Part I Experimental and Numerical Techniques

| | | |
|----------|--|----|
| 1 | Experimental Techniques | 3 |
| 1.1 | The Terminal Ballistics Lab | 3 |
| 1.1.1 | Laboratory Guns | 3 |
| 1.1.2 | Projectiles and Targets | 5 |
| 1.1.3 | Diagnostics for Terminal Ballistics | 7 |
| 1.2 | Determination of the Dynamic Properties | 9 |
| 1.2.1 | Equation of State Measurements | 10 |
| 1.2.2 | Dynamic Strength Measurements | 12 |
| 1.2.3 | Diagnostics | 15 |
| 1.3 | The Common Threats in Terminal Ballistics | 23 |
| 2 | Material Models for Numerical Simulations | 27 |
| 2.1 | General Description | 27 |
| 2.2 | Material Properties | 29 |
| 2.2.1 | The Equation of State | 29 |
| 2.2.2 | The Constitutive Relations | 32 |
| 2.2.3 | Failure of Ductile Materials | 35 |
| 2.2.4 | Failure of Brittle Materials | 42 |
| 2.2.5 | The Spall Failure | 45 |

Part II Penetration Mechanics

| | | |
|----------|---|----|
| 3 | Rigid Penetrators | 51 |
| 3.1 | The Mechanics of Deep Penetration | 51 |
| 3.2 | The Penetration Model for Rigid Long Rods | 61 |
| 3.2.1 | Impact at the Ordnance Velocity Range | 62 |
| 3.2.2 | High Velocity Impact: The Cavitation Phenomenon | 67 |
| 3.3 | The Cavity Expansion Analysis | 75 |

| | | |
|---------------------------------------|---|------------|
| 3.4 | The Penetration of Short Projectiles | 83 |
| 3.4.1 | The Influence of the Entrance Phase | 83 |
| 3.4.2 | A Numerically Based Model for the Entrance Phase Effect | 88 |
| 3.5 | The Impact of Spheres | 95 |
| 3.5.1 | Rigid Sphere Impact | 96 |
| 3.5.2 | The Impact of Non-rigid Spheres | 99 |
| 3.6 | The Effect of Friction | 102 |
| 3.7 | The Optimal Nose Shape | 104 |
| 3.8 | Concrete Targets | 105 |
| 3.9 | The Deep Penetration of Deforming Rods | 114 |
| 3.10 | The Transition to Finite-Thickness Targets | 122 |
| 4 | Plate Perforation | 125 |
| 4.1 | General Description | 125 |
| 4.2 | The Perforation of Ductile Plates by Sharp Nosed Rigid Projectiles | 127 |
| 4.3 | Plate Perforation by Spherical Nosed Projectiles | 145 |
| 4.4 | Plate Perforation by Blunt Projectiles | 148 |
| 4.5 | Forced Shear Localization and Adiabatic Shear Failure | 166 |
| 4.6 | The Perforation of Concrete Slabs by Rigid Projectiles | 169 |
| 4.7 | The Catastrophic Failure of Thin Panels by Hydrodynamic Ram | 179 |
| 5 | Eroding Penetrators | 183 |
| 5.1 | The Penetration of Shaped Charge Jets | 184 |
| 5.2 | The Penetration of Eroding Long Rods | 187 |
| 5.2.1 | The Allen–Rogers Penetration Model | 190 |
| 5.2.2 | The Alekseevskii–Tate Penetration Model | 197 |
| 5.2.3 | The Validity of the AT Model | 203 |
| 5.2.4 | The L/D Effect | 207 |
| 5.2.5 | Other Penetration Models | 211 |
| 5.3 | Scaling Issues in Terminal Ballistics | 216 |
| 5.4 | Penetration at the Hypervelocity Regime | 223 |
| 5.5 | Plate Perforation by Eroding Rods | 227 |
| 5.6 | Perforation of Thin Plates at the Hypervelocity Regime | 234 |
| Part III Defeat Mechanisms | | |
| 6 | Defeat by High Strength Targets | 239 |
| 6.1 | Definitions | 239 |
| 6.2 | Metallic Targets | 240 |
| 6.3 | Ceramics for Armor | 245 |
| 6.3.1 | Ceramics Against AP Projectiles | 245 |
| 6.3.2 | The Interaction of Ceramics with Long Rods | 255 |

| | | |
|----------|---|------------|
| 6.3.3 | Numerical Simulations | 263 |
| 6.3.4 | Ceramics Against Shaped Charge Jets | 271 |
| 6.4 | Woven Fabrics as Armor Materials | 274 |
| 7 | Asymmetric Interactions | 287 |
| 7.1 | Defeating AP Projectiles | 290 |
| 7.2 | Defeating Long Rods | 296 |
| 7.2.1 | Perforation of Inclined Plates | 296 |
| 7.2.2 | Ricochet of Long Rods | 297 |
| 7.2.3 | The Interaction of Long Rods with Moving Plates | 303 |
| 7.2.4 | The Impact of Yawed Rods | 311 |
| 7.3 | Defeating Shaped Charge Jets | 321 |
| 7.3.1 | The Explosive Reactive Armor (ERA) | 321 |
| 7.3.2 | Passive Cassettes | 330 |
| 7.3.3 | The Hole Diameter in a Plate Impacted by a Jet | 334 |
| | References | 341 |

Terminal Ballistics

Rosenberg, Z.; Dekel, E.

2016, XIV, 359 p. 272 illus., 13 illus. in color., Hardcover

ISBN: 978-981-10-0393-6
