

Contents

1	Introduction to Nanotheranostics	1
1.1	Nanoparticles in General	1
1.1.1	Types of Nanoparticles	1
1.1.2	Importance of Coating or Surface Functionalization for Cellular Internalization	2
	References	5
2	Metallic Nanoparticles for Theranostics	7
2.1	Shape-Controlled Synthesis of Silver and Gold Nanoparticles	7
2.2	Antimicrobial Silver Nanoparticles	9
2.3	Gold Nanoparticles for SERS Detection and Drug Delivery	11
2.4	Effects of Surface Functionalization of Au NPs on Cell Delivery	12
2.4.1	Au–Herceptin Nanoclusters for Nuclear Targeting and Cancer Therapy	13
2.4.2	Au–Peptide NPs as Drug Delivery Vehicles	14
2.5	Silver Nanoparticles for Photo-Activated Gene Silencing	17
	References	19
3	Semiconducting Nanoparticles or Quantum Dots for Theranostics	21
3.1	Synthesis and Preparation	21
3.2	Applications of QDs	22
3.2.1	Intracellular Delivery of QDs	22
3.2.2	In Vivo Imaging with QDs	25
	References	28
4	Magnetic Nanoparticles	31
4.1	Introduction	31
4.2	Synthesis of MNPs	33
4.2.1	Co-precipitation	33
4.2.2	Micro-emulsions	35

4.2.3	Spray Pyrolysis	35
4.2.4	Polyols	35
4.2.5	Thermal Decomposition	36
4.2.6	Chemical Vapour and Plasma Assisted Synthesis	36
4.3	Stabilization of Magnetic Nanoparticles	37
4.3.1	Oxidation	37
4.3.2	Surfactant and Polymer Coating	38
4.3.3	Coating with Precious Metals	39
4.3.4	Silica Coating	39
4.3.5	Carbon Based Coating	41
4.3.6	Composites	43
4.4	Functionalization of the MNPs	48
4.5	Applications of MNPs	50
4.5.1	Non-biomedical Applications	50
4.5.2	Biomedical Applications	51
	References	59
5	Multifunctional Nanoparticles	69
5.1	Other Nanoparticles for Nanotheranostics	71
5.2	Conclusions and Outlook	72
	References	77
