

Preface

This volume contains four fully revised selected regular papers, covering a wide range of different and very hot topics in the field of data and knowledge management systems. These include optimization and cluster validation processes for entity matching, business intelligence systems, and data profiling in the semantic Web.

We would like to sincerely thank the editorial board and the external reviewers for thoroughly refereeing the submitted papers and ensuring the high quality of this volume.

Special thanks go to Gabriela Wagner for her high availability and her valuable work in the realization of this TLDKS volume.
