

Contents

1	Introduction to the Finite Element Method	1
2	Rods and Trusses	9
2.1	Introduction	9
2.2	Derivation of the Governing Differential Equation	10
2.2.1	Kinematics	10
2.2.2	Constitutive Equation.	11
2.2.3	Equilibrium	11
2.2.4	Differential Equation	13
2.3	Finite Element Solution	15
2.3.1	Derivation of the Principal Finite Element Equation.	15
2.3.2	Derivation of Interpolation Functions	31
2.3.3	Assembly of Elements and Consideration of Boundary Conditions	35
2.3.4	Post-Computation: Determination of Strain, Stress and Further Quantities	44
2.3.5	Analogies to Other Field Problems	47
2.3.6	Solved Rod Problems	48
2.4	Assembly of Elements to Plane Truss Structures	59
2.4.1	Rotational Transformation in a Plane	59
2.4.2	Solved Truss Problems.	64
2.5	Supplementary Problems.	74
3	Euler–Bernoulli Beams and Frames	89
3.1	Introduction	89
3.2	Derivation of the Governing Differential Equation	92
3.2.1	Kinematics	92
3.2.2	Constitutive Equation.	97
3.2.3	Equilibrium	101
3.2.4	Differential Equation	103

3.3	Finite Element Solution	105
3.3.1	Derivation of the Principal Finite Element Equation.	105
3.3.2	Derivation of Interpolation Functions	114
3.3.3	Assembly of Elements and Consideration of Boundary Conditions	120
3.3.4	Post-computation: Determination of Strain, Stress and Further Quantities	127
3.3.5	Solved Beam Problems	128
3.4	Assembly of Elements to Plane Frame Structures.	153
3.4.1	Rotation of a Beam Element.	153
3.4.2	Generalized Beam Element.	156
3.4.3	Solved Problems	163
3.5	Supplementary Problems.	171
4	Timoshenko Beams	187
4.1	Introduction	187
4.2	Derivation of the Governing Differential Equation	193
4.2.1	Kinematics	193
4.2.2	Equilibrium	194
4.2.3	Constitutive Equation.	195
4.2.4	Differential Equation	196
4.3	Finite Element Solution	203
4.3.1	Derivation of the Principal Finite Element Equation.	203
4.3.2	Linear Interpolation Functions for the Displacement and Rotational Field	210
4.3.3	Higher-Order Interpolation Functions for the Beam with Shear Contribution	222
4.3.4	Solved Problems	227
4.4	Supplementary Problems.	236
5	Plane Elements	241
5.1	Introduction	241
5.2	Derivation of the Governing Differential Equation	242
5.2.1	Kinematics	242
5.2.2	Constitutive Equation.	243
5.2.3	Equilibrium	245
5.2.4	Differential Equation	247
5.3	Finite Element Solution	248
5.3.1	Derivation of the Principal Finite Element Equation.	248
5.3.2	Four-Node Planar Element	252
5.3.3	Solved Plane Elasticity Problems.	258
5.4	Supplementary Problems.	276

6	Classical Plate Elements	279
6.1	Introduction	279
6.2	Derivation of the Governing Differential Equation	280
6.2.1	Kinematics	280
6.2.2	Constitutive Equation	282
6.2.3	Equilibrium	283
6.2.4	Differential Equation	287
6.3	Finite Element Solution	289
6.3.1	Derivation of the Principal Finite Element Equation	289
6.3.2	Rectangular Four-Node Plate Element	292
6.3.3	Solved Classical Plate Element Problems	304
6.4	Supplementary Problems	309
7	Three-Dimensional Elements	311
7.1	Derivation of the Governing Differential Equation	311
7.1.1	Kinematics	311
7.1.2	Constitutive Equation	312
7.1.3	Equilibrium	314
7.1.4	Differential Equation	315
7.2	Finite Element Solution	317
7.2.1	Derivation of the Principal Finite Element Equation	317
7.2.2	Hexahedron Solid Elements	321
7.2.3	Solved Three-Dimensional Element Problems	332
7.3	Supplementary Problems	337
8	Principles of Linear Dynamics	341
8.1	Newton's Laws of Motion	341
8.2	Relationship Between Displacement, Velocity and Acceleration	342
8.3	Solved Problems	343
8.4	Supplementary Problems	348
9	Integration Methods for Transient Problems	351
9.1	Introduction	351
9.2	Derivation of the Governing Differential Equation	351
9.2.1	Kinematics	351
9.2.2	Constitutive Equation	351
9.2.3	Equilibrium	352
9.2.4	Differential Equation	353
9.3	Finite Element Solution	354
9.3.1	Derivation of the Principal Finite Element Equation	354
9.3.2	Consideration of Damping	356
9.3.3	Transient Solution Schemes	360
9.3.4	Solved Problems	366
9.4	Supplementary Problems	370

Appendix A: Mathematics	371
Appendix B: Mechanics	407
Appendix C: Units and Conversion	409
Appendix D: Summary of Stiffness Matrices	413
Appendix E: Answers to Supplementary Problems	421
References	479
Index	483

Computational Statics and Dynamics

An Introduction Based on the Finite Element Method

Öchsner, A.

2016, XX, 485 p. 225 illus., Hardcover

ISBN: 978-981-10-0732-3
