

Contents

1	The Thermoelectric and Related Effects	1
1.1	Introduction	1
1.2	Relations Between the Thermoelectric Coefficients	3
1.3	Effects in a Magnetic Field	5
	References	7
2	Theory of Thermoelectric Refrigeration and Generation	9
2.1	The Transport Effects	9
2.2	Thermoelectric Refrigerators and Heat Pumps	10
2.3	Thermoelectric Generators	15
2.4	Multi-stage Devices	17
2.5	Application of the Thermomagnetic Effects	19
	References	24
3	Thermoelectric Properties of Metals and Semiconductors	25
3.1	Transport by Electrons	25
3.2	Metals and Semiconductors	33
3.3	Bipolar Effects	37
3.4	Phonon Conduction	38
3.5	Phonon Drag	42
	References	44
4	Optimisation and Selection of Semiconductor Thermoelements	45
4.1	Power Factor	45
4.2	The Materials Parameter, β	46
4.3	Mobility and Effective Mass	48
4.4	The Lattice Thermal Conductivity in Pure Crystals	49
4.5	The Effect of Temperature	53
4.6	The Importance of the Energy Gap	54
4.7	Non-parabolic Bands	57

4.8	Thermomagnetic Materials.	59
4.9	Superconductors as Passive Thermoelements	64
	References	65
5	Minimising the Thermal Conductivity	67
5.1	Semiconductor Solid Solutions.	67
5.2	Phonon Scattering by Point Defects	69
5.3	Boundary Scattering	74
5.4	Scattering of Electrons and Phonons.	76
5.5	Fine Grained Material with Large Unit Cells	78
5.6	Phonon-Glass Electron-Crystal.	80
5.7	Thermoelectric Refrigeration at Very Low Temperatures.	82
	References	84
6	The Improvement of a Specific Material—Bismuth Telluride	85
6.1	Pure Bismuth Telluride	85
6.2	Band Structure of Bismuth Telluride.	88
6.3	Diffusion in Bismuth Telluride.	92
6.4	Solid Solutions Based on Bismuth Telluride	94
6.5	Practical Developments.	96
6.6	Bismuth Telluride Alloys as Generator Materials	99
6.7	Recent Advances	103
	References	106
7	Methods for the Production of Materials.	109
7.1	General Principles	109
7.2	Growth from the Melt.	110
7.3	Sintering	116
7.4	Thick and Thin Films	122
	References	123
8	Measurement Techniques	125
8.1	General Considerations	125
8.2	Electrical Conductivity	126
8.3	Seebeck Coefficient	131
8.4	Thermal Conductivity	134
8.5	Thermal Diffusivity	139
8.6	The Figure of Merit	141
8.7	Thermomagnetic Measurements	148
	References	151
9	Review of Thermoelectric Materials	153
9.1	Bismuth and Bismuth–Antimony	153
9.2	Lead Telluride and Related Compounds	163
9.3	Silicon–Germanium Alloys	168

9.4	Skutterudites and Clathrates	172
9.4.1	Skutterudites	172
9.4.2	Clathrates	175
9.5	Oxides	178
9.6	Other Thermoelectric Materials	180
9.6.1	Zinc Antimonide	180
9.6.2	Half-Heusler Compounds	181
9.6.3	Metal Silicides	183
9.6.4	Organic Thermoelectrics	189
9.6.5	Boron Carbide	190
	References	191
10	Thermoelectric Modules and Their Application	197
10.1	The Modular Concept	197
10.2	Heat Transfer Problems	201
10.3	Electrical Contact Resistance	204
10.4	Applications of the Peltier Effect	207
10.5	Transient Cooling	209
10.6	Seebeck Devices	213
	References	219
11	Transverse Devices	221
11.1	Features of Transverse Coolers and Generators	221
11.2	Synthetic Transverse Thermoelements	222
11.3	Materials for Transverse Thermoelements	226
11.4	Alternative Configurations	230
11.5	Further Developments	232
	References	232
12	Properties of Nanostructured Materials	233
12.1	Theory of Nanostructures	233
12.2	Thermal Conduction in Low-Dimensional Materials	238
12.3	Observations on Nanostructures	243
12.4	Preparation of Nanostructures	246
12.5	Recent Developments	248
	References	254
13	Thermionic Energy Conversion	257
13.1	Vacuum Thermoelements	257
13.2	Thermionic Emission in Solids	264
	References	270
