

Contents

1	Basic Concepts of Linear Optical System	1
1.1	Basic Concepts of Quantum Information.	1
1.1.1	Quantum Correlation and Quantum Entanglement	2
1.1.2	Quantum Decoherence and Quantum Measurement	8
1.2	Overview of the Basic Experimental Skills in Linear Optics	11
1.2.1	Preparation of Single Photon and Entangled Photons	11
1.2.2	Measurements in Linear Optics	17
1.3	The Nonclassical Light Field Prepared Through SPDC.	18
1.3.1	Two-Photon Wave Function in SPDC	21
1.3.2	Temporal Feature of SPDC Two-Photon State.	27
1.3.3	Spatial Feature of SPDC Two-Photon State	33
1.3.4	Impact of SPDC Two-Photon Temporal and Spatial Distribution on Polarization Entanglement	39
	References	41
2	Measurement-Induced Entanglement Recovery	51
2.1	Introduction	51
2.2	Theory Description	53
2.2.1	Experimental Realization of Dephasing Environment	53
2.2.2	Recover Entanglement Through Measurement in Dephasing Environment	54
2.3	Experimental Results	59
2.3.1	Description of the Experimental Setup	59
2.3.2	Entanglement Dynamics	59
2.3.3	Recovery of Nonlocality.	60
2.4	Discussion	61
2.5	Summary	61
	References	61

3	Experimental Verification of Nonlocality of Partial-Collapse Measurement and Recovery	65
3.1	Introduction	65
3.2	Theory Description	67
3.2.1	Experimental Realization on Partial-Collapse Measurement and Recovery in Experiment	67
3.2.2	Partial-Collapse Measurement and Nonlocality Theory Description in Recovery	68
3.3	Experiment Results	69
3.3.1	Description of the Experimental Setup	69
3.3.2	Partial-Collapse Measurement and Its Local Recovery	69
3.3.3	Partial-Collapse Measurement and Its Nonlocal Recovery	74
3.3.4	Nonlocality Recovery of Quantum State	74
3.4	Summary	75
	References	75
4	Ultrasensitive Phase Estimation Based on Weak Measurement	77
4.1	Introduction	77
4.2	Quantum Weak Measurement	79
4.2.1	Two-State Vector Formalism	79
4.2.2	Weak Measurement and Weak Value	80
4.3	Realizing Precision Phase Estimate Using Weak Measurement	84
4.3.1	Analysis of Precise Phase Estimation Based on Weak Measurement in Frequency Domain	85
4.3.2	Introduce the Imaginary Part of Weak Value Through Weak Coupling	89
4.4	Experimental Demonstration	91
4.5	Discussion and Summary	94
	References	95
5	Quantitative Verification of the Kibble–Zurek Mechanism in Quantum Nonequilibrium Dynamics	99
5.1	Introduction	99
5.2	Theoretical Background	101
5.2.1	Kibble–Zurek Mechanism	101
5.2.2	Landau–Zener Model	104
5.2.3	Description of Landau–Zener Model Through Kibble–Zurek Mechanism	109
5.3	Utilizing the Linear Optical System to Study KZM Quantitatively	112
5.3.1	Quantum Simulation	112
5.3.2	Realizing Landau–Zener Model in Linear Optics	114
5.3.3	Study KZM Quantitatively in Linear Optics	120
5.4	Discussion and Summary	122
	References	122

Applied Research of Quantum Information Based on
Linear Optics

Xu, X.-Y.

2016, XXIII, 126 p. 48 illus., 17 illus. in color., Hardcover

ISBN: 978-3-662-49802-6
