1	Spacecraft Autonomy Challenges for Next-Generation Space Missions	1
	Joseph A. Starek, Behçet Açıkmeşe, Issa A. Nesnas and Marco Pavone	
1.1	Introduction	1
1.1.1	High-Level Challenges and High-Priority Technologies for Space Autonomous Systems	3
1.2	Relative Guidance Algorithmic Challenges for Autonomous Spacecraft	5
1.2.1	Scope	5
1.2.2	Need	6
1.2.3	State of the Art.	6
1.2.4	Challenges and Future Directions	11
1.3	Extreme Mobility	19
1.3.1	Scope	19
1.3.2	Need	20
1.3.3	State of the Art.	22
1.3.4	Challenges and Future Directions	24
1.4	Microgravity Mobility	29
1.4.1	Scope	29
1.4.2	Need	30
1.4.3	State of the Art.	33
1.4.4	Challenges and Future Directions	35
1.5	Conclusions	40
	References.	41
2	New Guidance, Navigation, and Control Technologies for Formation Flying Spacecraft and Planetary Landing	49
	Fred Y. Hadaegh, Andrew E. Johnson, David S. Bayard, Behçet Açıkmeşe, Soon-Jo Chung and Raman K. Mehra	
2.1	Introduction	49

2.2	GN&C Technologies for Planetary Landing in Hazardous Terrain	50
2.2.1	Introduction	50
2.2.2	Design Considerations	52
2.2.3	Case Study 1: Mars Robotic System	53
2.2.4	Case Study 2: Crewed Lunar System.	55
2.2.5	System Comparison	57
2.3	Phase Synchronization Control of Spacecraft Swarms	58
2.3.1	Problem Statement—Controlling the Phase Differences in Periodic Orbits.	59
2.3.2	Phase Synchronization Control Law with Adaptive Graphs	61
2.3.3	Main Stability Theorems and Simulation Results	62
2.4	Application of Probabilistic Guidance to Swarms of Spacecraft Operating in Earth Orbit.	64
2.4.1	Introduction	64
2.4.2	Probabilistic Guidance Problem	65
2.4.3	Probabilistic Guidance Algorithm (PGA)	66
2.4.4	Adaptation of PGA to Earth Orbiting Swarms	68
2.5	Nonlinear State Estimation And Sensor Optimization Problems for Detection of Space Collision Events.	70
2.5.1	LEO Sensor Constellation Design and Collision Event Testbed	71
2.5.2	Satellite Collision Modeling and Estimation	73
2.6	Conclusion.	77
	References.	78
3	Aircraft Autonomy	81
	Piero Miotto, Leena Singh, James D. Paduano, Andrew Clare, Mary L. Cummings and Lesley A. Weitz	
3.1	Introduction	81
3.1.1	Challenges to the Safe Integration of UAVs in the National Airspace	83
3.1.2	Technical Enhancements for Safe Insertion of UAVs in the NAS	84
3.2	On-Board Air Autonomy Systems Needs	86
3.2.1	Challenges to Integration of UAVs in the NAS	86
3.2.2	Technical Enhancements for Improved In-Air autonomy—Key Technologies	87
3.2.3	Conclusions: A Road-Map to Address the Technical Challenges	89
3.3	Human-Automation Collaboration	92
3.3.1	Challenges in the Collaborative Human-Automation Scheduling Process	92

3.3.2	Candidate Methods in Human-Automation Collaborative Scheduling	94
3.3.3	Technical Enhancements needed for Humans Interactions with Scheduling Algorithms	95
3.3.4	Conclusions	97
3.4	Autonomy Evolution for Air Traffic Control	98
3.4.1	Challenges and Limitations of Current Air Traffic Management System	99
3.4.2	Enhancements Made Within ATC System	99
3.4.3	Technical Enhancements needed in the Evolution of Airborne and Ground-Based Technologies	101
3.4.4	Conclusions and Proposed Road-Map	103
	References.	104
4	Challenges in Aerospace Decision and Control:	
	Air Transportation Systems	109
	Hamsa Balakrishnan, John-Paul Clarke, Eric M. Feron, R. John Hansman and Hernando Jimenez	
4.1	Introduction	109
4.2	Key NextGen Topics.	110
4.3	Supporting Technology Research Challenges	111
4.3.1	Design of Automation with Graceful Degradation Modes	112
4.3.2	System Verification and Validation (V&V)	112
4.3.3	Large-Scale, Real-Time Optimization Algorithms	113
4.3.4	Multi-Objective, Multi-Stakeholder, Optimization Frameworks	114
4.4	Domain-Specific Research Challenges	114
4.4.1	Airport Arrival Management	114
4.4.2	Airport Departure Processes	116
4.4.3	The Trip is Not Over: Passenger Management in the Terminals	120
4.4.4	Domain-Specific Contributions: Abstract Modeling Approaches	123
	References.	132
5	From Design to Implementation: An Automated, Credible Autocoding Chain for Control Systems	137
	Timothy Wang, Romain Jobredeaux, Heber Herencia, Pierre-Loïc Garoche, Arnaud Dieumegard, Éric Feron and Marc Pantel	
5.1	Introduction	137
5.2	Credible Autocoding Framework	139
5.2.1	Input and Output Languages of the Framework	141

5.3	Control Semantics	142
5.3.1	Control System Stability and Boundedness	143
5.3.2	Prototype Tool-Chain	143
5.3.3	Control Semantics in Simulink and Gene-Auto	144
5.3.4	Annotation Blocks and Behaviors in the Model	146
5.3.5	Closed-Loop Stability with Bounded Input	147
5.3.6	Expressing the Observer-Based Fault-Detection Semantics	148
5.3.7	Control Semantics at the Level of the C Code	149
5.3.8	Closed Loop Semantics	150
5.3.9	Control Semantics in PVS	151
5.4	Autocoding with Control Semantics	153
5.5	Building the Input Model	153
5.6	Basics of Program Verification	154
5.6.1	Hoare Logic and Deductive Verification	156
5.6.2	Predicate Transformers	157
5.6.3	Strongest Post-condition	159
5.7	Translation Process for a Simple Dynamical System	159
5.8	Gene-Auto+: A Prototype Credible Autocoder	161
5.8.1	Gene-Auto: Translation	161
5.8.2	Translation of Annotative Blocks	162
5.9	Translation and Insertion of the <i>System Block</i>	164
5.10	Translation of the <i>Quadratic</i> Blocks	165
5.10.1	Types of Quadratic Blocks	165
5.10.2	Insertion of Ellipsoid Objects	165
5.11	Computing the Strongest Post-condition	167
5.11.1	Affine Transformation	168
5.11.2	S-Procedure	169
5.11.3	Verification of the Strongest Post-condition	172
5.12	Automatic Verification of Control Semantics	172
5.12.1	From C Code to PVS Theorems	173
5.12.2	Theory Interpretation	175
5.12.3	Generically Discharging the Proofs in PVS	176
5.12.4	The <code>pvs-ellipsoid</code> Plugin to Frama-C	177
5.12.5	Checking Inclusion of the Propagated Ellipsoid	177
5.13	Related Works	178
5.14	Conclusion	178
	References	179

Advances in Control System Technology for Aerospace
Applications

Feron, E. (Ed.)

2016, XII, 180 p. 75 illus., 65 illus. in color., Softcover
