

Contents

1	Introduction	1
1.1	Natural Disasters as Random Walks	2
1.1.1	The Mean First Passage Time (<i>MFPT</i>)	3
1.1.2	Two Common Traits	4
1.2	How to Read This Book	6
1.3	Summary	8
	References	8
2	Background Guide to Random Walk Analysis	11
2.1	Introducing Some Basic Notions	11
2.1.1	Random Processes	11
2.1.2	Random Walks	12
2.1.3	Networks	13
2.1.4	Random Spread Versus Diffusion	16
2.1.5	Transport Characteristics Describing Random Walks	16
2.2	<i>MFPT</i> : A Literature Survey	17
2.2.1	Estimating <i>MFPT</i> Using Random Walks' Transport Characteristics	18
2.2.2	Analysing the Transition Probability Matrix to Estimate <i>MFPT</i>	18
2.2.3	Random Walks in Natural Disaster Dynamics	19
2.3	Some Mathematical Tools	22
2.3.1	Bayesian Probability Theory	22
2.3.2	Markov Matrices	23
2.3.3	Linear Least Square Fitting Technique	24
2.3.4	Monte-Carlo Simulations	25
2.4	Summary	26
	References	26

3	Predicting Cyclone Induced Flood: A Comprehensive	
	Case Study	29
3.1	Introduction	29
3.2	Cyclone Activity: One of the Major Forms of Natural Disasters	30
3.2.1	Numeric Flood Prediction Models	30
3.2.2	The Concept of Geographic Primitives (<i>GPs</i>)	31
3.2.3	Data Assimilation in Flood Prediction Models	32
3.2.4	Predicting Cyclone Induced Rainfall	34
3.2.5	Bayesian Theory for Natural Disaster Prediction	34
3.2.6	Predicting the Spatial Motion of Cyclones	34
3.3	A Comprehensive Model for Cyclone Induced Flood Prediction	35
3.3.1	Step 1: Predict Cyclone Path with Available Data	37
3.3.2	Step 2: Predict Rainfall Density Distribution with Available Data.	40
3.3.3	Step 3: Predict Water Deposit Density Distribution with Available Data.	42
3.4	Two Case Studies	54
3.4.1	Model Summary	59
3.5	Discussion and Conclusions	63
3.6	Summary	64
	Appendix 1: Conversion Between Position and Distance	64
	References	65
4	First Arrival Time for Natural Disasters Modelled as Biased	
	Networks.	67
4.1	Introduction	67
4.2	Predicting Failure Time Using Transport Variables	69
4.2.1	The Fractal Dimension (df)	69
4.2.2	The Walk Dimension (dw)	69
4.2.3	Network Exploration by a Random Walk	70
4.2.4	Assumptions.	71
4.3	Time to Reach in Biased Media	71
4.3.1	Simulated Biased Random Walks	72
4.3.2	Calculating Transport Properties for Each NP	74
4.3.3	Calculating the Walk Dimension (dw)	74
4.4	Case Study: Calculating the Expected Arrival Time for Cyclone Motion Modelled as Biased Random Walks	77
4.4.1	Background	77
4.4.2	The Dataset	80
4.4.3	<i>MFPT</i> Predictions for Case Study	80
4.4.4	Case Study: Discussion	82

4.5	Conclusions	83
4.6	Summary	84
	Appendix 1: A Fire Spread Model Using Huygens Principle	85
	References	86
5	Calculating <i>MFPT</i> for Processes Mapping into Random Walks in Inhomogeneous Networks.	89
5.1	Introduction	89
5.1.1	Random Walks on Inhomogeneous Networks	90
5.1.2	Current Trends in <i>MFPT</i> Estimation in Inhomogeneous Networks	91
5.1.3	Network Partitioning	91
5.2	Network Primitives (NPs).	92
5.2.1	Hop-Wise <i>MFPT</i> Estimation.	93
5.2.2	Identifying Homogeneous NPs	95
5.2.3	Case Study: <i>MFPT</i> for Cyclone Motion.	107
5.2.4	Case Study: Results Comparison.	112
5.3	Conclusions	116
5.4	Summary	116
	References	117
6	Conclusions and Future Research Directions.	119
6.1	Future Research	120
	Appendix 1: Calculating the Walk Dimension (<i>dw</i>) for a Dynamic Network	122
	Glossary	125
	Index	127

Natural Disasters, When Will They Reach Me?

Wijesundera, I.; Halgamuge, M.N.; Nanayakkara, T.;

Nirmalathas, T.

2016, XVIII, 128 p. 46 illus., 37 illus. in color., Hardcover

ISBN: 978-981-10-1111-5
