1	Silicon Optical Interposers for High-Density Optical Interconnects	1
	Yutaka Urino, Takahiro Nakamura and Yasuhiko Arakawa	
1.1	Introduction	1
1.1.1	Trends and Requirements of Computing Systems in Data Centers	1
1.1.2	Problems with Electrical Interconnects	2
1.1.3	Optical Interconnects with Silicon Photonics	3
1.1.4	Vision for on-Chip Servers	3
1.1.5	Photonics-Electronics Convergence System Technology (PECST) Project	4
1.2	Photonics–Electronics Convergence System for Inter-chip Interconnects	4
1.2.1	Optical Interconnects for Short Reach	4
1.2.2	Integration Between Photonics and Electronics	5
1.2.3	Light Source Integration	6
1.2.4	Photonics–Electronics Convergence System with Silicon Optical Interposers	8
1.3	Configuration and Characteristics of Optical Components for Silicon Optical Interposers	9
1.3.1	Silicon Optical Waveguides	9
1.3.2	Hybridly Integrated On-Chip Light Sources	10
1.3.3	Silicon Optical Modulators	14
1.3.4	Germanium Photodetectors	15
1.4	Silicon Optical Interposers for High Bandwidth Density	16
1.4.1	Design Consideration for Bandwidth Density and Optical Power Budget	16
1.4.2	Integrated Fabrication Process	17
1.4.3	Data Link Experiments	18
1.4.4	Significance of Bandwidth Density	20

1.5	Silicon Optical Interposers for Wide Temperature Range Operation	20
1.5.1	Hybridly Integrated Athermal Light Sources and Their Thermal Characteristics	21
1.5.2	Optical Modulators and Their Thermal Characteristics	23
1.5.3	Photodetectors and Their Thermal Characteristics	25
1.5.4	Data Link Experiments Over Wide Temperature Range	26
1.6	25-Gbps Data Links Using Silicon Optical Interposers and FPGA Transceivers	28
1.7	Advanced Fabrication Process and Optical Components for Wider Bandwidth in Future	30
1.7.1	Hybridly Integrated 1200-Channel Light Source	30
1.7.2	High-Speed Ring-Resonator-Based Optical Modulators	31
1.7.3	High-Speed Germanium Photodetectors with Low Contact Resistance	31
1.7.4	300-mm Wafer Processes with ArF Immersion Lithography for WDM	32
1.8	Perspectives on Inter-chip Interconnects	32
1.8.1	Vision for On-Board Datacenters	32
1.9	Optical I/O Cores	33
1.9.1	Further Efficient Interconnects for On-Board Datacenters	35
1.10	Conclusion	35
	References	36
2	Silicon Quantum Photonics	41
	Damien Bonneau, Joshua W. Silverstone and Mark G. Thompson	
2.1	Introduction	41
2.1.1	Quantum Information	43
2.1.2	Optical Requirements for Quantum Applications	45
2.1.3	Scaling up Quantum Optics	48
2.1.4	Silicon Quantum Photonics	48
2.2	Linear Optics	49
2.2.1	Beam Splitter	50
2.2.2	Phase Shifter	52
2.3	Photon Sources	53
2.3.1	Requirements for Photon Sources	54
2.3.2	A Brief Summary of SFWM Experiments in SOI	54
2.3.3	Theory of SFWM Sources	55
2.3.4	Silicon Waveguide Photon-Pair Sources	57
2.3.5	Ring Resonator	62
2.4	On-Chip Detectors	69

2.5	Integration	70
2.5.1	Multiple Sources	71
2.5.2	Sources and Filters	72
2.5.3	Multiple Sources and Interferometers	74
2.6	Outlook	75
2.6.1	Conclusion	75
	References	76
3	Athermal Silicon Photonics	83
