1	Introduction.	1
1.1	What Is Aerogel???	1
1.2	How It All Started...	2
1.3	Uniqueness of the Book	3
	References	3
2	Aerogels Today	5
2.1	Introduction.	5
2.2	Aerogels Today	5
2.3	Market Outlook	6
2.4	Silica Aerogels.	7
2.5	Evolution of Silica Aerogels	8
	2.5.1 Formation of Wet Gel	8
	2.5.2 Aging and Fluid Exchange of Wet Gel.	9
	2.5.3 Drying	9
2.6	Concluding Remarks	12
	References	12
3	Fabrication Methods	15
3.1	Introduction.	15
3.2	Silica Aerogel ‘Hybrid’ Composites—Developments and Limitations	15
3.3	Silica Aerogel Binder Composites	17
	3.3.1 Associated Problems	17
3.4	Surface Chemistry of Silica Aerogel Granules	18
3.5	Possible Routes of Binder Composite Fabrication.	20
	3.5.1 Route 1—Resin Binders	20
	3.5.2 Route 2—De-Methylation of Hydrophobic Groups.	20
	3.5.3 Route 3—Water Soluble Materials	21
3.6	Possible Binder Materials	23
	3.6.1 Gelatin	23
	3.6.2 Additives	26

3.7	Materials' Property and Data	28
3.8	Fabrication Methodologies of GSA Composites	29
3.8.1	FM Method.	29
3.8.2	FD Method.	31
3.9	Concluding Remarks	32
	References	33
4	Microstructural Analysis	37
4.1	Introduction.	37
4.2	Hypothesis on Binder Concept.	37
4.3	Chemical Analysis of Gelatin Films	38
4.4	Microstructural Examination of Silica Aerogels and Their Composites	43
4.4.1	SEM/EDX Characterization.	43
4.4.2	XPS/ESCA Surface Characterization	46
4.5	Concluding Remarks	49
	References	49
5	A New Phenomenon—Brittle to Ductile Transition	51
5.1	Introduction.	51
5.1.1	Parametric Model.	52
5.1.2	Direct Experimental Measurements	55
5.2	Experimental Setup	55
5.3	GSA and GSA–SDS Composites (FM Method)	57
5.3.1	Compressive Stress–Strain Behavior (FM Composites).	57
5.3.2	Unusual Phenomenon—Brittle to Ductile Behavior	59
5.3.3	Influence of SDS on Composite Properties from ANOVA.	60
5.3.4	Strain Recovery Optimization via Empirical Models.	64
5.4	Validation of Optimal Properties with GSA–SDS Composites	67
5.4.1	Influence of Silica Aerogel Granules on Mechanical Properties of GSA–SDS Composites	69
5.5	FMWNT-Doped GSA and GSA–SDS Composites (FM)	72
5.5.1	Influence of FMWNT on Composites.	72
5.5.2	Experimental Result—General Trend of Stress–Strain Curves	73
5.5.3	Empirical Analysis of Various Properties	75
5.6	Concluding Remarks	78
	Appendix 5A—Failed Specimen Analysis (FM Method).	79
	References	79

6	Superhydrophobic and Ultralow Thermal Insulation	81
6.1	Introduction	81
6.1.1	Hydrophobicity	82
6.2	Thermal Conductivity Measurements	84
6.3	Operating Temperature of GSA–SDS Composites	87
6.4	Silica Aerogel Granule Size Distribution	88
6.5	Thermal Conductivity of Silica Aerogel Granules	89
6.6	Thermal Conductivity of GSA–SDS Composites	91
6.6.1	Influence of Silica Aerogel Granules on the Thermal Conductivity of GSA–SDS (FD) Composites	93
6.7	Thermal Conductivity of GSA–SDS/FMWNT Composites	94
6.7.1	Optimization and Validation	97
6.8	Thermal Transport Phenomenon in GSA–SDS/FMWNT Composites	98
6.9	Superhydrophobicity of FMWNT doped GSA–SDS Composites	101
6.10	Concluding Remarks	104
	Appendix 6A—Granule Size Distribution	105
	Appendix 6B—Optimization of Coupled Function	106
	References	107
7	Acoustic Performance of Silica Aerogel Composites	109
7.1	Introduction	109
7.2	Experimental Procedure	111
7.2.1	Transfer Function Method (2-microphone)	111
7.2.2	Inferential Transmission Loss (InTLM)	113
7.2.3	Sound Meter Measurements	115
7.3	Silica Aerogel Granules Optimization	115
7.3.1	Transmission Loss of Silica Aerogel Granules	118
7.4	Acoustic Performance GSA–SDS Composites and Other Materials	119
7.4.1	GSA–SDS	120
7.4.2	GSA–SDS/FMWNT Composites	125
7.4.3	‘InTLM’ and Sound Meter	127
7.5	Comparative Analysis with Other Traditional Materials	128
7.5.1	Acoustic Activity	129
7.6	Concluding Remarks	130
	References	131

	Index	135

Silica Aerogel Composites

Novel Fabrication Methods

Sachithanadam, M.; Joshi, S.C.

2016, XII, 139 p. 84 illus., 72 illus. in color., Hardcover

ISBN: 978-981-10-0438-4
