1	Introduction	1
1.1	General Concepts of Concrete Structures	1
1.1.1	General Concepts of Reinforced Concrete Structures	1
1.1.2	Mechanism of Collaboration of Concrete and Steel	3
1.1.3	General Concepts of Prestressed Concrete Structures	3
1.1.4	Members of Concrete Structures	4
1.1.5	Advantages and Disadvantages of Concrete Structures	5
1.2	Historical Development of Concrete Structures	6
1.2.1	Birth of Concrete Structures	6
1.2.2	Development of Concrete Materials	7
1.2.3	Development of Structural Systems	9
1.2.4	Development in Theoretical Research of Concrete Structures	10
1.2.5	Experiments and Numerical Simulation of Concrete Structures	14
1.3	Applications of Concrete Structures	15
1.4	Characteristics of the Course and Learning Methods	17
2	Mechanical Properties of Concrete and Steel Reinforcement	21
2.1	Strength and Deformation of Steel Reinforcement	21
2.1.1	Types and Properties of Steel Reinforcement	21
2.1.2	Strength and Deformation of Reinforcement Under Monotonic Loading	24

2.1.3	Cold Working and Heat Treatment of Reinforcement	29
2.1.4	Creep and Relaxation of Reinforcement	30
2.1.5	Strength and Deformation of Reinforcement Under Repeated and Reversed Loading	30
2.2	Strength and Deformation of Concrete	33
2.2.1	Compression of Concrete Cubes	33
2.2.2	Concrete Under Uniaxial Compression	36
2.2.3	Concrete Under Uniaxial Tension	44
2.2.4	Concrete Under Multiaxial Stresses	46
2.2.5	Strength and Deformation of Concrete Under Repeated Loading	49
2.2.6	Deformation of Concrete Under Long-Term Loading	50
2.2.7	Shrinkage, Swelling, and Thermal Deformation of Concrete	52
	Appendix	55
3	Bond and Anchorage	59
3.1	Bond and Mechanism of Bond Transfer	59
3.1.1	Bond Before Concrete Cracking	59
3.1.2	Bond After Concrete Cracking	60
3.1.3	Bond Tests	62
3.1.4	Mechanism and Failure Mode of Bond	64
3.1.5	Mechanism of Lap Splice	65
3.2	Bond Strength Between Concrete and Reinforcement	65
3.2.1	Bond Strength	65
3.2.2	Influential Factors on Bonding Strength	67
3.3	Anchorage of Steel Bars in Concrete	68
3.3.1	Anchorage Length	68
3.3.2	Practical Equation for Anchorage Length Calculation	71
3.3.3	Hooked Anchorages	71
4	Tension and Compression Behavior of Axially Loaded Members	75
4.1	Engineering Applications and Details of Members	75
4.2	Analysis of Axially Tensioned Structural Members	77
4.2.1	Experimental Study on Axially Tensioned Structural Members	77
4.2.2	Relationship Between Tensile Force and Deformation	80

4.3	Applications of the Bearing Capacity Equations for Axially Tensioned Members	84
4.3.1	Bearing Capacity Calculation of Existing Structural Members	84
4.3.2	Cross-Sectional Design of New Structural Members	84
4.4	Analysis of Axially Compressed Short Columns	85
4.4.1	Experimental Study on a Short Column	85
4.4.2	Load Versus Deformation of Short Columns	86
4.4.3	Mechanical Behavior of Short Columns with Sustained Loading	89
4.5	Analysis of Axially Compressed Slender Columns	93
4.5.1	Experimental Study on a Slender Column	93
4.5.2	Stability Coefficient	95
4.5.3	Equation for Ultimate Capacity of Axially Compressed Columns	96
4.6	Applications of the Bearing Capacity Equation for Axially Compressed Members	97
4.6.1	Bearing Capacity Calculation of Existing Structural Members	97
4.6.2	Cross-Sectional Design of New Structural Members	97
4.7	Analysis of Spiral Columns	99
4.7.1	Experiment Study on Spiral Columns	99
4.7.2	Ultimate Compressive Capacities of Spiral Columns	100
	Appendix	106
5	Bending Behavior of Flexural Members	107
5.1	Engineering Applications	107
5.2	Mechanical Characteristics and Reinforcement Type of Flexural Members	107
5.3	Sectional Dimension and Reinforcement Detailing of Flexural Members	110
5.4	Experimental Study on Flexural Members	110
5.4.1	Test Setup	110
5.4.2	Experimental Results	112
5.5	Analysis of Singly Reinforced Rectangular Sections	116
5.5.1	Basic Assumptions	116
5.5.2	Analysis Before Cracking	119
5.5.3	Analysis at Cracking	120
5.5.4	Analysis After Cracking	124
5.5.5	Analysis at Ultimate State	128

5.6	Simplified Analysis of Singly Reinforced Rectangular Sections	135
5.6.1	Equivalent Rectangular Stress Block	135
5.6.2	Compression Zone Depth of a Balanced-Reinforced Section.	137
5.6.3	Calculation of the Flexural Bearing Capacity of a Singly Reinforced Rectangular Section	138
5.7	Applications of the Equations for Flexural Bearing Capacities of Singly Reinforced Rectangular Sections	142
5.7.1	Bearing Capacity Calculation of Existing Structural Members	142
5.7.2	Cross-Sectional Design of New Structural Members	146
5.8	Analysis of Doubly Reinforced Sections.	148
5.8.1	Detailing Requirement on Doubly Reinforced Sections	149
5.8.2	Experimental Results	149
5.8.3	Analysis of Doubly Reinforced Sections.	150
5.8.4	Simplified Calculation of the Flexural Bearing Capacities of Doubly Reinforced Sections.	154
5.9	Applications of the Equations for Flexural Bearing Capacities of Doubly Reinforced Rectangular Sections.	156
5.9.1	Bearing Capacity Calculation of Existing Structural Members	156
5.9.2	Cross-Sectional Design of New Structural Members	158
5.10	Analysis of T Sections.	161
5.10.1	Effective Compressed Flange Width of T Beams.	161
5.10.2	Simplified Calculation Method for the Flexural Bearing Capacities of T Sections.	161
5.11	Applications of the Equations for Flexural Bearing Capacities of T Sections.	165
5.11.1	Bearing Capacity Calculation of Existing Structural Members	165
5.11.2	Cross-Sectional Design of New Structural Members	167
5.12	Deep Flexural Members	169
5.12.1	Basic Concepts and Applications.	169
5.12.2	Mechanical Properties and Failure Modes of Deep Flexural Members	171
5.12.3	Flexural Bearing Capacities of Deep Beams	172

5.12.4	Flexural Bearing Capacities of Short Beams	173
5.12.5	Unified Formulae for the Flexural Bearing Capacities of Deep Flexural Members	174
5.13	Ductility of Normal Sections of Flexural Members	175
6	Compression and Tension Behavior of Eccentrically Loaded Members	183
6.1	Engineering Applications and Reinforcement Detailing	183
6.2	Interaction Diagram	185
6.3	Experimental Studies on Eccentrically Compressed Members	187
6.3.1	Experimental Results	187
6.3.2	Analysis of Failure Modes	190
6.3.3	N_{cu} – M_u Interaction Diagram	191
6.3.4	Slenderness Ratio Influence on Ultimate Capacities of Members	191
6.4	Two Key Issues Related to Analysis of Eccentrically Compressed Members	193
6.4.1	Additional Eccentricity e_a	193
6.4.2	Moment Magnifying Coefficient	193
6.5	Analysis of Eccentrically Compressed Members of Rectangular Section	196
6.5.1	Ultimate Bearing Capacities of Large Eccentrically Compressed Sections	197
6.5.2	Ultimate Bearing Capacities of Small Eccentrically Compressed Sections	200
6.5.3	Balanced Sections	204
6.5.4	Simplified Calculation Method to Determine Ultimate Bearing Capacities of Eccentrically Compressed Sections	205
6.6	Applications of the Ultimate Bearing Capacity Equations for Eccentrically Compressed Members	210
6.6.1	Design of Asymmetrically Reinforced Sections	210
6.6.2	Evaluation of Ultimate Compressive Capacities of Existing Asymmetrically Reinforced Eccentrically Compressed Members	223
6.6.3	Design of Symmetrically Reinforced Sections	225
6.6.4	Evaluation of Ultimate Compressive Capacities of Existing Symmetrically Reinforced Eccentrically Compressed Members	231

6.7	Analysis of Eccentrically Compressed Members of I Section	231
6.7.1	Basic Equations for Ultimate Compressive Capacities of Large Eccentrically Compressed I Sections	231
6.7.2	Basic Equations for Ultimate Compressive Capacities of Small Eccentrically Compressed I Sections	233
6.8	Applications of the Ultimate Capacity Equations for Eccentrically Compressed Members of I Section	234
6.8.1	Design of I Sections	234
6.8.2	Evaluation of the Ultimate Compressive Capacities of Existing Eccentrically Compressed Members of I Sections	239
6.9	Analysis of Eccentrically Compressed Members with Biaxial Bending	240
6.10	Analysis of Eccentrically Compressed Members of Circular Section	242
6.10.1	Stress and Strain Distributions Across the Section at Failure	242
6.10.2	Calculation of Normal Section's Ultimate Bearing Capacities	244
6.10.3	Simplified Calculation of Ultimate Bearing Capacities	247
6.11	Analysis of Eccentrically Tensioned Members.	250
6.11.1	Ultimate Tension Capacities of Small Eccentrically Tensioned Sections	250
6.11.2	Ultimate Tension Capacities of Large Eccentrically Tensioned Sections	251
6.12	Applications of the Ultimate Capacity Equations for Eccentrically Tensioned Members.	253
6.12.1	Design of Small Eccentrically Tensioned Sections	253
6.12.2	Evaluation of Ultimate Capacities of Existing Small Eccentrically Tensioned Sections	253
6.12.3	Design of Large Eccentrically Tensioned Sections	254
6.12.4	Evaluation of Ultimate Capacities of Existing Large Eccentrically Tensioned Sections	254

7	Shear	261
7.1	Engineering Applications and Reinforcement	261
7.2	Behavior of Flexural Members Failing in Shear	262
7.2.1	Behavior of Beams Without Web Reinforcement	263
7.2.2	Experimental Study on Beams with Web Reinforcement	275
7.2.3	Shear Resistance Mechanism of Beams with Web Reinforcement	276
7.2.4	Analysis of Flexure–Shear Sections of Beams with Web Reinforcement	278
7.2.5	Practical Calculation Equations for Shear Capacities of Beams with Web Reinforcement	281
7.3	Applications of Shear Capacity Formulae for Flexural Members	289
7.3.1	Inclined Section Design Based on Shear Capacity	289
7.3.2	Shear Capacity Evaluation of Inclined Sections of Existing Members	299
7.3.3	Discussion on Shear Forces for the Design of Beams	300
7.4	Measures to Ensure the Flexural Capacities of Inclined Cross Sections in Flexural Members	303
7.4.1	Flexural Capacities of Inclined Cross Sections	303
7.4.2	Moment Capacity Diagram	304
7.4.3	Detailing Requirements to Ensure the Flexural Capacities of Inclined Sections with Bent-up Bars	305
7.4.4	Detailing Requirements to Ensure the Flexural Capacities of Inclined Sections When Longitudinal Bars Are Cut off	307
7.4.5	Illustration of Bent-up and Cutoff of Bars	309
7.4.6	Anchorage of Longitudinal Reinforcement at the Supports	310
7.5	Shear Capacities of Eccentrically Loaded Members	311
7.5.1	Experimental Results	311
7.5.2	Factors Influencing Shear Capacities of Eccentrically Loaded Members	313
7.5.3	Calculation of Shear Capacities of Eccentrically Compressed Members	315
7.5.4	Calculation of Shear Capacities of Eccentrically Tensioned Members	316

7.5.5	Shear Capacities of Columns of Rectangular Sections Under Bidirectional Shear	317
7.5.6	Shear Capacities of Columns of Circular Sections	319
7.6	Applications of Shear Capacity Formulae for Eccentrically Loaded Members.	321
7.7	Shear Performance of Deep Flexural Members and Structural Walls	324
7.7.1	Shear Performance of Deep Flexural Members	324
7.7.2	Shear Performance of Structural Walls	325
7.8	Shear Transfer Across Interfaces Between Concretes Cast at Different Times	328
8	Torsion	335
8.1	Engineering Applications and Reinforcement Detailing	335
8.2	Experimental Results of Members Subjected to Pure Torsion	337
8.3	Cracking Torque for Members Under Pure Torsion	340
8.3.1	Solid Members	340
8.3.2	Hollow Members	346
8.4	Calculation of Torsional Capacities for Members of Rectangular Sections Subjected to Pure Torsion	350
8.4.1	Space Truss Analogy	350
8.4.2	Skew Bending Theory	354
8.4.3	Calculation Method in GB 50010	355
8.5	Calculation of Torsional Capacities for Members of I-, T-, and Box Sections Subjected to Pure Torsion	357
8.5.1	Method Based on the Space Truss Analogy	357
8.5.2	Method in GB 50010	357
8.6	Applications of Calculation Formulae for Torsional Capacities of Members Subjected to Pure Torsion	359
8.6.1	Cross-Sectional Design	359
8.6.2	Evaluation of Torsional Capacities of Existing Members	363
8.7	Experimental Results on Members Under Combined Torsion, Shear, and Flexure.	365
8.8	Bearing Capacities of Members Under Combined Torsion, Shear, and Flexure.	366
8.8.1	Bearing Capacities of Members Under Combined Torsion and Flexure	366
8.8.2	Bearing Capacities of Members Under Combined Torsion and Shear	368
8.8.3	Capacity Calculation of Members Under Combined Torsion, Shear, and Flexure	371

8.9	Applications of Capacity Formulae for Members Under Combined Torsion, Shear, and Moment	373
8.9.1	Cross-Sectional Design	373
8.9.2	Capacity Evaluation of Members Under Combined Torsion, Shear, and Flexure	376
8.10	Capacities of Members Under Combined Torsion, Shear, Flexure, and Axial Force	378
8.10.1	Capacities of Members with Rectangular Sections Under Combined Torsion, Shear, Flexure, and Axial Compression	378
8.10.2	Capacities of Members with Rectangular Sections Under Combined Torsion, Shear, Flexure, and Axial Tension	379
9	Punching Shear and Bearing	385
9.1	Punching Shear	385
9.1.1	Punching Shear Failure in Slabs	385
9.1.2	Measures to Increase Punching Shear Capacities of Members	389
9.1.3	Calculation of Punching Shear Capacities	392
9.1.4	Eccentric Punching Shear Problems	399
9.2	Bearing	403
9.2.1	Mechanism of Bearing Failure	404
9.2.2	Calculation of Bearing Capacities	405
10	Prestressed Concrete Structures	415
10.1	Basic Concepts and Materials	415
10.1.1	Characteristics of Prestressed Concrete Structures	415
10.1.2	Definition of Degree of Prestress	418
10.1.3	Grades and Classification of Prestressed Concrete Structures	419
10.1.4	Types of Prestressed Concrete Structures	420
10.1.5	Materials	422
10.2	Methods of Prestressing and Anchorage	424
10.2.1	Methods of Prestressing	424
10.2.2	Anchorage and Clamps	427
10.2.3	Profiles of Posttensioned Tendons	429
10.2.4	Control Stress σ_{con} at Jacking	431
10.3	Prestress Losses	432
10.3.1	Prestress Loss σ_{11} Due to Anchorage Deformation	433
10.3.2	Prestress Loss σ_{12} Due to Friction Between Tendon and Duct	434

10.3.3	Prestress Loss σ_{13} Due to Temperature Difference.	439
10.3.4	Prestress Loss σ_{14} Due to Tendon Stress Relaxation.	440
10.3.5	Prestress Loss σ_{15} Due to Creep and Shrinkage of Concrete.	442
10.3.6	Prestress Loss σ_{16} Due to Local Deformation Caused by Pressure	445
10.3.7	Combination of Prestress Losses	446
10.4	Properties of the Zone for Prestress Transfer.	446
10.4.1	Transfer Length and Anchorage Length of Pretensioned Tendons.	446
10.4.2	Anchorage Zone of Posttensioned Members	448
10.5	Analysis of Members Subjected to Axial Tension	448
10.5.1	Characteristics of Prestressed Members Subjected to Axial Tension	448
10.5.2	Pretensioned Members Subjected to Axial Tension	449
10.5.3	Posttensioned Members Subjected to Axial Tension	451
10.5.4	Comparison Between Pretensioned and Posttensioned Members and Discussion	453
10.6	Design of Members Subjected to Axial Tension	454
10.6.1	Design for the Loading Stage	454
10.6.2	Design for Construction Stage.	455
10.6.3	Steps for the Design	456
10.7	Analysis of Prestressed Flexural Members	461
10.7.1	Characteristics of Prestressed Flexural Members	461
10.7.2	Pretensioned Flexural Members	461
10.7.3	Posttensioned Flexural Members	465
10.8	Design of Prestressed Flexural Members	467
10.8.1	Design of Normal Sections	467
10.8.2	Design of Inclined Sections	474
10.8.3	Serviceability Checks	476
10.8.4	Check on the Construction Stage.	477
10.8.5	Steps for Design of Prestressed Flexural Members	478
10.9	Statically Indeterminate Prestressed Structures.	485
10.10	Detailing for Prestressed Concrete Members	486
10.10.1	Detailing for Pretensioned Members.	486
10.10.2	Detailing for Posttensioned Members	489

11	Serviceability of Concrete Structures	497
11.1	Crack Width Control	497
11.1.1	Classification and Causes of Cracks in Concrete Structures	497
11.1.2	Purpose and Requirements of Crack Control	501
11.2	Calculation of Cracking Resistance in Prestressed Concrete Members	505
11.2.1	Cracking Resistance of Normal Sections	505
11.2.2	Cracking Resistance of Inclined Sections	508
11.3	Calculation of Crack Width in Normal Sections	512
11.3.1	Theories on Crack Width Calculation	512
11.3.2	Maximum Crack Width	520
11.4	Deflection Control	531
11.4.1	Purpose and Requirement of Deflection Control	531
11.4.2	Deformation Checking for Reinforced Concrete Flexural Members	533
11.4.3	Deformation Checking for Prestressed Concrete Flexural Members	546
12	Durability of Concrete Structures	553
12.1	Influencing Factors	553
12.2	Deterioration of Concrete	554
12.2.1	Carbonization	555
12.2.2	Frost Action	560
12.2.3	Alkali–Aggregate Reaction	562
12.2.4	Chemical Attacks	564
12.3	Corrosion of Steel Embedded in Concrete	567
12.3.1	Mechanism	567
12.3.2	Corrosion Effect	569
12.3.3	Mechanical Properties of Corroded Steel Bars	570
12.3.4	Mechanical Properties of Corroded Prestressed Tendons	574
12.3.5	Bond Between Concrete and Corroded Steel Bars	576
12.4	Flexural Behavior of Corroded RC Members	581
12.4.1	Experimental Study	581
12.4.2	Flexural Bearing Capacities of Corroded RC Beams	583
12.4.3	Flexural Stiffness of Corroded RC Beams	584

12.5	Flexural Behavior of Corroded Prestressed Concrete Members.	585
12.5.1	Experimental Study	585
12.5.2	Flexural Bearing Capacities of Corroded Prestressed Concrete Beams	586
12.5.3	Flexural Stiffness of Corroded Prestressed Concrete Beams	590
12.6	Durability Design and Assessment of Concrete Structures.	593
12.6.1	Framework of Life Cycle Design Theory for Concrete Structures.	593
12.6.2	Durability Design	595
12.6.3	Durability Assessment for Existing Concrete Structures	596
