

Contents

1	Introduction	1
 Part I Noncooperative Games		
2	Discrete Static Games	7
2.1	Examples of Two-Person Finite Games	7
2.2	General Description of Two-Person Finite Games	14
2.3	N -person Finite Games	19
3	Continuous Static Games	21
3.1	Examples of Two-Person Continuous Games	22
3.2	Examples of N -Person Continuous Games	41
4	Relation to Other Mathematical Problems	49
4.1	Nonlinear Optimization	49
4.2	Fixed Point Problems	50
5	Existence of Equilibria	53
5.1	General Existence Conditions	53
5.2	Bimatrix and Matrix Games	57
5.3	Mixed Extensions of N -person Finite Games	61
5.4	Multiproduct Oligopolies	62
6	Computation of Equilibria	65
6.1	Application of the Kuhn–Tucker Conditions	65
6.2	Reduction to an Optimization Problem	68
6.3	Solution of Bimatrix Games	70
6.4	Solution of Matrix Games	74
6.5	Solution of Oligopolies	77

7	Special Matrix Games	81
7.1	Matrix with Identical Elements	81
7.2	The Case of Diagonal Matrix	81
7.3	Symmetric Matrix Games	83
7.4	Relation Between Matrix Games and Linear Programming	84
7.5	Method of Fictitious Play	89
7.6	Method of von Neumann	92
8	Uniqueness of Equilibria	97
9	Repeated and Dynamic Games	105
9.1	Leader-Follower Games	105
9.2	Dynamic Games with Simultaneous Moves	110
9.3	Dynamic Games with Sequential Moves	115
9.4	Extensive Forms of Dynamic Games	123
9.5	Subgames and Subgame-Perfect Nash Equilibria	125
10	Games Under Uncertainty	127
10.1	Static Bayesian Games	131
10.2	Dynamic Bayesian Games	134
 Part II Cooperative Games		
11	Solutions Based on Characteristic Functions	143
11.1	The Core	150
11.2	Stable Sets	155
11.3	The Nucleolus	156
11.4	The Shapley Values	160
11.5	The Kernel and the Bargaining Set	164
12	Conflict Resolution	169
12.1	The Nash Bargaining Solution	171
12.2	Alternative Solution Concepts	175
12.3	N -person Conflicts	182
13	Multiobjective Optimization	185
13.1	Lexicographic Method	188
13.2	The ε -constraint Method	190
13.3	The Weighting Method	191
13.4	Distance-Based Methods	194
13.5	Direction-Based Methods	196

14 Social Choice	199
14.1 Methods with Symmetric Players	199
14.2 Methods with Powers of Players	203
15 Case Studies and Applications	209
15.1 A Salesman's Dilemma	209
15.2 Oligopoly in Water Management	213
15.3 A Forestry Management Problem	214
15.4 International Fishing	216
15.5 A Water Distribution Problem	219
15.6 Control in Oligopolies	223
15.7 Effect of Information Lag in Oligopoly	226
Appendix A: Vector and Matrix Norms	231
Appendix B: Convexity, Concavity	235
Appendix C: Optimum Conditions	239
Appendix D: Fixed Point Theorems	243
Appendix E: Monotonic Mappings	247
Appendix F: Duality in Linear Programming	251
Appendix G: Multiobjective Optimization	253
Appendix H: Stability and Controllability	257
References	261
Index	265

Game Theory and Its Applications

Matsumoto, A.; Szidarovszky, F.

2016, XIV, 268 p. 63 illus., Hardcover

ISBN: 978-4-431-54785-3
