

Contents

1	Introduction—Dynamics of Relevant Variables	1
2	Generated Dynamics	7
2.1	Algebraic Structure of Causal Step by Step Dynamics	7
2.2	Deterministic Processes	8
2.3	Stochastic Processes	10
2.3.1	General Notations	10
2.3.2	Constraints by Conservation of Probability	11
2.3.3	Markov Processes	12
2.3.4	Quantum Processes	14
2.3.5	Markov: Two Values	16
2.3.6	Quantum: Two Values	17
2.3.7	Comparison Between Diffusion and Free Quantum Propagation	18
2.3.8	External and Internal Randomness and Deterministic Representations	21
2.4	Exercises	25
	References	26
3	Formal Solutions	27
3.1	Generator as Differential Operator	27
3.2	Lie-Series	31
3.3	Path Integrals	32
3.4	Chain Rule and Huygens-Born Principle	34
3.4.1	The L-Function for Second Order Derivatives	37
3.4.2	Emergence of a Quantum to Classical Correspondence	38
3.4.3	Emergence of a Quantum to Markov Behavior	40
3.5	Exercises	41
	References	42

4	Special Solutions	43
4.1	Discrete Few States Deterministic Processes	43
4.2	Discrete Nearest Neighbor Markov Processes	44
4.2.1	Random Walk	49
4.2.2	Population Dynamics	50
4.2.3	Radioactive Decay	51
4.2.4	Fluctuations in an Ideal Gas	52
4.2.5	Shot Noise	53
4.2.6	Fokker-Planck Equation in the Continuum Limit	55
4.3	The Ornstein-Uhlenbeck Process	55
4.4	Elementary Quantum Systems	57
4.4.1	Quantum Well	58
4.4.2	Harmonic Oscillator and Occupation Numbers	61
4.5	Exercises	65
	References	66
5	Observables, States, Entropy and Generating Functionals	67
5.1	Time Derivatives, Compatibility and Uncertainty	67
5.2	Reduction of Variables and the Density Operator	70
5.3	Entropy	72
5.3.1	Configuration Entropy	72
5.3.2	Quantum Entropy	75
5.4	Stationary States and Equilibrium	76
5.4.1	Stationary State in Ornstein-Uhlenbeck Processes	76
5.4.2	Quantum Master Equation	77
5.4.3	Stationarity in Markov Processes	81
5.4.4	Maximum Entropy Principle	82
5.4.5	Quantum Scattering	83
5.5	Generating Functionals All Over	85
5.5.1	Scattering Theory	85
5.5.2	Canonical Equilibrium	88
5.5.3	Field Theory and Gaussian Fluctuations	89
5.5.4	Stationary Action and Expansions	93
5.6	Modeling Strategies	96
5.7	The Renormalization Semi-Group	99
5.8	Exercises	104
	References	106
6	Symmetries and Breaking of Symmetries	107
6.1	General Definitions	108
6.2	Transformation Groups and Representations	109
6.3	Noether-, Ward- and Goldstone-Theorems	115
6.4	The Gauge Principle	121

6.5	Anderson-Higgs Mechanism	124
6.6	Exercises	126
	References	126
7	Topology	127
7.1	Kinks, Quantization and Magnetic Monopoles.	127
7.2	Sketch of Topological Vocabulary	130
7.3	Topology and the Quantum Hall Effect	133
7.3.1	Quantum Hall Effect	134
7.3.2	Winding Paths	136
7.3.3	Field Theory with Topological Term	141
7.4	Exercises	144
	References	145
8	Selected Applications	147
8.1	Tunneling in a Double Well	147
8.2	Entropy Close to Equilibrium	151
8.3	Self-organized Laser Far from Equilibrium	153
8.4	Brownian Motion in Random Matrix Theory	157
8.5	A Field Theory for Universal Fluctuations	161
8.6	Transfer Matrix as Semi-Group Dynamics	166
8.7	Quantum and Markov: Anderson Localization.	169
8.8	Exercises	176
	References	178
	Appendix A: Random Variables	179
	Appendix B: Method of Characteristics	201
	Appendix C: Many-Body Green's Functions.	205
	Index	221

Generated Dynamics of Markov and Quantum
Processes

Janßen, M.

2016, XVII, 226 p. 36 illus., 1 illus. in color., Hardcover

ISBN: 978-3-662-49694-7
