1	Introduction	1
1.1	Interference Coordination in Dynamic Spectrum Access	1
1.1.1	Preliminaries	1
1.1.2	Challenges and Problems	2
1.2	Game-Theoretic Solutions for Interference Coordination	2
1.2.1	Motivation of Applying Game Models	3
1.2.2	A General Framework of Game-Theoretic Solutions	3
1.3	Organization and Summary	6
	References	8
2	Distributed Interference Mitigation in Time-Varying Radio Environment	11
2.1	Introduction	11
2.2	System Model and Problem Formulation	12
2.2.1	System Model	12
2.2.2	Problem Formulation	13
2.3	Interference Mitigation Game in Time-Varying Environment	14
2.3.1	Game Model	14
2.3.2	Analysis of Nash Equilibrium	15
2.4	Achieving NE Using Stochastic Learning Automata	17
2.4.1	Algorithm Description	17
2.4.2	Convergence Analysis	19
2.5	Simulation Results and Discussion	20
2.5.1	Convergence Behavior	21
2.5.2	Performance Evaluation	23
2.6	Concluding Remarks	26
	References	26

3	Game-Theoretic MAC-Layer Interference Coordination with Orthogonal Channels	29
3.1	Introduction.	29
3.2	Motivation, Definition, and Discussion of MAC-Layer Interference	30
3.2.1	Motivation and Definition	30
3.2.2	Discussion on the Impact of Channel Fading.	32
3.3	System Model and Problem Formulation.	33
3.3.1	Bilateral Interference Networks	33
3.3.2	MAC-Layer Interference Minimization	34
3.4	MAC-Layer Interference Minimization Game	36
3.4.1	Graphical Game Model.	36
3.4.2	Analysis of Nash Equilibrium	37
3.5	The Binary Log-Linear Learning Algorithms for Achieving Best NE	39
3.5.1	Algorithm Description	39
3.5.2	Convergence Analysis	41
3.6	Simulation Results and Discussion	41
3.6.1	Scenario Setup.	41
3.6.2	Scenario with No Fading	42
3.6.3	Scenario with Fading	45
3.7	Extension to Unilateral Interference CRNs.	47
3.7.1	System Model.	47
3.7.2	Simulation Results	48
3.8	Concluding Remarks	50
	References	50
4	Game-Theoretic MAC-Layer Interference Coordination with Partially Overlapping Channels.	53
4.1	Introduction.	53
4.2	Interference Models and Problem Formulation	54
4.2.1	MAC-Layer Interference Model with Partially Overlapping Channels	54
4.2.2	Problem Formulation	56
4.3	Graphical Game Model	58
4.3.1	Graphical Game Model.	58
4.3.2	Analysis of Nash Equilibrium	58
4.4	Simultaneous Log-Linear Learning Algorithm with Heterogeneous Rates	60
4.4.1	Algorithm Description	60
4.4.2	Convergence Analysis	60

4.5	Simulation Results and Discussion	63
4.5.1	Scenario Setup.	63
4.5.2	Convergence Behavior	64
4.5.3	Performance Evaluation	66
4.6	Concluding Remarks	70
	References	70
5	Robust Interference Coordination with Dynamic	
	Active User Set	73
5.1	Introduction.	73
5.2	System Model and Problem Formulation.	74
5.2.1	System Model	74
5.2.2	Problem Formulation	74
5.3	Channel Sensing Order Selection Games.	77
5.3.1	State-Based Order Selection Game.	77
5.3.2	Robust Order Selection Game	80
5.3.3	Distributed Learning Algorithm with Dynamic Active User Set	81
5.4	Simulation Results and Discussion	83
5.4.1	Convergence Behavior	83
5.4.2	Throughput Performance.	85
5.5	Concluding Remarks	86
	References	87
6	Future Direction and Research Issues	89
6.1	Hierarchical Games for Small Cell Networks.	89
6.2	Interference Mitigation for Carrier Aggregation	91
