

Contents

1	Introduction	1
2	Autonomous Dynamical Systems	11
2.1	Basic Stability Theory	12
2.2	Attractors	19
2.3	Applications	22
2.3.1	Application to Ecology: A Chemostat Model	22
2.3.2	Application to Epidemiology: The SIR Model	26
2.3.3	Application to Climate Change: The Lorenz-84 Model	29
3	Nonautonomous Dynamical Systems	35
3.1	Formulations of Nonautonomous Dynamical Systems	35
3.1.1	Process Formulation	36
3.1.2	Skew Product Flow Formulation	37
3.2	Nonautonomous Attractors	40
3.2.1	Nonautonomous Attractors for Processes	41
3.2.2	Nonautonomous Attractors for Skew Product Flows	48
3.3	Applications	53
3.3.1	Nonautonomous Chemostat Model	54
3.3.2	Nonautonomous SIR Model	62
3.3.3	Nonautonomous Lorenz-84 Model	64
4	Random Dynamical Systems	67
4.1	Noise Is Present Almost Everywhere	67
4.2	Formulation of Random Dynamical System and Random Attractor	68
4.2.1	Some Properties of the Random Attractor	74
4.2.2	Generation of Random Dynamical Systems	76
4.2.3	A Brief Introduction to Stochastic Differential Equations	77
4.2.4	Global Asymptotic Behavior of SDEs: Conjugation of RDS	82

4.3	Applications	86
4.3.1	Random Chemostat	86
4.3.2	Random and Stochastic SIR	91
4.3.3	Stochastic Lorenz Models	97
4.4	Stabilization of Dynamical Systems	100
References	105

Applied Nonautonomous and Random Dynamical
Systems

Applied Dynamical Systems

Caraballo, T.; Han, X.

2016, X, 108 p. 7 illus., 4 illus. in color., Softcover

ISBN: 978-3-319-49246-9
