

# Contents

- 1 Introduction . . . . . 1**
  - 1.1 Problems in Newtonian Cosmology. . . . . 2
  - 1.2 The Standard Model of Cosmology. . . . . 3
    - 1.2.1 Hubble’s Law. . . . . 6
    - 1.2.2 Big Bang Nucleosynthesis . . . . . 7
    - 1.2.3 Cosmic Microwave Background . . . . . 8
  - 1.3 Evidence for New Physics . . . . . 9
    - 1.3.1 Inflation. . . . . 10
    - 1.3.2 Baryogenesis . . . . . 11
    - 1.3.3 Dark Matter . . . . . 12
    - 1.3.4 Cosmological Constant Problems . . . . . 13
  - 1.4 Age and Size of the Universe. . . . . 14
  - 1.5 Cosmological Models Beyond General Relativity . . . . . 16
  - References. . . . . 16
- 2 General Relativity. . . . . 17**
  - 2.1 Scalars, Vectors and Tensors . . . . . 17
  - 2.2 Geodesic Equations. . . . . 20
    - 2.2.1 Newtonian Mechanics . . . . . 20
    - 2.2.2 Relativistic Mechanics . . . . . 21
  - 2.3 Energy and Momentum in Flat Spacetime . . . . . 23
  - 2.4 Energy-Momentum Tensor in Flat Spacetime . . . . . 24
  - 2.5 Curved Spacetime . . . . . 26
  - 2.6 Field Theory in Flat and Curved Spacetimes . . . . . 27
  - 2.7 Einstein Equations . . . . . 29
  - Problems. . . . . 32
  - References. . . . . 33

<b>3</b>	<b>The Standard Model of Particle Physics.</b>	<b>35</b>
3.1	Fermions	37
3.1.1	Leptons	38
3.1.2	Quarks	38
3.2	Bosons	39
3.2.1	Gauge Bosons	39
3.2.2	Higgs Particle.	41
3.3	Feynman Diagrams	42
3.4	Beyond the Minimal Standard Model of Particle Physics	44
3.4.1	Supersymmetric Models.	45
3.4.2	Grand Unification Theories	46
3.4.3	Heavy Neutrinos.	48
3.4.4	Peccei-Quinn Model	49
3.5	Probabilities of Reactions Among Particles	49
	Problems.	52
	References.	52
<b>4</b>	<b>Cosmological Models</b>	<b>53</b>
4.1	Friedmann-Robertson-Walker Metric	54
4.2	Friedmann Equations.	56
4.3	Cosmological Models	57
4.3.1	Einstein Universe	58
4.3.2	Matter Dominated Universe	58
4.3.3	Radiation Dominated Universe	60
4.3.4	Vacuum Dominated Universe	61
4.4	Basic Properties of the FRW Metric	62
4.5	Age of the Universe	64
4.6	$\Lambda$ CDM Model	65
4.7	Destiny of the Universe.	68
	Problems.	70
	References.	70
<b>5</b>	<b>Kinetics and Thermodynamics in Cosmology</b>	<b>71</b>
5.1	Introduction	71
5.2	Thermal Equilibrium in the Early Universe	71
5.2.1	General Features.	71
5.2.2	Kinetic Equation.	76
5.2.3	Plasma Heating and Entropy Conservation.	80
5.3	Freezing of Species.	82
5.3.1	Decoupling and Gershtein-Zeldovich Bound.	82
5.3.2	Freezing of Non-relativistic Particles	86
5.4	Neutrino Spectrum and Effective Number of Neutrino Species.	90
	Problems.	92
	References.	92

<b>6</b>	<b>Inflation</b>	93
6.1	Introduction and History	93
6.2	Problems of Pre-inflationary Cosmology	94
6.2.1	Kinematics and Main Features of Inflation	95
6.2.2	Flatness Problem	96
6.2.3	Horizon Problem	96
6.2.4	Origin of the Cosmological Expansion	98
6.2.5	Smoothing Down the Universe and Creation of Primordial Density Perturbations	98
6.2.6	Magnetic Monopole Problem	99
6.3	Mechanisms of Inflation	101
6.3.1	Canonical Scalar Inflaton with Power Law Potential	101
6.3.2	Other Mechanisms of Inflation	103
6.4	Universe Heating	105
6.4.1	Perturbative Production	106
6.4.2	Non-perturbative Phenomena	109
6.4.3	Parametric Resonance	112
6.4.4	Particle Production in a Gravitational Field	115
6.5	Generation of Gravitational Waves	117
6.6	Generation of Density Perturbations	121
	References	125
<b>7</b>	<b>Baryogenesis</b>	127
7.1	Observational Data	127
7.2	General Features of Baryogenesis Models	129
7.2.1	Sakharov Principles	129
7.2.2	CP Breaking in Cosmology	131
7.3	Models of Baryogenesis	132
7.3.1	Baryogenesis by Heavy Particle Decays	133
7.3.2	Electroweak Baryogenesis	135
7.3.3	Baryo-Through-Leptogenesis	138
7.3.4	Evaporation of Primordial Black Holes	139
7.3.5	Spontaneous Baryogenesis	143
7.3.6	Baryogenesis by Condensed Scalar Baryons	149
7.4	Cosmological Antimatter	151
	Problems	156
