

Contents

1	Black Hole Accretion Discs	1
	Jean-Pierre Lasota	
1.1	Introduction	1
1.2	Disc-Driving Mechanism; Viscosity	3
1.2.1	The α -Prescription	4
1.3	Geometrically Thin Keplerian Discs	5
1.3.1	Disc Vertical Structure	5
1.3.2	Disc Radial Structure	8
1.3.3	Self-gravity	11
1.3.4	Stationary Discs	12
1.3.5	Radiative Structure	15
1.3.6	Shakura–Sunyaev Solution	18
1.4	Disc Instabilities	20
1.4.1	The Thermal Instability	20
1.4.2	Thermal Equilibria: The S-Curve	21
1.4.3	Irradiation and Black Hole X-Ray Transients	24
1.4.4	Maximum Accretion Rate and Decay Timescale	30
1.4.5	Comparison with Observations	31
1.5	Black Holes and Advection of Energy	33
1.5.1	Advection-Dominated-Accretion-Flow Toy Models	34
1.6	Accretion Discs in Kerr Spacetime	40
1.6.1	Kerr Black Holes	40
1.6.2	Privileged Observers	44
1.6.3	The Ergosphere	45
1.6.4	Equatorial Plane	45
1.7	Accretion Flows in the Kerr Spacetime	50
1.7.1	Kinematic Relations	50
1.7.2	Description of Accreting Matter	51
1.8	Slim-Disc Equations in Kerr Geometry	52
1.8.1	Mass Conservation Equation	52
1.8.2	Equation of Angular Momentum Conservation	53

1.8.3	Equation of Momentum Conservation.	53
1.8.4	Equation of Energy Conservation.	54
1.8.5	Equation of Vertical Balance of Forces.	55
1.9	The Sonic Point and the Boundary Conditions	55
1.9.1	The “No-Torque Condition”	55
	References	59
2	Transient Black Hole Binaries	61
	Tomaso M. Belloni and Sara E. Motta	
2.1	Introduction	61
2.2	X-ray Emission	63
2.2.1	Energy Spectra	67
2.2.2	Fast Time Variability	69
2.2.3	Long-Term Time Evolution.	75
2.3	Radio/IR Emission.	78
2.3.1	Radio Jets.	78
2.3.2	Accretion–Ejection.	80
2.4	Winds and Outflows	82
2.4.1	Accretion Disc Winds and Atmospheres	83
2.4.2	Winds Launching Mechanism	84
2.5	The Full Accretion–Ejection Picture.	85
2.6	Conclusions	88
	References	89
3	Black Hole Spin: Theory and Observation	99
	M. Middleton	
3.1	Preface.	99
3.2	Useful Theory	100
3.2.1	Frame-Dragging.	103
3.3	Observational Tests of Spin I—the Energy Spectral Domain	108
3.3.1	Modelling the Continuum (Disc) Spectrum	108
3.3.2	Modelling the Reflection Spectrum	115
3.3.3	Results: BHBs.	125
3.3.4	Results: AGN	131
3.3.5	Implications: Powering of Ballistic Jets.	135
3.3.6	Implications: Retrograde Spins?	138
3.4	Observational Tests of Spin II—The Time Domain and Relativistic Precession Model	138
3.5	Observational Tests of Spin III—The Energy–Time Domain	141
3.6	Concluding Remarks and Future Approaches	143
	References	144
4	Winds from Black Hole Accretion Flows: Formation and Their Interaction with ISM	153
	Feng Yuan	
4.1	Introduction	153

4.2	Formation of Wind from a Hot Accretion Flow	154
4.2.1	Brief History of Study of Wind from Hot Accretion Flows	155
4.2.2	Main Properties of Winds	157
4.2.3	Acceleration Mechanism of Wind and Disk Jet	162
4.2.4	Why Do Winds Exist?	163
4.3	Interaction of Winds with Interstellar Medium: The Formation of the Fermi Bubbles	164
4.4	Summary	166
	References	167
5	A Brief Review of Relativistic Gravitational Collapse	169
	Daniele Malafarina	
5.1	Introduction	169
5.2	Einstein's Equations for the Collapsing Interior	171
5.2.1	Co-moving Coordinates	171
5.2.2	Misner–Sharp Mass	173
5.2.3	Einstein's Equations	174
5.3	Matching with an Exterior Metric	176
5.4	Regularity, Scaling, and Energy Conditions	178
5.4.1	Regularity and Scaling	178
5.4.2	Energy Conditions	182
5.4.3	Shell Crossing Singularities	183
5.5	Trapped Surfaces and Singularities	183
5.6	Homogeneous Solutions	186
5.6.1	Apparent Horizon and Singularity	188
5.7	Inhomogeneous Dust and Collapse with Pressures	188
5.8	Collapse in Astrophysics	193
5.9	Concluding Remarks	194
	References	196
	Appendix A: General Relativity in a Nutshell	199

Astrophysics of Black Holes

From Fundamental Aspects to Latest Developments

Bambi, C. (Ed.)

2016, XI, 207 p. 35 illus., Hardcover

ISBN: 978-3-662-52857-0
