises. . . . .	151
<b>9</b>	<b>Maximum Principles</b> . . . . .	155
9.1	Model Problem: The Laplace Equation. . . . .	155
9.2	Mean Value Formula . . . . .	161
9.3	Strong Principle for Subharmonic Functions. . . . .	165
9.4	Weak Principle for Elliptic Equations. . . . .	167
9.5	Application to the Heat Equation . . . . .	170
9.6	Exercises. . . . .	174
<b>10</b>	<b>Weak Solutions</b> . . . . .	177
10.1	Test Functions and Weak Derivatives. . . . .	177
10.2	Weak Solutions of Continuity Equations . . . . .	180
10.3	Sobolev Spaces. . . . .	187
10.4	Sobolev Regularity . . . . .	190

10.5	Weak Formulation of Elliptic Equations . . . . .	194
10.6	Weak Formulation of Evolution Equations . . . . .	196
10.7	Exercises. . . . .	202
<b>11</b>	<b>Variational Methods . . . . .</b>	<b>205</b>
11.1	Model Problem: The Poisson Equation. . . . .	206
11.2	Dirichlet's Principle . . . . .	207
11.3	Coercivity and Existence of a Minimum. . . . .	208
11.4	Elliptic Regularity. . . . .	214
11.5	Eigenvalues by Minimization . . . . .	217
11.6	Sequential Compactness . . . . .	224
11.7	Estimation of Eigenvalues . . . . .	227
11.8	Euler-Lagrange Equations. . . . .	234
11.9	Exercises. . . . .	237
<b>12</b>	<b>Distributions . . . . .</b>	<b>239</b>
12.1	Model Problem: Coulomb's Law . . . . .	239
12.2	The Space of Distributions . . . . .	242
12.3	Distributional Derivatives . . . . .	245
12.4	Fundamental Solutions . . . . .	248
12.5	Green's Functions. . . . .	252
12.6	Time-Dependent Fundamental Solutions. . . . .	257
12.7	Exercises. . . . .	259
<b>13</b>	<b>The Fourier Transform. . . . .</b>	<b>261</b>
13.1	Fourier Transform. . . . .	261
13.2	Tempered Distributions. . . . .	267
13.3	The Wave Kernel . . . . .	271
13.4	The Heat Kernel. . . . .	273
13.5	Exercises. . . . .	273
	<b>Appendix A: Analysis Foundations . . . . .</b>	<b>277</b>
	<b>References . . . . .</b>	<b>281</b>
	<b>Index . . . . .</b>	<b>283</b>

Introduction to Partial Differential Equations

Borthwick, D.

2016, XVI, 283 p. 68 illus., 61 illus. in color., Hardcover

ISBN: 978-3-319-48934-6
