

Contents

1	Introduction	1
2	Systems of One or More Particles	5
2.1	One-Body System: A Particle in a Potential Field	5
2.2	Two-Body System with Mutual Interaction	7
2.2.1	Two Distinct Particles	8
2.2.2	Two Identical Particles: Symmetry of Wave Function	9
2.2.3	Inclusion of Spin Degrees of Freedom	10
2.2.4	Introduction of Isospin Degrees of Freedom for Nucleons	11
2.3	System of Several Particles	12
2.3.1	Independent Particle Model: Mean-Field Description	13
2.3.2	Many-Body Description	15
	References	16
3	Three-Body System	17
3.1	Jacobi Coordinates	18
3.2	Hyperspherical Harmonics	20
3.3	Schrödinger Equation for Relative Motion	24
3.4	Calculation of Potential Matrix Element	25
3.4.1	Expansion of Potential in Hyperspherical Multipoles	26
3.4.2	Calculation of Potential Multipole	27
3.5	Symmetrization of HH Basis	28
3.6	Calculation of GSC for Central Potentials	30
	References	32
4	General Many-Body Systems	33
4.1	Jacobi Coordinates and Hyperspherical Variables	34
4.2	Generalized Hyperspherical Harmonics	36

4.3	Symmetrization of Wave Function	39
4.3.1	Kinematic Rotation Vector (KRV)	39
4.3.2	Symmetrization of Wave Function	42
4.4	Schrödinger Equation: Coupled Differential Equations	43
4.5	Approximation by Truncation of Basis	44
4.5.1	Restriction of Symmetry Components	45
4.5.2	L_m Approximation	45
4.5.3	Optimal Subset	46
4.5.4	Potential Harmonics	46
4.6	Truncation of Basis: Application to Particles and Nuclei	47
4.6.1	Baryons as Three-Quark Systems	48
4.6.2	Nuclear Few-Body Systems	49
	References	52
5	The Trinucleon System.	55
5.1	Symmetrization of Spin–Isospin Wave Function.	56
5.1.1	States Having Total Isospin $t = \frac{1}{2}$ and Spin $s = \frac{1}{2}$	57
5.1.2	States Having Total Isospin $t = \frac{3}{2}$ and Spin $s = \frac{1}{2}$	60
5.1.3	States Having Total Isospin $t = \frac{1}{2}$ and Spin $s = \frac{3}{2}$	60
5.1.4	States Having Total Isospin $t = \frac{3}{2}$ and Spin $s = \frac{3}{2}$	61
5.2	Symmetrization of Total Wave Function	61
5.2.1	General Expression for Fully Antisymmetric Wave Function.	62
5.2.2	Construction of HH for Different Partitions	63
5.3	Optimal Subset for the Trinucleon	64
5.4	Calculation of Potential Matrix Element: GSC	68
5.4.1	Coupling Among S and S' States Through Central Interactions	70
5.4.2	Coupling Between S and D State Through Tensor Interaction	71
5.4.3	Coupling Between S' and D States Through Tensor Interaction	72
5.4.4	Coupling Between Two D States Through Central Forces.	73
5.4.5	Coupling Between Two D States Through Tensor Interaction	75
5.4.6	Numerical Computation of GSCs	76
5.5	Results of Numerical Calculations for ^3H and ^3He	77
5.6	Addition of Three-Nucleon Forces	79
	References	82

6	Application to Coulomb Systems	83
6.1	Two-Electron Atoms	84
6.1.1	Exact Non-adiabatic Treatment of Two-Electron Atoms	85
6.1.2	Convergence of HH Expansion: Extrapolation and Accuracy	88
6.2	General Three-Body Coulomb Bound Systems	90
6.2.1	Adiabatic Approximation in Coulomb Systems	91
	References	93
7	Potential Harmonics	95
7.1	Potential Harmonics	96
7.2	Potential Multipoles	98
7.3	Overlap of PHs of Different Pairs	99
7.4	Potential Basis as Optimal Subset	100
7.4.1	Symmetrical PH Basis	100
7.5	Potential Matrix in Unsymmetrized PH Basis	101
	References	104
8	Application to Bose–Einstein Condensates	105
8.1	General Properties of BEC	107
8.2	GP Equation	109
8.2.1	Simplifying Assumptions and Their Limitations	110
8.2.2	Rigorous Proof of Existence of BEC and Derivation of the GP Equation	110
8.3	Many-Body Approach	113
8.4	Need for a Short-Range Correlation Function	116
8.5	Results for Repulsive and Attractive Condensates	119
	References	123
9	Integro-Differential Equation	125
9.1	Derivation of IDE	126
9.2	Applications of IDE	133
9.2.1	Nuclear Systems	133
9.2.2	Bose–Einstein Condensates	136
	References	139
10	Computational Techniques	141
10.1	Solution of a Single Differential Equation	142
10.2	Solution of Coupled Differential Equations	144
10.2.1	Exact Solution of the CDE	145
10.2.2	Introduction of Hypercentral Average	149
10.2.3	Hyperspherical Adiabatic Approximation	150

10.3 Computation of Matrix Element	155
References	156
