

Contents

- 1 A Brief Review of Elementary Analytical Methods for Solving Nonlinear ODEs** 1
 - 1.1 Introduction 1
 - 1.2 Analytical Solution of First-Order Nonlinear ODEs 1
 - 1.3 High-Degree First-Order ODEs 13
 - 1.4 Analytical Solution of Nonlinear ODEs by Reducing the Order 16
 - 1.5 Transformations of Nonlinear ODEs 21
 - 1.6 Exercises 29
- 2 Analytical Approximation Methods** 33
 - 2.1 Introduction 33
 - 2.2 The Variational Iteration Method 33
 - 2.3 Application of the Variational Iteration Method 38
 - 2.4 The Adomian Decomposition Method 44
 - 2.5 Application of the Adomian Decomposition Method 48
 - 2.6 Exercises 59
- 3 Further Analytical Approximation Methods and Some Applications** 61
 - 3.1 Perturbation Method 61
 - 3.1.1 Theoretical Background 61
 - 3.1.2 Application of the Perturbation Method 63
 - 3.2 Energy Balance Method 71
 - 3.2.1 Theoretical Background 71
 - 3.2.2 Application of the Energy Balance Method 74
 - 3.3 Hamiltonian Approach 87
 - 3.3.1 Theoretical Background 87
 - 3.3.2 Application of the Hamiltonian Approach 88

3.4	Homotopy Analysis Method	92
3.4.1	Theoretical Background	92
3.4.2	Application of the Homotopy Analysis Method.	107
3.5	Exercises	118
4	Nonlinear Two-Point Boundary Value Problems	121
4.1	Introduction	121
4.2	Simple Shooting Method	123
4.3	Method of Complementary Functions.	131
4.4	Multiple Shooting Method	135
4.5	Nonlinear Stabilized March Method.	146
4.6	MATLAB PROGRAMS	155
4.7	Exercises	160
5	Numerical Treatment of Parametrized Two-Point Boundary Value Problems	165
5.1	Introduction	165
5.2	Two-Point BVPs and Operator Equations	169
5.3	Analytical and Numerical Treatment of Limit Points	172
5.3.1	Simple Solution Curves	172
5.3.2	Extension Techniques for Simple Turning Points	179
5.3.3	An Extension Technique for Double Turning Points	186
5.3.4	Determination of Solutions in the Neighborhood of a Simple Turning Point	190
5.4	Analytical and Numerical Treatment of Primary Simple Bifurcation Points	193
5.4.1	Bifurcation Points, Primary and Secondary Bifurcation Phenomena.	193
5.4.2	Analysis of Primary Simple Bifurcation Points	195
5.4.3	An Extension Technique for Primary Simple Bifurcation Points	201
5.4.4	Determination of Solutions in the Neighborhood of a Primary Simple Bifurcation Point	204
5.5	Analytical and Numerical Treatment of Secondary Simple Bifurcation Points	232
5.5.1	Analysis of Secondary Simple Bifurcation Points	232
5.5.2	Extension Techniques for Secondary Simple Bifurcation Points	237
5.5.3	Determination of Solutions in the Neighborhood of a Secondary Simple Bifurcation Point	244
5.6	Perturbed Bifurcation Problems	247
5.6.1	Nondegenerate Initial Imperfections.	247
5.6.2	Nonisolated Solutions	252
5.6.3	Solution Curves Through Nonisolated Solutions	267

5.7	Path-Following Methods for Simple Solution Curves	269
5.7.1	Tangent Predictor Methods	269
5.7.2	Arclength Continuation	273
5.7.3	Local Parametrization	275
5.7.4	Detection of Singular Points	280
5.8	Parametrized Nonlinear BVPs from the Applications	288
5.8.1	Buckling of Thin-Walled Spherical Shells	288
5.8.2	A Bipedal Spring-Mass Model	292
5.9	Exercises	295
