Preface

The rapid deployment of new infrastructures based on network virtualization and cloud computing triggers new applications and services that in turn generate new constraints such as security and/or mobility. The International Conference on Mobile, Secure and Programmable Networking (MSPN) is aimed at providing a top forum for researchers and practitioners to present and discuss new trends in networking infrastructures, security, services, and applications while focusing on virtualization and cloud computing for networks, network programming, software-defined networks (SDN) and their security. In 2016, MSPN was hosted by CNAM Paris, which is one of the oldest teaching centers in Paris.

The call for papers resulted in a total of 37 submissions from all around the world. Every submission was assigned to at least three members of the Program Committee for review. The Program Committee decided to accept 17 papers. The accepted papers are from: Algeria, China, France, Greece, India, Ireland, Italy, Morocco, Tunisia, and Vietnam. One intriguing keynote from Prof. Ruben Milocco of the University of Comahue, Argentina, completed the technical program.

We would like to thank all who contributed to the success of this conference, in particular the members of the Program Committee (and the additional reviewers) for carefully reviewing the contributions and selecting a high-quality program. Our special thanks go to the members of the Organizing Committee for their great help.

We hope that all participants enjoyed this successful conference, made a lot of new contacts, engaged in fruitful discussions, and had a pleasant stay in Paris, France.
