Part I Multiphase Flows

1	Nonconvergence of the Capillary Stress Functional for Solutions of the Convective Cahn-Hilliard Equation	3
	Helmut Abels and Stefan Schaubeck	
1.1	Introduction	3
1.2	Notation and Basic Assumptions	6
1.3	Nonconvergence Result	8
	References.	23
2	On the Interface Formation Model for Dynamic Triple Lines	25
	Dieter Bothe and Jan Prüss	
2.1	Introduction	25
2.2	Integral Balances	28
2.3	Transport Theorems	31
2.4	Local Balances	33
2.5	Entropy Production and Closure Relations	35
2.6	Isothermal Case with Vanishing Triple Line Mass	39
2.7	Thermodynamical Consistency and Equilibria	41
	References.	46
3	Global Solvability of the Problem on Two-Phase Capillary Fluid Motion in the Oberbeck–Boussinesq Approximation	49
	Irina Vlad. Denisova	
3.1	Statement of the Problem and the Main Result.	49
3.2	An Energy Estimate of the Solution	57
3.3	Linearized Problems	59
3.4	Global Solvability of the Problem (3.1), (3.4), (3.3).	62
3.4.1	Conclusions.	69
	References.	70

4	Stability of Steady Flow Past a Rotating Body	71
	Giovanni Paolo Galdi and Jiří Neustupa	
4.1	Motivation and Introduction	71
4.2	Auxiliary Results	79
4.3	The Main Theorem on Stability	84
	References.	93
5	Asymptotic Structure of Steady Stokes Flow Around a Rotating Obstacle in Two Dimensions	95
	Toshiaki Hishida	
5.1	Introduction	95
5.2	Results	98
5.3	Fundamental Solution	104
5.4	Proof of Theorem 5.2.1	127
5.5	Proof of Theorem 5.2.2	132
	References.	136
6	Toward Understanding Global Flow Structure	139
	Makoto Iima, Takayuki Yamaguchi, Takeshi Watanabe, Akane Kawaharada, Yuji Tasaka and Erika Shoji	
6.1	Introduction	140
6.2	Phenomena	142
	6.2.1 Localized Convection Patterns in Binary Fluid Convection	142
	6.2.2 Localized Convection Patterns in Bioconvection	144
	6.2.3 Surface Switching	148
6.3	Analysis Methods	150
	6.3.1 Orbit Analysis Applying Covariant Lyapunov Analysis.	150
	6.3.2 Generating Cellular Automata Rule from Measurement Data Alone	152
6.4	Concluding Remarks.	154
	References.	155
7	Mathematical and Numerical Analysis of the Rayleigh-Plesset and the Keller Equations	159
	Masashi Ohnawa and Yukihito Suzuki	
7.1	Introduction	159
7.2	Mathematical Models for Motion of a Spherical Bubble	161
	7.2.1 The Rayleigh-Plesset Equation	161
	7.2.2 The Rayleigh-Plesset-Keller Equation	163
7.3	Mathematical Analysis	165

7.4	A Hamiltonian Formulation of the Rayleigh-Plesset-Keller Equation	169
7.4.1	A Hamiltonian Formulation of the Rayleigh-Plesset Equation	169
7.4.2	A Hamiltonian Formulation of the Keller-Herring Equation	170
7.5	Discrete Gradient Schemes for the Rayleigh-Plesset and Keller Equations	172
7.6	Numerical Results.	174
7.6.1	The Inviscid Rayleigh-Plesset Equation.	175
7.6.2	The Keller Equation	177
7.7	Concluding Remarks.	179
	References.	180
8	On the Amplitude Equation of Approximate Surface Waves on the Plasma-Vacuum Interface	181
	Paolo Secchi	
8.1	Introduction	181
8.2	The Plasma-Vacuum Interface Problem	183
8.3	The Asymptotic Expansion.	185
8.4	The First Order Equations	187
8.5	The Second Order Equations	190
8.5.1	The Second Order Equations in the Plasma Region	190
8.5.2	The Second Order Equations in Vacuum.	192
8.5.3	The Second Order Jump Conditions	193
8.5.4	The Kernel	195
8.6	Noncanonical Variables and Well-Posedness	197
8.6.1	Well-Posedness of the Amplitude Equation.	198
8.6.2	Regularity of the First Order Terms $U^{(1)}, V^{(1)}$	200
	References.	201
9	On the \mathcal{R}-Bounded Solution Operator and the Maximal L_p-L_q Regularity of the Stokes Equations With Free Boundary Condition	203
	Yoshihiro Shibata	
9.1	Introduction	204
9.2	Reduced Stokes Problem	213
9.2.1	Equivalence Between Stokes and Reduced Stokes Equations	213
9.2.2	On the \mathcal{R} Bounded Solution Operators for the Reduced Stokes Problem	216
9.2.3	Time Dependent Reduced Stokes Equations	217

9.3	Reduced Stokes Equations in \mathbb{R}^N and \mathbb{R}_+^N	219
9.3.1	Reduced Stokes Equations in \mathbb{R}^N	219
9.3.2	Reduced Stokes Equations in \mathbb{R}_+^N with Free Boundary Condition	223
9.3.3	Reduced Stokes Equations in \mathbb{R}_+^N with Non-slip Boundary Condition	233
9.4	On the \mathcal{R} Bounded Solution Operators in a Bent Half-Space	241
9.4.1	Unit Outer Normal and Laplace-Beltrami Operator in a Bent-Half Space	241
9.4.2	Reduced Stokes Equations with Free Boundary Condition in a Bent-Half Space	242
9.4.3	Reduced Stokes Equations with Non-slip Boundary Condition in a Bent-Half Space	249
9.5	Proof of Theorem 9.2.1	250
9.5.1	Some Preparation for the Proof of Theorem 9.2.1	250
9.5.2	Local Solutions	254
9.5.3	Construction of a Parametrix	256
9.5.4	Representation of the Remainder Terms $\mathbf{V}^i(\lambda)(\mathbf{f}, f, \mathbf{f}_b)$	259
9.5.5	Proof of Theorem 9.2.1	268
9.6	Proof of Theorem 9.2.2	270
9.6.1	Existence Part	270
9.6.2	The Weak Laplace Problem with Dirichlet Condition	274
9.6.3	Uniqueness Part	279
9.7	Proofs of Theorems 9.1.4 and 9.1.5	281
	References	285
10	On the Solvability of Free Boundary Problem for Viscous Compressible Fluids in an Infinite Time Interval	287
	Vsevolod Alekseevich Solonnikov	
10.1	Introduction	287
10.2	Linear Problem	291
10.3	Nonlinear Problem	307
	References	314
11	Classical Solvability of the Two-Phase Radial Viscous Fingering Problem in a Hele-Shaw Cell	317
	Atusi Tani and Hisasi Tani	
11.1	Introduction	317
11.2	Formulation of the Problem	318
11.3	Reformulation of the Problem	325
11.4	Linear Problem	327

11.5	Nonlinear Problem: Proof of Theorem 11.2.2	344
11.6	Passing to the Limit $\varepsilon \rightarrow 0$: Proof of Theorem 11.2.1	347
	References	348
12	Investigation of Bubble Clouds in a Cavitating Jet	349
	Katsuhiro Yamamoto	
12.1	Introduction	349
12.2	Experimental Observations	350
12.2.1	Experimental Apparatus	350
12.2.2	Instantaneous Photograph of Cavitating Jet and Visualization of Flow Around the Jet	352
12.2.3	Observation of Unsteady Behavior of Bubble Cloud Using Shadowgraph Technique and Schlieren Method with High-Speed Video Camera	352
12.2.4	Incidence Frequencies of Pressure Pulses Generated by Cavitating Jet	356
12.2.5	Erosion Test of Aluminum Specimen Using Cavitating Jet	357
12.3	Numerical Analysis	359
12.3.1	Continuum Model of Homogeneous Two-Phase Flow of Cavitating Jet	359
12.3.2	Computational Results of Cavitating Jet	361
12.3.3	Spherical Cloud Model of Cavitation Bubbles	362
12.3.4	Using Parameters for Flow Simulation of Cloud Cavitation	365
12.3.5	Results and Discussion on Pressure Pulse in Cavitation Cloud	366
12.3.6	Influence of Cloud Size and Downstream Pressure on the Impulsive Pressure	371
12.3.7	Concluding Remarks and Further Outlook	371
	References	372
