

Contents

1	Overview of the Chinese National Key Basic Research Project Entitled “Development and Evaluation of High-Resolution Climate System Models”	1
1.1	Introduction	1
1.1.1	Demand for the Sustainable Development of Economies and Society	2
1.1.2	Scientific Basis for Climate Change Research	3
1.1.3	Expected Contributions to Solving Problems at the National Level	4
1.2	Objectives	4
1.2.1	General Goals	4
1.2.2	Objectives of the 5-Year Project	4
1.3	Subprojects	5
1.4	Overview of the Project Implementation	7
1.5	Major Achievements	8
1.5.1	Development of a High-Resolution Version of the BCC_CSM Global Climate System Model	8
1.5.2	The Model Evaluation System	17
1.5.3	The MME Coupling Platform	35
1.6	Concluding Remarks	43
	References	45
2	Studies on High-Resolution Atmospheric and Oceanic General Circulation Models	49
2.1	Introduction	49
2.2	Objectives	50
2.3	Major Achievements	50
2.3.1	Improvements of the Dynamical Core of the High-Resolution AGCM	50
2.3.2	Sensitivity of Simulated Climate to Dynamical Cores	53

2.3.3	Preliminary Results from the High-Resolution IAP AGCM4.0	59
2.3.4	CAR Validation and Its Application to Further Improve the Performances of the Original Radiation Transfer Codes	66
2.3.5	The Spread Related to Cloud and Radiation Calculations	72
2.3.6	Dominant Roles of Subgrid-Scale Cloud Structures in Model Differences of Cloud Radiative Effects	73
2.3.7	Incorporation of the CAR System into the Physical Framework of IAP AGCM4	79
2.3.8	A High-Resolution Global Ocean General Circulation Model Based on the Hybrid Coordinate Ocean Model	80
2.3.9	Other Achievements Related to IAP Model Performance	89
2.4	Summary	99
	References	100
3	Studies on the Model Dynamics and Physical Parameterizations of the High-Resolution Version of the Global Climate System	
	Model BCC_CSM	105
3.1	Introduction	106
3.2	Objectives.	107
3.3	Major Achievements	107
3.3.1	Advection Schemes	107
3.3.2	The Parameterization of Gravity Wave Drag.	117
3.3.3	Further Development of the Cumulus Convection Parameterization Scheme	119
3.3.4	Cloud and Its Interaction with Atmospheric Radiation	121
3.3.5	Improvements in the Parameterization of Surface Turbulent Fluxes Between Air and Sea/Sea Ice	131
3.3.6	Parameterizations of Land Surface Processes.	135
3.3.7	Vertical Mixing Processes in the Ocean	142
3.4	Performance	144
3.4.1	The Stability of BCC_CSM	144
3.4.2	Global Distribution of Precipitation	146
3.4.3	Regional Climate Over East Asia	149
3.4.4	SST Over the Tropical Pacific Ocean.	155
3.5	Summary	157
	References	157
4	Development and Testing of a Multi-model Ensemble	
	Coupling Framework.	163
4.1	Introduction	163
4.2	Objectives.	165

4.3	Major Achievements	166
4.3.1	Multi-model Ensemble Coupling Framework	166
4.3.2	Validation of the Multi-model Ensemble Coupling Framework	180
4.3.3	Climate Impact of the Atmospheric Noise Investigated by the IE Model	191
4.3.4	Impacts of Atmospheric Noise on the Relationship Between ENSO and North Pacific SST Investigated by the IE Model	196
4.3.5	The Role of Atmospheric Noise in the NAO with the IE Model	199
4.4	Summary	204
	References	206
5	Metrics for Gauging Model Performance Over the East Asian–Western Pacific Domain	209
5.1	Introduction	209
5.2	Objectives.	210
5.3	Major Achievements	211
5.3.1	Metrics for East Asian Summer Monsoon Simulation.	211
5.3.2	Metrics for East Asian Cloud and Radiation Simulation	221
5.3.3	Tropical Cloud Simulation	228
5.3.4	Processes for Improving Model Performance in ENSO Simulation	231
5.3.5	The Double ITCZ Bias in the Coupled Model.	235
5.3.6	ENSO–Monsoon Relationship Simulated by FGOALS-s2.	238
5.3.7	Decadal Prediction System of FGOALS-gl and FGOALS-s2	245
5.3.8	Other Achievements	249
5.4	Summary	251
	References	253
	Index	257

Development and Evaluation of High Resolution Climate
System Models

Yu, R.; Zhou, T.; Wu, T.; Xue, W.; Zhou, G.

2016, IX, 258 p. 149 illus., 38 illus. in color., Hardcover

ISBN: 978-981-10-0031-7
