Part I Introduction

1	Features, Principles and Development of Ferroelectric–Gate Field-Effect Transistors	3
	Masanori Okuyama	
1.1	Background of Ferroelectric Memories	3
1.1.1	Historical Background	3
1.1.2	Classification of Non-volatile Ferroelectric Memories	5
1.2	Degradation and Improvement of Memorized States in MFIS Structures	7
1.2.1	Degradation of Memorized States	7
1.2.2	Theoretical Analysis of the Band Profile and Retention Degradation of MFIS Capacitors	9
1.2.3	Calculated Time Dependences of Band Profile and Capacitance of the MFIS Structure	10
1.2.4	Effects of Currents Through the Ferroelectric and Insulator Layers on the Retention Characteristics of the MFIS Structure	11
1.2.5	Methods for Suppressing Leakage Current Through the MFIS Structure	12
1.2.6	Retention Improvement by Heat and Radical Treatments	14
1.3	Improvement of Ferroelectric Gate FETs	15
1.3.1	1T2C-Type FET	15
1.3.2	MFIS FET	16
1.3.3	High-k Insulating Layer	16
1.3.4	New Materials	17
1.4	Conclusion	18
	References	18

Part II Practical Characteristics of Inorganic Ferroelectric-Gate FETs: Si-Based Ferroelectric-Gate Field Effect Transistors

2	Development of High-Endurance and Long-Retention FeFETs of Pt/Ca_ySr_{1-y}Bi₂Ta₂O₉/(HfO₂)_x(Al₂O₃)_{1-x}/Si Gate Stacks.	23
	Mitsue Takahashi and Shigeki Sakai	
2.1	Introduction.	24
2.2	Basic Fabrication Process and Characterization of Pt/SBT/HAO/Si FeFETs	25
2.2.1	Fabrication Process.	25
2.2.2	Static Memory Window	26
2.2.3	Retention	28
2.2.4	Endurance.	29
2.2.5	Writing Speed	30
2.2.6	I_d - V_g and Retention at Elevated Temperatures	31
2.3	Requirements to the Layers in MFIS	33
2.3.1	Requirements to the Layers M, F, I	33
2.3.2	Requirements Especially to the I-and-IL Layers	34
2.4	Preparation of HAO for Pt/SBT/HAO/Si Gate Stack.	35
2.4.1	Single HAO(x) and the MIS Characters at Various Composition Ratios.	35
2.4.2	Comparison of O ₂ and N ₂ Ambient in Depositing HAO	36
2.4.3	Effect of N ₂ Ambient Pressure Increase in Depositing HAO	38
2.5	Nitriding and Oxinitriding Si of MFIS FeFET	41
2.5.1	Direct Nitriding Si for Large Memory Window of FeFET	41
2.5.2	Oxinitriding Si for Improving the Si Interface of FeFET	44
2.6	Using CSBT Instead of SBT in FeFET.	47
2.7	Summary	54
	References	55
3	Nonvolatile Field-Effect Transistors Using Ferroelectric Doped HfO₂ Films	57
	Uwe Schroeder, Stefan Slesazeck and Thomas Mikolajick	
3.1	Introduction.	57
3.2	FeFET Integration	60
3.2.1	Ferroelectric Doped HfO ₂	60
3.2.2	Si Doped HfO ₂	60
3.2.3	Other Doped HfO ₂	61
3.3	Memory Properties of Ferroelectric Hafnium Oxide	62

3.4	Hafnium Oxide Based Ferroelectric Field Effect Transistor	65
3.4.1	Device Performance	65
3.4.2	Device Reliability	68
3.5	Summary and Outlook	69
	References	70

Part III Practical Characteristics of Inorganic Ferroelectric-Gate FETs: Thin Film-Based Ferroelectric-Gate Field Effect Transistors

4	Oxide-Channel Ferroelectric-Gate Thin Film Transistors with Nonvolatile Memory Function.	75
	Eisuke Tokumitsu	
4.1	Introduction.	75
4.2	Features of Ferroelectric Gate Insulator.	76
4.3	Charge Density of ITO Channel FGTs	78
4.4	Electrical Properties of ITO Channel FGTs	79
4.5	Transparent ITO/BLT FGT	82
4.6	ITO-Channel TFTs with High-k Gate Insulator	85
4.7	Conclusions	87
	References	87
5	ZnO/Pb(Zr,Ti)O₃ Gate Structure Ferroelectric FETs.	89
	Yukihiro Kaneko	
5.1	Introduction.	89
5.2	Experimental Procedure	90
5.3	Device Characteristics and Discussions.	91
5.3.1	Basic Characteristics.	91
5.3.2	Correlated Motion Dynamics of Electron Channels and Domain Walls	97
5.3.3	60-nm-Channel-Length FeFET.	104
5.4	Summary	106
	References	107
6	Novel Ferroelectric-Gate Field-Effect Thin Film Transistors (FeTFTs): Controlled Polarization-Type FeTFTs.	111
	Norifumi Fujimura and Takeshi Yoshimura	
6.1	Introduction.	111
6.1.1	Field-Effect Control of Carrier Concentration.	111
6.1.2	Ferroelectric Field-Effect.	113
6.2	Fabrication and Properties of CP-Type FeTFTs	115
6.2.1	Bottom-Gate-Type TFTs (1-a in Fig. 6.1)	115
6.2.2	Impedance Analysis of Channel Conduction Underneath the Bottom-Ferroelectric-Gate Using an RC Lumped Constant Circuit	119
6.2.3	Top-Gate-Type TFTs (2-B in Fig. 6.1)	124

6.3	Effect of Spontaneous Polarization of the Polar Semiconductor on the Electronic Structure of the Poly(Vinylidene Fluoride-Trifluoroethylene)/ZnO Heterostructures	131
6.4	Conclusions	136
	References	136

Part IV Practical Characteristics of Organic Ferroelectric-Gate FETs: Si-Based Ferroelectric-Gate Field Effect Transistors

7	Non-volatile Ferroelectric Memory Transistors Using PVDF and P(VDF-TrFE) Thin Films	141
	Byung-Eun Park	
7.1	Introduction.	141
7.2	Experimental Procedure	143
7.3	Results and Discussion	145
7.3.1	Electrical Properties of the Poly(Vinylidene) (PVDF) Thin Films	145
7.3.2	Electrical Properties of MFSFETs with PVDF Thin Films	147
7.3.3	Electrical Properties of MFSFETs with PVDF-TrFE Thin Films	152
7.4	Conclusions	154
	References	154
8	Poly(Vinylidenefluoride-Trifluoroethylene) P(VDF-TrFE)/Semiconductor Structure Ferroelectric-Gate FETs.	157
	Yoshihisa Fujisaki	
8.1	Introduction.	157
8.1.1	Problem of Oxide/Silicon Based FeFETs.	158
8.1.2	Property of Organic Ferroelectric Material; P(VDF-TrFE)	159
8.2	Ferroelectric Properties of VDF Based Polymers	168
8.2.1	Ferroelectricity of PVDF.	168
8.2.2	Issues that Should Be Solved Before Application.	173
8.2.3	Ferroelectricity of Random Copolymer P(VDF-TrFE)	174
8.3	Ferroelectric P(VDF-TrFE) Gate FeFETs	177
8.3.1	FeFETs Using Inorganic Semiconductors	177
8.3.2	FeFETs Using Organic Semiconductors	180
8.4	Summary	181
	References	182

Part V Practical Characteristics of Organic Ferroelectric-Gate FETs: Thin Film-Based Ferroelectric-Gate Field Effect Transistors

9	P(VDF-TeFE)/Organic Semiconductor Structure	
	Ferroelectric-Gate FETs	187
	Takeshi Kanashima and Masanori Okuyama	
9.1	Introduction.	188
9.1.1	Organic Ferroelectric-Gate FETs	188
9.1.2	PVDF-TeFE Organic Ferroelectrics	189
9.1.3	Organic Semiconductors	191
9.2	Experimental Procedure	192
9.2.1	Preparation of P(VDF-TeFE) Thin Films.	192
9.2.2	Preparation of Organic Semiconductors.	192
9.2.3	Preparation and Characterization Methods for Ferroelectric-Gate FETs	193
9.3	Results and Discussion	193
9.3.1	Basic Properties of Fabricated P(VDF-TeFE) Thin Films	193
9.3.2	Basic Properties of Pentacene and Rubrene Semiconductors	195
9.3.3	P(VDF-TeFE)/Pentacene Ferroelectric-Gate FETs.	196
9.3.4	P(VDF-TeFE)/Rubrene Ferroelectric-Gate FETs.	198
9.4	Conclusions	199
	References	199
10	Nonvolatile Ferroelectric Memory Thin-Film Transistors	
	Using a Poly(Vinylidene Fluoride Trifluoroethylene) Gate	
	Insulator and an Oxide Semiconductor Active Channel	203
	Sung-Min Yoon	
10.1	Introduction.	203
10.2	Choice of Materials	204
10.2.1	Organic Ferroelectric Gate Insulators	204
10.2.2	Oxide Semiconductor Active Channels	205
10.3	Design of Device Structures	205
10.3.1	Design Schemes for Device Operations	205
10.3.2	Typical Device Structure and Characteristics	208
10.4	Process Optimization	209
10.4.1	Lithography Compatible Patterning Process.	209
10.4.2	Interface Protection Layer	211
10.4.3	Oxide Channel Solution Process	211
10.5	Promising Applications.	212
10.5.1	Nonvolatile Flexible Memory	212
10.5.2	Nonvolatile Transparent Memory	213
10.5.3	Low-Power Backplane Device for Display Panel	214

10.5.4	Other Feasible Applications.	215
10.6	Memory Array Integration.	216
10.6.1	Memory Cell Integration Process	216
10.6.2	Disturb-Free Memory Cell Array	216
10.7	Remaining Technical Issues	217
10.7.1	Low-Voltage Operation.	218
10.7.2	Turn-on Voltage Control.	218
10.7.3	Program Speed	219
10.7.4	Data Retention.	219
10.8	Conclusions and Outlook.	220
	References	221

Part VI Practical Characteristics of Organic Ferroelectric-Gate FETs : Ferroelectric-Gate Field Effect Transistors with Flexible Substrates

11 Mechanically Flexible Non-volatile Field Effect Transistor

Memories with Ferroelectric Polymers	227
Richard H. Kim and Cheolmin Park	

11.1	Introduction.	227
11.2	FeFETs with Ferroelectric Polymers.	228
11.2.1	Ferroelectric Polymers	228
11.2.2	Operation Principle of FeFETs.	229
11.3	FeFET on Flexible Substrates	230
11.3.1	Flexible FeFETs with Inorganic Semiconductors	230
11.3.2	Flexible FeFETs with Low Molecule Organic Semiconductors	235
11.3.3	Flexible FeFETs with Polymer Semiconductors	238
11.4	Characterization of Mechanical Properties of a Flexible FeFET.	242
11.4.1	Bending Characteristics.	242
11.4.2	Nano-Indentation	246
11.4.3	Nano-Scratch.	248
11.5	Conclusions	251
	References	251

12 Non-volatile Paper Transistors with Poly(vinylidene fluoride-trifluoroethylene) Thin Film Using a Solution Processing Method.

Byung-Eun Park		
12.1	Introduction.	255
12.2	Experimental Procedure	257
12.3	Results and Discussion	258
12.3.1	P(VDF-TrFE)/Al/Paper Structures	258
12.3.2	P3HT/PVDF-TrFE/Al/Paper Structures	262

12.4 Conclusion	267
References	268

Part VII Applications and Future Prospects

13 Novel Application of FeFETs to NAND Flash	
Memory Circuits	271
Shigeaki Sakai and Mitsue Takahashi	
13.1 Introduction.	271
13.2 Fabrication Process	272
13.3 Test Element Group Characteristics	273
13.3.1 Single Cell Performance	273
13.3.2 Logic Element Performance: NOT-Gates and a Ring Oscillator	274
13.3.3 Test Circuits for Block Selector and Bit-Line Selector	275
13.3.4 Single Cell Self-boost Operations Using a 4×2 Miniature Array	279
13.4 64 Kb Fe-NAND Flash Memory	282
13.4.1 Architecture.	282
13.4.2 Basic Operations	284
13.4.3 Results and Discussion	286
13.5 Conclusion	291
References	292
14 Novel Applications of Antiferroelectrics and Relaxor	
Ferroelectrics: A Material's Point of View	295
Min Hyuk Park and Cheol Seong Hwang	
14.1 Introduction.	295
14.2 Electrostatic Supercapacitors	299
14.3 Electrocaloric Cooling	302
14.4 Pyroelectric Energy Harvesting	303
14.5 IR Sensing	304
14.6 Perspectives	306
14.7 Conclusions	308
