

Contents

List of Figures	XIII
List of Tables	XV
1 Introduction	1
2 NURBS Curves	5
2.1 Basics	5
2.1.1 Properties of NURBS curves	7
2.1.2 Recursion formula	9
2.1.3 Curve approximation	13
2.2 Application in optimization	14
3 Modeling: Kinematics and Dynamics of Redundant Robots	15
3.1 Projection Equation	15
3.2 Modeling example: subsystem motor, gear, arm	18
4 Approaches to Minimum-Time Trajectory Planning	23
4.1 Minimum-time optimization problem	23
4.2 Optimization basics	25
4.3 Algorithms for redundant manipulators	26
4.3.1 First-order inverse kinematics algorithms	26
4.3.2 Second-order inverse kinematics algorithm	31
4.3.3 Null space projection	32
4.3.4 Kinematic manipulability	33
	XI

4.3.5	Dynamic manipulability	35
4.3.6	Manipulability along known paths	38
4.3.7	B-spline-based minimum-time trajectories	41
5	Joint Space Decomposition Approach	45
5.1	Method	46
5.1.1	Use of B-spline curves	48
5.2	Optimization problem	48
5.3	Initial trajectories	50
5.4	Remaining challenges	50
6	Examples	53
6.1	Planar robot	53
6.1.1	Forward kinematics	54
6.1.2	Inverse kinematics $q_r = q_1$	56
6.1.3	Inverse kinematics $q_r = q_2$	57
6.1.4	Inverse kinematics $q_r = q_3$	59
6.1.5	Avoidance of singularities due to choice of inverse kinematics approach	61
6.1.6	Kinematic chain	63
6.1.7	Dynamic model	66
6.1.8	Optimization Results	68
6.2	Spatial robot	74
6.2.1	Forward kinematics	74
6.2.2	Inverse kinematics $q_r = q_1$	77
6.2.3	Optimization results	80
7	Conclusion	87
Appendix A and B Appendices are available to download free of charge on springer.com .
