

Contents

1	Viscoelastic Relaxation Theory, Momentum and Poisson Equations	1
1.1	Rheological Models	1
1.2	Mathematics	3
1.2.1	The Linear Maxwell Solid	7
1.2.2	Compressible and Incompressible Earth's Models	9
1.2.3	The Correspondence Principle	11
1.3	Expansion in Spherical Harmonics	13
1.3.1	Volume Changes and Surface Forces	15
1.3.2	Spheroidal and Toroidal Deformations	16
1.4	Spheroidal Deformations	18
1.5	Toroidal Deformations	20
1.6	Boundary Conditions	21
1.6.1	The Earth's Surface	21
1.6.2	Chemical Boundaries	25
1.6.3	Core-Mantle Boundary	26
1.7	Elastic and Viscoelastic Solutions	31
1.7.1	Load and Tidal Love Numbers	33
1.7.2	Application of the Correspondence Principle	34
1.8	The Relaxation Spectrum	36
1.8.1	Modal and Non-modal Contributions	41
1.9	The Complex Contour Integration	42
1.10	Point Sources	43
1.10.1	Point Loads	43
1.10.2	Fault Discontinuities	45
	References	50

2	Incompressible and Compressible Analytical Viscoelastic Models	53
2.1	Analytical Solution.	53
2.2	Green Functions for Incompressible and Compressible Stratified Viscoelastic Earth's Models.	53
2.2.1	Core-Mantle Boundary (CMB) Matrix	54
2.2.2	Propagators and Fundamental Matrices	55
2.3	Layered Incompressible Models.	57
2.4	Relaxation Times for Incompressible Earth's Models	62
2.5	The Self-compressed, Compressible Sphere.	68
2.5.1	The Analytical Solution	70
2.5.2	The Relaxation Spectrum of the Self-compressed Compressible Sphere	74
2.5.3	The Compositional Modes.	76
2.6	Viscoelastic Perturbations Due to Surface Loading.	79
2.7	Toroidal Solution.	81
2.8	Time Dependent Loading Love Numbers	82
	References	84
3	Rotational Dynamics of Viscoelastic Planets: Linear Theory	87
3.1	Introduction to Earth's Rotation.	87
3.1.1	Liouville Equations	90
3.2	MacCullagh's Formula	91
3.2.1	Inertia Perturbations Due to Changes in the Centrifugal Potential	94
3.3	Linearized Liouville Equations.	97
3.4	The Concept of True Polar Wander (TPW).	99
3.4.1	Reference Frame	101
3.4.2	Adjustment of the Equatorial Bulge	102
3.5	Developments of Linearized Rotation Theories	103
3.5.1	Comparison Between Different Rotation Theories.	108
3.5.2	Omission of the <i>M0</i> Rotation Mode	109
3.5.3	Analytical Formula for the <i>M0</i> Rotation Mode	112
3.5.4	Unification of the Different Approaches	114
3.6	Non-hydrostatic Bulge Contribution	115
3.7	Readjustment of the Rotational Bulge.	118
3.8	Compressible and Incompressible Readjustment of the Equatorial Bulge.	121
3.9	Long-Term Behavior of the Rotation Equation.	125
3.9.1	Theory for Rotation Changes Due to Mantle Convection	127
3.10	Time-Dependent Inertia Due to Mantle Convection	132
3.10.1	TPW Simulations.	134
3.11	Polar Wander on the Earth, Moon, Mars and Venus.	138
	References	144

Global Dynamics of the Earth: Applications of
Viscoelastic Relaxation Theory to Solid-Earth and
Planetary Geophysics

Sabadini, R.; Vermeersen, B.; Cambiotti, G.

2016, XVI, 358 p. 117 illus., 23 illus. in color., Hardcover

ISBN: 978-94-017-7550-2
