1	Introduction.	1
1.1	Neutrino Oscillation	2
1.1.1	Three Flavours of Neutrinos	2
1.1.2	Discovery of Neutrino Oscillation.	2
1.1.3	Theory of Neutrino Oscillation.	3
1.2	Current Knowledge of Neutrino Physics	7
1.2.1	Oscillation Parameters.	7
1.2.2	Unanswered Questions	9
1.3	Motivation of $\nu_\mu \rightarrow \nu_e$ Measurement	14
1.4	Outline of This Thesis	15
	References	15
2	Overview of the T2K Experiment	19
2.1	J-PARC Neutrino Beam Line.	20
2.1.1	Controlling the Primary Proton Beam	22
2.1.2	Off-Axis Method	24
2.2	Monitoring of the Secondary Beam	25
2.2.1	Muon Monitor	25
2.2.2	INGRID	25
2.3	ND280 and Super-Kamiokande	27
2.3.1	Neutrino Detection at ND280 and SK.	27
2.3.2	ND280	28
2.3.3	Far Detector (Super-Kamiokande).	31
2.4	Summary of the Beam Data Taking	32
	References	33
3	The Fine-Grained Detector	35
3.1	FGD and Neutrino Interaction	35
3.2	Fine-Grained Detector.	36
3.2.1	Overview of the Design	36
3.2.2	Readout Electronics	38

3.2.3	MPPC (Multi-Pixel Photon Counter)	40
3.2.4	Detector Calibration	42
3.3	Reconstruction of Particle Trajectories	45
	References	50
4	Pion Interaction Measurement at TRIUMF M11 Beamline.	51
4.1	Motivation of the Measurement	51
4.2	Overview of the Experimental Setup.	53
4.3	Detector Configuration	55
4.3.1	Fiber Tracker.	56
4.3.2	NaI Detector and Harpsichord Detector	58
4.3.3	Summary of Data-Taking	59
	References	59
5	Extraction of Pion Absorption and Charge Exchange Cross Section.	61
5.1	Event Reconstruction	61
5.2	Event Selection	63
5.3	Simulation of the Detector and Pion Interaction	67
5.3.1	Physics Model	67
5.3.2	Detector and Beam.	70
5.4	Extraction of the Cross Section	71
	References	74
6	Improvement of Pion Interaction Model	77
6.1	Cascade Model	77
6.2	Fit to the Pion Cross Section Data Sets.	79
	References	87
7	Monte Carlo Simulation for the Oscillation Analysis	89
7.1	Overview of the Oscillation Analysis	89
7.2	Flux Prediction with Systematic Uncertainties	91
7.3	Neutrino Interaction Model and Constraints	92
7.3.1	Neutrino Interaction Model	93
7.3.2	Cross Section Parameters	97
	References	99
8	Near Detector Measurement	101
8.1	Event Reconstruction	101
8.1.1	TPC Tracks	101
8.1.2	FGD Tracks.	103
8.1.3	FGD Delayed Hits	103
8.2	Event Selection	104
8.3	Systematic Uncertainties	108
8.4	Constraining the Neutrino Flux and Cross Section	110
	Reference	112

9	Far Detector Measurement	113
9.1	ν_e Event Selection	113
9.2	Systematic Uncertainties	116
	References	119
10	Oscillation Analysis and Results	121
10.1	Overview	121
10.2	Fit Procedure	123
10.2.1	Definition of the Likelihood	123
10.2.2	Likelihood Marginalization	124
10.3	Prediction of SK Observables	125
10.4	Systematic Uncertainties	126
10.4.1	Description and Implementation of the Systematic Errors	126
10.4.2	Effect of Systematic Uncertainties	131
10.5	Sensitivity	136
10.6	Fit Results for Run1–4 Data	141
10.6.1	Fit to Run1–4 Data	141
10.6.2	Fit with Different $\sin^2 \theta_{23}$ Values	144
10.7	Results Using the Reactor Measurements	145
10.7.1	Constraint Term and Marginalization	145
10.7.2	Fit Results with θ_{23} and Δm_{32}^2 Varied	146
10.7.3	Fit Results with Reactor Measurements	148
10.8	Summary	153
	References	153
11	Conclusion	155
	Reference	157
Appendix A: Simulation and the Systematic Errors in the Pion Interaction Measurement		159
Appendix B: Neutrino Flux and Cross Section Uncertainties		173
Appendix C: ND280 Data Fit		183
Appendix D: SK Efficiency Error		187
Appendix E: Comparison with 2012 ν_e Appearance Analysis		191
Curriculum Vitae		199
