

# Contents

<b>1</b>	<b>Classical Scattering Theory</b>	<b>1</b>
1.1	Relative Motion of Projectile and Target	1
1.2	Deflection Function	2
1.2.1	Kepler–Coulomb Potential	5
1.2.2	Inverse-Power Potentials	6
1.2.3	Lennard–Jones Potential	9
1.3	Scattering Angle and Scattering Cross Sections	11
1.3.1	Kepler–Coulomb Potential	13
1.3.2	Inverse-Power Potentials	14
1.3.3	Lennard–Jones Potential	16
1.4	Classical Scattering in Two Spatial Dimensions	17
	References	21
<b>2</b>	<b>Elastic Scattering by a Conservative Potential</b>	<b>23</b>
2.1	Scattering Amplitude and Scattering Cross Section	23
2.2	Lippmann–Schwinger Equation and Born Approximation	26
2.3	Radially Symmetric Potentials	28
2.3.1	Angular Momentum	28
2.3.2	Partial-Waves Expansion	29
2.3.3	Scattering Phase Shifts	30
2.3.4	Normalization of Radial Wave Functions	33
2.3.5	Radial Lippmann–Schwinger Equation	34
2.3.6	<i>S</i> -Matrix	36
2.3.7	Determination of the Scattering Phase Shifts	37
2.3.8	Near-Threshold Behaviour of the Scattering Phase Shifts	38
2.3.9	Levinson’s Theorem	45
2.3.10	Potential Resonances (Shape Resonances)	49
2.3.11	Scattering Cross Sections	55
2.4	The WKB Approximation	58
2.4.1	Definition and Accuracy of WKB Wave Functions	58
2.4.2	Connection Across a Classical Turning Point	60

2.4.3	WKB Phase Shifts . . . . .	67
2.5	Coulombic Potentials . . . . .	70
2.5.1	Pure Coulomb Potential . . . . .	71
2.5.2	Modified Coulomb Potential; General Considerations . .	75
2.5.3	Modified Repulsive Coulomb Potential . . . . .	78
2.5.4	Modified Attractive Coulomb Potential, Quantum-Defect Theory . . . . .	81
2.6	Potentials Falling off as $1/r^\alpha$ , $\alpha > 2$ . . . . .	90
2.6.1	Near-Threshold Behaviour of Scattering Phase Shifts . .	90
2.6.2	The Special Case $2l + 3 = \alpha$ . . . . .	93
2.6.3	Modified Effective-Range Expansions . . . . .	95
2.6.4	Peripheral Scattering . . . . .	98
2.6.5	The Lennard–Jones Potential . . . . .	99
2.7	Potentials with Inverse-Square Tails . . . . .	101
2.7.1	Pure Inverse-Square Potential . . . . .	101
2.7.2	Modified Inverse-Square Potential . . . . .	106
2.7.3	Example: Inverse-Square Potential with Hard Sphere . .	110
2.8	Nonvanishing Angular Momentum of Projectile and/or Target . .	113
2.8.1	General Formalism for Treating Spins . . . . .	113
2.8.2	Spin- $\frac{1}{2}$ Projectile with Spin-Zero Target . . . . .	119
2.8.3	Application to Mixed Spin States . . . . .	124
2.9	When Projectile and Target Are Indistinguishable . . . . .	126
2.9.1	Spinless Bosons . . . . .	126
2.9.2	Spin- $\frac{1}{2}$ Fermions . . . . .	130
	References . . . . .	133
<b>3</b>	<b>Internal Excitation, Inelastic Scattering . . . . .</b>	<b>137</b>
3.1	Coupled-Channel Equations and Scattering Cross Sections . . . .	137
3.2	Coupled-Channel Lippmann–Schwinger Equation and Born Approximation . . . . .	140
3.3	Radial Coupled-Channel Equations . . . . .	142
3.4	Absorption . . . . .	146
3.5	Feshbach Resonances . . . . .	147
3.5.1	Single Isolated Feshbach Resonance . . . . .	148
3.5.2	Interfering Resonances . . . . .	156
3.5.3	Resonances in the Presence of Several Open Channels . .	161
3.6	Coulombic Potentials, General Theory . . . . .	163
3.6.1	Scattering Cross Sections . . . . .	163
3.6.2	Partial-Waves Expansion . . . . .	164
3.7	Attractive Coulomb Potentials, Multichannel Quantum-Defect Theory . . . . .	166
3.7.1	Perturbed Rydberg Series . . . . .	167
3.7.2	Two Coupled Coulombic Channels . . . . .	169
3.7.3	More than Two Coupled Coulombic Channels . . . . .	177
	References . . . . .	183

<b>4</b>	<b>Special Topics</b>	185
4.1	Deep Potentials Falling off Faster than $1/r^2$ Asymptotically	185
4.1.1	Near-Threshold Quantization	185
4.1.2	Quantum Reflection	209
4.1.3	Elastic Scattering	220
4.1.4	Nonvanishing Angular Momentum	229
4.1.5	Summary	232
4.1.6	Relation to Other Approaches	234
4.2	Near-Threshold Feshbach Resonances	236
4.2.1	Motivation	236
4.2.2	Threshold-Insensitive Parametrization of a Feshbach Resonance	238
4.2.3	Influence on the Scattering Length	241
4.2.4	Influence on the Bound-State Spectrum	243
4.2.5	Relation to the Empirical Formula (4.157)	246
4.3	Quantum Description of Scattering in Two Spatial Dimensions	248
4.3.1	Scattering Amplitude and Scattering Cross Section	249
4.3.2	Lippmann–Schwinger Equation and Born Approximation	250
4.3.3	Partial-Waves Expansion and Scattering Phase Shifts	251
4.3.4	Near-Threshold Behaviour of the Scattering Phase Shifts	254
4.3.5	The Case $m = 0$ , $s$ -Waves in Two Dimensions	255
4.3.6	Rutherford Scattering in Two Dimensions	259
	References	261
	<b>Appendix A Scaling</b>	267
	A.1 Classical Mechanics	267
	A.2 Quantum Mechanics	269
	References	271
	<b>Appendix B Special Functions</b>	273
	B.1 Legendre Polynomials, Spherical Harmonics	273
	B.2 Error Function	274
	B.3 Gamma Function	274
	B.4 Bessel Functions	275
	B.5 Confluent Hypergeometric Functions, Coulomb Functions, Whittaker’s Function	279
	References	281
