

Contents

1	Introduction	1
1.1	Crystal and Amorphous Structures	1
1.2	Benefits of Topological Analysis	4
	References	7
2	Metallic Glasses	9
2.1	Introduction	9
2.2	Structure Models	10
2.3	Experimental Difficulty in Determining Structures	12
	References	14
3	Overview of Cubical Homology	15
3.1	Introduction	15
3.2	The Fundamental Idea of Homology	17
3.3	Cubical Sets and Chains	18
3.4	Boundary and Cubical Chain Complexes	24
3.5	Cubical Homology and Betti Numbers	29
3.6	Remarks and Guide to the Literature	36
	References	36
4	Application of Computational Homology to Metallic Glass Structures	37
4.1	Introduction	37
4.2	Calculation Procedures	38
4.2.1	Preparation of Cubical Dataset from Atomic Configurations	38
4.2.2	Effect of Atomic Size	41
4.2.3	Effect of Voxel Size	42
4.3	Homological Analysis for Metallic Glass Structures	42
4.4	Homological Analysis for Crystal Structures	45
4.5	Structural Features of Metallic Glasses Viewed by Homology	46
	References	46

5 Conclusion. 47
